Howard R. Hughes College of Engineering

Welcome to the Howard R. Hughes College of Engineering! We are confident that you will find UNLV, as well as our College of Engineering, an exciting place to pursue your graduate studies and mature as a researcher. The College of Engineering has played a significant role in helping UNLV develop into a leading research institution in the region. We have created a research and educational environment where our students thrive and grow, resulting in a dynamic community of scholars, encompassing our faculty as well as graduate and undergraduate students.

Graduate students in the College of Engineering study a variety of disciplines: we offer degrees in aerospace, biomedical, civil and environmental, electrical and computer, science, materials, mechanical, and nuclear engineering as well as construction management and computer science. Students have first-class research facilities available to them while studying under the supervision of our faculty, many of whom have won national and international recognition. Our graduate students are involved in all aspects of the research projects our faculty pursue. Some of our current research areas include air and water quality, cybersecurity, nano materials and devices, transportation, renewable energy, sensors and systems for space and national security applications.

Our graduates work in many leading companies, both in the USA and internationally. Some of these students serve in the national laboratories, while others are leading research efforts in some of the best organizations.

As the boundaries of science and engineering continue to expand, UNLV's College of Engineering is committed to offering a variety of competitive programs to our students. We are confident that you will find our graduate programs both challenging and rewarding. We hope that you will join us at UNLV.

Rama Venkat, Ph.D., Interim Dean, Howard R. Hughes College of Engineering
Mohamed Trabia, Ph.D., Associate Dean for Research
Civil and Environmental Engineering

Well-equipped facilities developed by the department faculty include a Computer Assisted Design Laboratory, an Engineering Geophysics Laboratory and Test Site, an Environmental Engineering Laboratory, a Soil and Rock Mechanics Laboratory, the Nevada Universities Transportation Center, and a Water Resources Laboratory. These facilities provide state-of-the-art research tools. Among these are a MTS dynamic testing machine, a triaxial testing apparatus, a large-scale structural load frame, a 50-foot tilting flume, concrete testing facilities, a portable wind tunnel, a broad geophysical test equipment base anchored by a 7,000-lb (3 metric ton) programmable seismic source with 144-channel recording system, PCs, workstations, and current software programs are available within these facilities, with additional facilities being available in the college. Additional assets include access to high speed multiprocessor computers housed in the National Supercomputing Center for Energy and the Environment. Facilities are located in the Thomas Beam Engineering Complex. Additional research facilities nearby include one of twelve national EPA laboratories (located on campus) and the Department of Energy's Nevada Test Site, which has been designated an Environmental Research Park.

Students with backgrounds in civil engineering as well as related disciplines are invited to apply. Students with science backgrounds desiring admission to the graduate program will be required to complete course work, prerequisite or otherwise, that will assure successful completion of the graduate program. Specific course work requirements will depend on the area of specialization desired by the applicant.

Civil Engineering applicants must identify a specialization from one of the following areas: construction, environmental, geotechnical, structural, systems, transportation or water resources. Applications for admission to the program are evaluated by faculty representing each of the respective areas of specialization.

Applications from international students must reach the Graduate College by the dates specified in the catalog in order to be considered for financial aid. Offers of financial aid are made in writing by the department, which assumes no responsibility to provide financial support unless an offer is made in writing. Also, when the department has made an offer to provide financial support, it has no obligation to honor the offer unless the student attends UNLV and enrolls in the Civil and Environmental Engineering and Construction graduate program during the initial semester for which financial aid was offered.

Applicants should notice that some documents must be mailed to the Graduate College while others must be mailed to the Department of Civil and Environmental Engineering and Construction, as outlined below. It is imperative that the documentation is sent to the appropriate location to aid fast processing of the application.

The deadlines for application to the Civil and Environmental Engineering and Construction Department as well as the Graduate College:

**Spring Semester** August 30 for international students and November 15 for domestic students

**Fall Semester** March 15 for international students and June 15 for domestic students

Donald Hayes, Ph.D., Chair
Aly Said, Graduate Coordinator
Chair

Hayes, Donald
Professor; B.S.C.E., M.S.C.E., Mississippi State University; Ph.D., Colorado State University; PE Louisiana and Mississippi. Rebel since 2011.

Graduate Coordinator

Karakouzian, Moses - Full Graduate Faculty
Professor; B.C.E., American University of Beirut; M.S., M.B.A., Ph.D., Ohio State University; P.E., Nevada. Rebel since 1988.

Graduate Faculty

Ahmad, Sajjad - Full Graduate Faculty
Assistant Professor; B.S., University of Engineering and Technology, Lahore, Pakistan; M.E., Asian Institute of Technology, Bangkok, Thailand; Ph.D., University of Western Ontario, London, Ontario, Canada. Rebel since 2006.

Ashley, David - Full Graduate Faculty
Professor; B.S., M.S., MIT; M.S., Ph.D., Stanford. Rebel since 2006.

Batista, Jacimaria Ramos - Full Graduate Faculty
Professor; B.S., Federal University of Ouro Preto; M.S., Montana College of Mineral Science and Technology; Ph.D., Pennsylvania State University. Rebel since 1997.

Ghafoori, Nader - Full Graduate Faculty
Professor; B.S.C.E., Texas Tech University; M.S.C.E., Ph.D., University of Miami. Rebel since 2003.

Gerrity, Daniel - Full Graduate Faculty
Assistant Professor; B.S., M.S., Ph.D., Arizona State University. Rebel since 2012.

James, David E. - Full Graduate Faculty
Associate Professor; A.B., University of California, Davis; M.S., Ph.D., California Institute of Technology. Rebel since 1990.

Kaseko, Mohamed S. - Full Graduate Faculty
Associate Professor; B.S., University of Dares-Salaam; M.S., Cornell University; Ph.D., University of California, Irvine. Rebel since 1993.

Ladkany, Samaan - Full Graduate Faculty
Professor; B.S., American University of Beirut; B.S., M.S., Ph.D., University of Wisconsin, Madison. Rebel since 1984.

Luke, Barbara - Full Graduate Faculty
Professor; A.A., University of Florida; B.S., Ph.D., University of Texas at Austin; M.S., University of California, Berkeley. Rebel since 1995.

Neumann, Edward S. - Full Graduate Faculty
Professor; B.S.C.E., Michigan Technological University; M.S., Ph.D., Northwestern University. Rebel since 1991.

Opfer, Neil - Full Graduate Faculty
Associate Professor; B.S., B.A., B.A., Washington State University; M.B.A., Purdue University; P.D., University of Wisconsin. Rebel since 1989.

Paz, Alexander - Full Graduate Faculty
Assistant Professor; B.S., University of Cauca, Colombia; M.S., University of Puerto Rico, Mayaguez Campus, PR; Ph.D., Purdue University. Rebel since 2008.

Piechota, Thomas - Full Graduate Faculty  
Associate Professor; B.S., Northern Arizona University; M.S., Ph.D., University of California, Los Angeles. Rebel since 1999.

Said, Aly - Full Graduate Faculty  
Assistant Professor; B.S., Ain Shams University, Cairo, Egypt; MScA, Universite de Moncton, Moncton, New Brunswick, Canada; MEng, McMaster University, Hamilton, Ontario, Canada, Ph.D., University of Western Ontario, London, Ontario, Canada. Rebel since 2006.

Shields, David - Full Graduate Faculty  
Associate Professor; B.S., M.S., Texas A & M University; Ph.D., University of Texas at Austin, P.E. (Arizona). Rebel since 2003.

Shrestha, Pramen P. - Full Graduate Faculty  
Assistant Professor; B.S., National Institute of Technology, India; M.S., Oklahoma State University; Ph.D., University of Texas at Austin; P.E. (Texas). Rebel since 2007.

Teng, Hualiang - Full Graduate Faculty  
Assistant Professor; B.S., M.S., Northern Jiaotong University; M.S.C.E., West Virginia University; Ph.D., Purdue University. Rebel since 2004.

Tian, Ying - Full Graduate Faculty  
Assistant Professor; B.S., Hebei Polytechnic University; M.S., Tsinghua University; M.S., Ohio State University; Ph.D., University of Texas at Austin. Rebel since 2007.

Professor Emeriti

Frederick, Gerald R.  
Emeritus Professor; B.S., University of Toledo; M.S., Ph.D., Purdue University. UNLV Emeritus 1993.

Vodrazka, Walter C.  
Emeritus Professor; B.C.E., Manhattan College; M.S., Mississippi State University; Ph.D., Purdue University. UNLV Emeritus 1990.

Emeritus Professor; B.S., Case Western Reserve University; M.S., University of Michigan; Ph.D., University of Arizona. UNLV Emeritus 1969-1992.

Civil and Environmental Engineering and Construction Plans

Master of Science in Engineering - Civil and Environmental Engineering
The Department of Civil and Environmental Engineering & Construction at UNLV offers a number of program degree options leading to the Master of Science in Engineering (M.S.E.) - Civil and Environmental Engineering. Specific areas of engineering that are currently available include Construction, Environmental, Geotechnical, Structural, Transportation, and Water Resources.

Learning Outcomes

www.unlv.edu/degree/ms-civil-engineering

Plan Admission Requirements

In addition to the general requirements for admission to the Graduate College, an applicant for the M.S.E. program must:

Have a bachelor’s degree in engineering or a closely related discipline. Applicants desiring to specialize in environmental engineering who have baccalaureate degrees in the natural sciences may require at least an additional semester of full-time study to complete engineering prerequisite undergraduate course work; this may include fluid mechanics, calculus through differential equations, engineering physics, chemistry and engineering economics. Successful environmental engineering applicants are expected to complete a set of graduate courses in engineering hydrology, hydraulics, statistics, water and wastewater treatment, and wastewater treatment plant design during their graduate study.

Submit a one page Statement of Objectives indicating the area of civil engineering in which they wish to pursue graduate work and the reason they wish to earn a master’s degree.

All applicants are required to take the verbal, quantitative, and analytical writing portions of the GRE General Test and submit the scores to the Civil and Environmental Engineering department. Successful applicants generally have a combined verbal and quantitative GRE score of at least 300 on the new test (1000 on all GRE exams taken before August 2011) and GRE analytical writing score of at least 3.

All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Thesis Track

Total Credits Required: 30

Course Requirements

- Required Course, Ai Credits: 3
  - CEE 700 - Research Methods in Civil and Environmental Engineering
- Elective Courses, Ai Credits: 21
  - Complete 21 credits of advisor-approved elective coursework.
- Thesis, Ai Credits: 6
CEE 797 - Thesis in Civil Engineering

Degree Requirements

- Satisfactory completion of CEE 700 during the first year and 21 credits of approved graduate courses plus six credits of work associated with the master’s level thesis, for a total of 30 credits. The final examination will include a defense of thesis.
- At least 15 credits must be 700-level, of which at least 12 credits must be offered by the College of Engineering.
- The program of study for each student must be approved by the student’s advisory committee.
- Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00), no grades below C and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. Additionally, no more than nine credits below B are allowed in the student’s graduate program. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
- The student’s Advising Committee should be composed of at least four members of the UNLV Graduate Faculty of which at least two must be tenured or tenure-track members of the Department of Civil and Environmental Engineering, the third from the Department of Civil and Environmental Engineering or a related field, and the fourth must be appointed by the Graduate College.
- Each student’s program should show suitable breadth and coherence, as specified in the Graduate Catalog. Prior to filing, the program must receive approval by the student’s committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- Student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Subplan 2 Requirements: Non-Thesis Track

Total Credits Required: 33

Course Requirements

- Required Courses, 33 credits
- Complete 33 credits of advisor-approved graduate coursework.

Degree Requirements

- Satisfactory completion of 33 credits of graduate courses approved by the student’s advisory committee, of which at least 50 percent must be 700-level offered by the College of Engineering.
- The program of study for each student must be approved by the student’s advisory committee.
Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00), no grades below C and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. Additionally, no more than nine credits below B are allowed in the student's graduate program. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.

The student's Advising Committee should be composed of at least four members of the UNLV Graduate Faculty of which at least two must be tenured or tenure-track members of the Department of Civil and Environmental Engineering, the third from the Department of Civil and Environmental Engineering or a related field, and the fourth must be appointed by the Graduate College.

Each student's program should show suitable breadth and coherence, as specified in the Graduate Catalog. Prior to filing, the program must receive approval by the student's committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.

Subplan 3 Requirements: Geographic Information Systems Thesis Track

Total Credits Required: 30

Course Requirements

- Required Courses, 9 credits
  - CEE 668 - GIS Applications in Civil Engineering
  - CS 733 - Geographic Data Base Systems
  - STA 751 - Spatial Statistics
- Applied Concepts Course, 4 credits
  - CEE 768 - Applied Geographic Information Systems
  - EGG 768 - Applied Geographic Information Systems
- Statistics Course, 3 credits
  - STA 667 - Introduction to Mathematical Statistics
  - STA 691 - Statistics for Scientists I
- Research Course, 3 credits
  - CEE 700 - Research Methods in Civil and Environmental Engineering
- Elective Courses, 5 credits
  - Complete 5 credits of advisor-approved elective coursework.
- Thesis, 6 credits
  - CEE 797 - Thesis in Civil Engineering

Degree Requirements

- The Geographic Information Systems Thesis track requires the satisfactory completion of CEE 700 during the first year, 17 credits of required coursework, 4 credits of approved graduate courses and six credits of
work associated with the master’s level thesis, for a total of 30 credits. The final examination will include a defense of thesis.

- At least 15 credits must be 700-level, of which at least 12 credits must be offered by the College of Engineering.
- The program of study for each student must be approved by the student’s advisory committee.
- Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00), no grades below C and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. Additionally, no more than nine credits below B are allowed in the student’s graduate program. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
- The student’s Advising Committee should be composed of at least four members of the UNLV Graduate Faculty of which at least two must be tenured or tenure-track members of the Department of Civil and Environmental Engineering, the third from the Department of Civil and Environmental Engineering or a related field, and the fourth must be appointed by the Graduate College.
- Each student’s program should show suitable breadth and coherence, as specified in the Graduate Catalog. Prior to filing, the program must receive approval by the student’s committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- Student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Subplan 4 Requirements: Geographic Information Systems Non-Thesis Track

Total Credits Required: 33

Course Requirements

- Required Courses, Â¡Credits: 9
  - CEE 668 - GIS Applications in Civil Engineering
  - CS 733 - Geographic Data Base Systems
  - STA 751 - Spatial Statistics
- Applied Concepts Course, Â¡Credits: 4
  - Complete one of the following courses:
    - CEE 768 - Applied Geographic Information Systems
    - EGG 768 - Applied Geographic Information Systems
- Statistics Course, Â¡Credits: 3
  - Complete one of the following courses:
    - STA 667 - Introduction to Mathematical Statistics
    - STA 691 - Statistics for Scientists I
- Elective Courses, Â¡Credits: 17
  - Complete 17 credits of advisor-approved elective coursework.
Degree Requirements

- The Geographic Information Systems Non-Thesis track requires satisfactory completion of 17 credits of required coursework and 16 credits of graduate courses approved by the student's advisory committee, of which at least 50 percent must be 700 level offered by the College of Engineering.
- The program of study for each student must be approved by the student's advisory committee.
- Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00), no grades below C and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. Additionally, no more than nine credits below B are allowed in the student's graduate program. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
- The student's Advising Committee should be composed of at least four members of the UNLV Graduate Faculty of which at least two must be tenured or tenure-track members of the Department of Civil and Environmental Engineering, the third from the Department of Civil and Environmental Engineering or a related field, and the fourth must be appointed by the Graduate College.
- Each student's program should show suitable breadth and coherence, as specified in the Graduate Catalog. Prior to filing, the program must receive approval by the student's committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.

Plan Graduation Requirements

Refer to your subplan for Graduation Requirements.

- Subplan 1: Thesis Track
- Subplan 2: Non-Thesis Track
- Subplan 3: Geographic Information Systems Thesis Track
- Subplan 4: Geographic Information Systems Non-Thesis Track

Master of Science - Construction Management

The Master of Science degree in Construction Management provides graduate-level study for those seeking mid- and upper-level management positions in the construction industry or continued study for the doctorate. Students with degrees in construction management, engineering, science, architecture and business, as well as related disciplines are invited to apply. Applications for admission to the program are evaluated on an individual basis by the program's faculty.

Learning Outcomes

www.unlv.edu/degree/mscm
Plan Admission Requirements

Applicants are considered on an individual basis. Candidates can be admitted on a regular or provisional status. Qualified applicants who are not admitted on either status can take graduate courses as a non-degree student. A maximum of 15 credits taken as a UNLV non-degree graduate student may be applied toward the M.S.C.M. degree.

To be considered for admission:

Applicants must have an earned baccalaureate degree from a regionally accredited four-year college or university with preferred study in construction, engineering, architecture, business, or closely related area.

Overall undergraduate GPA should be at least 2.75 (4.00=A) for the bachelor, Âôs degree or at least 3.00 (4.00=A) for the last two years of undergraduate work.

Credit (in semester hours) must have been earned in the following subjects or their equivalents:

- MATH 181, Ã¢â‚¬Å“Calculus I
- PHYS 151/151L, Ã¢â‚¬Å“General Physics I
- CEM 250/250L, Ã¢â‚¬Å“Construction Materials & Methods
- CEM 270, Ã¢â‚¬Å“Construction Engineering Mechanics
- A course in construction or engineering graphics

The leveling courses required of a student before entering the M.S. program will be determined on an individual basis. The student will be notified in writing of any deficiencies prior to admission to the program. Students with deficiencies exceeding two courses may need to satisfactorily complete them before admission to the graduate program.

The applicant must obtain a satisfactory score on the Graduate Record Examination (GRE) as determined by the Graduate Program Committee (GPC).

Each applicant must submit to the program two letters of recommendation from individuals familiar with their knowledge, skills and abilities, and a one-page Statement of Objectives describing the reasons why they wish to earn a master's degree and indicating the area of concentration within the construction management discipline in which they wish to pursue graduate work.

All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Thesis Track

Total Credits Required: 30
Course Requirements

- **Required Courses**, 13 credits:
  - CEM 651 - Construction Estimating
  - CEM 653 - Construction Scheduling and Resource Optimization
  - CEM 700 - Research Methods in Construction Management
  - MBA 775 - Data Modeling and Analysis

- **Core Course**, 3 credits:
  - Complete one of the following courses:
    - CEM 750 - Advanced Construction Scheduling
    - CEM 751 - Construction Cost Analysis and Estimating

- **Specialty Course**, 3 credits:
  - Complete one of the following courses:
    - CEM 685 - Construction Law and Contracts
    - CEM 740 - Construction Safety and Performance Improvement
    - CEM 775 - Construction Operations and Management
    - CEM 705 - Construction Engineering Management

- **Elective Courses**, 5 credits:
  - Complete 5 credits of elective coursework.

- **Thesis**, 6 credits:
  - CEM 797 - Research Thesis in Construction Engineering and Management

Degree Requirements

- Completion of at least 30 credits, comprised of 18 required 600/700-level credits of CEM and MBA coursework, 6 credits of approved electives, and 6 credits of thesis research. The final examination will include a defense of the thesis.
- MBA 775 and CEM 700 must be completed within the first two semesters of study.
- Other courses may be substituted upon written permission of the student’s graduate faculty advisor. Students who have credit in CEM 451 and CEM 453 or equivalent courses will select two other courses from the approved elective list.
- The thesis option program of study will be jointly developed by the student and advisor, approved by the student’s advisory committee.
- Student pursuing the thesis option shall have an Advising Committee composed of at least four members of the UNLV Graduate Faculty of which at least two must be tenured or tenure-track members of the Construction Management Program, the third from the Construction Management Program or a related field, and the fourth must be appointed by the Graduate College.
- Completion of a thesis requires the student to make a unique contribution to the existing knowledge in the field of construction management or engineering. The effort must include the development of a contemporary research topic and the methodology for investigating the topic. The student is required to undertake the research effort to investigate the topic. The thesis prepared as part of this option shall include a literature review, description of the research topic, methodology, and results, and present conclusions obtained from the research effort and recommendations for further work.
- Each student’s program should show suitable breadth and coherence, as specified in the Graduate Catalog. Prior to filing, the program must receive approval by the student’s committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.
- Students must make satisfactory progress and comply with all Graduate College and Howard R. Hughes College of Engineering policies. If progress is not satisfactory, probation and separation from the graduate program may result, in accordance with the rules of the Graduate College. Satisfactory progress is defined as filing an approved graduate degree program before the completion of 16 credit hours of course work,
completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00), no grades below C and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. Additionally, no more than nine credits below B are allowed in the student's graduate program. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have two semesters to raise it to 3.00 or above. Students who are awarded a graduate assistantship must be enrolled in a minimum of 6 credit hours per semester and must elect the thesis option.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Subplan 2 Requirements: Non-Thesis Track

Total Credits Required: 36

Course Requirements

- Required Courses, Ai Credits: 13
  - CEM 651 - Construction Estimating
  - CEM 653 - Construction Scheduling and Resource Optimization
  - CEM 700 - Research Methods in Construction Management
  - MBA 775 - Data Modeling and Analysis
- Core Course, Ai Credits: 3
  - Complete one of the following courses:
    - CEM 750 - Advanced Construction Scheduling
    - CEM 751 - Construction Cost Analysis and Estimating
- Specialty Course, Ai Credits: 3
  - Complete one of the following courses:
    - CEM 685 - Construction Law and Contracts
    - CEM 740 - Construction Safety and Performance Improvement
    - CEM 775 - Construction Operations and Management
    - CEM 705 - Construction Engineering Management
- Elective Courses, Credits: 14
  - Complete 14 credits of advisor-approved elective coursework.
- Special Project, Credits: 3
  - CEM 796 - Special Project in Construction Engineering and Management

Degree Requirements

- Completion of at least 36 credits comprised of 18 required 600/700-level credits of CEM and MBA coursework, 15 credits of approved electives of which nine credits must be 600/700-level credits of CEM.
- MBA 775 and CEM 700 must be completed within the first two semesters of study.
Other courses may be substituted upon written permission of the student’s graduate faculty advisor. Students who have credit in CEM 451 and CEM 453 or equivalent courses will select two other courses from the approved elective list.

The project option program of study will be jointly developed by the student and advisor.

Completion of a project requires the student to investigate and solve, or propose solutions to, a problem related to the field of construction management. It is expected that the results of this effort will be beneficial for and applied to other construction-related projects or problems. The project report prepared for this option shall include a description of the issue investigated, how the investigation was performed, the results obtained, conclusions regarding the investigation, and recommendations for further work.

Each student’s program should show suitable breadth and coherence, as specified in the Graduate Catalog. Prior to filing, the program must receive approval by the student’s committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Students must make satisfactory progress and comply with all Graduate College and Howard R. Hughes College of Engineering policies. If progress is not satisfactory, probation and separation from the graduate program may result, in accordance with the rules of the Graduate College. Satisfactory progress is defined as filing an proposed graduate degree program before the completion of 16 credit hours of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00), no grades below C and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. Additionally, no more than nine credits below B are allowed in the student’s graduate program. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have two semesters to raise it to 3.00 or above. Students who are awarded a graduate assistantship must be enrolled in a minimum of 6 credit hours per semester and must elect the thesis option.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- Successfully complete a project.

Plan Graduation Requirements

Refer to your subplan for Graduation Requirements.

- Subplan 1 Requirements: Thesis Track
- Subplan 2 Requirements: Non-Thesis Track

Master of Science in Transportation - Transportation

The Master of Science in Transportation degree program is terminal in nature and oriented toward the practice of transportation science, with emphasis on the planning and operations aspects of transportation systems. It is intended for applicants who have backgrounds in areas other than engineering or closely related disciplines, and who either presently work for or aspire to work for transportation agencies or firms.
Learning Outcomes

www.unlv.edu/degree/mst

Plan Admission Requirements

To be considered for admission:

Applicants must have a Bachelor of Science or Bachelor of Arts degree. It is desirable to have a degree in one of the following areas: urban or regional planning, architecture, business, economics, public administration, quantitative geography, computer science, mathematics, operations research, statistics, political science, physical science, or similar discipline.

Undergraduate GPA must be at least 3.00 and credit must have been earned in the following subjects, or equivalent subjects, with a grade of B or better: MAT 180 (3 credits), PHY 155 (4 credits), computer Science or Management Information Systems (3 credits), ECO 201 or ECO 202 (3 credits), and STA 391 or ECO 261 (3 credits). CEE 362 (3 credits) also is required of applicants who have not had at least one year of acceptable experience with a transportation agency.

Submit a two-page Statement of Objectives indicating:

Previous work experience, particularly in transportation.

The reason they wish to pursue the M.S.T. program.

How the degree will be utilized following graduation.

Submit two letters of recommendation from individuals familiar with their skills and abilities. Contact the department for additional information.

Take the verbal, quantitative, and analytical writing portions of the GRE General Test and submit the scores to the Civil and Environmental Engineering department. Successful applicants generally have a combined verbal and quantitative GRE score of at least 300 on the new test (1000 on all GRE exams taken before August 2011) and GRE analytical writing score of at least 3.

All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

The degree offered is a Master of Science in Transportation (M.S.T.). Completion of the degree does not qualify the student with a non-engineering background to sit for the Fundamentals of Engineering (FE) exam.

Plan Requirements

Total Credits Required: 33

Course Requirements

- Required Courses, 6 credits
  - Complete two of the following courses:
    - CEE 609 - Engineering Project Management
• CEE 663 - Traffic Engineering
• CEE 760 - Transportation Planning
• CEE 765 - Public Transportation Systems

• Elective Courses, 24 Credits:
  o Complete 24 credits of advisor-approved elective coursework.
• Project, 3 Credits:
  o CEE 796 - Design Project in Civil Engineering

Degree Requirements

• The program of study for each student must be approved by the student's advisory committee. The degree requires completion of 33 credits including a 3 credit project.
• A minimum of 21 credits must be taken in civil engineering courses, and 12 credits may be taken from other departments.
• The program is highly quantitative in nature and requires aptitude and familiarity with analytic and mathematical reasoning. Course work is rigorous, and students in the program will be taking the same courses offered to engineering students.
• Satisfactory progress is defined as filing an approved program before the completion of 12 credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00), not grades below C and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. Additionally, no more than nine credits below B are allowed in the student's graduate program. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
• The student's Advising Committee should be composed of at least four members of the UNLV Graduate Faculty of which at least two must be tenured or tenure track members of the Department of Civil and Environmental Engineering, the third from the Department of Civil and Environmental Engineering or a related field, and the fourth must be appointed by the Graduate College.

Plan Graduation Requirements

• The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
• Successfully complete a project.

Doctor of Philosophy - Civil and Environmental Engineering

The Department of Civil and Environmental Engineering & Construction at UNLV offers a number of program degree options leading to the Doctor of Philosophy (Ph.D.) - Civil and Environmental Engineering. Specific areas of engineering that are currently available include Construction, Environmental, Geotechnical, Structural, Transportation, and Water Resources.

Learning Outcomes

www.unlv.edu/degree/phd-civil-engineering
Plan Admission Requirements

Admission to the program leading to the Ph.D. in Engineering in the field of Civil and Environmental Engineering is open to those students completing the following requirements:

Application must be made to the Department of Civil and Environmental Engineering. Applications must include all documentation as required by the Graduate College. The Department of Civil and Environmental Engineering will admit the student and supervise the student’s Ph.D. program.

The applicant must have a Master of Science in Engineering degree or equivalent with a major in civil engineering or a closely allied field. Students with non-engineering backgrounds will be required to complete a set of course work requirements that will assure successful completion of the Ph.D. specialization and qualify the student to sit for the Fundamentals of Engineering (FE) exam. Special cases will be decided upon by the Graduate Program Committee (GPC).

The applicant must submit a written statement of purpose indicating interests and objectives in working toward a Ph.D. degree. In addition, three letters of recommendation for Ph.D.-level study must be submitted.

Applicants from countries where English is not the native language must take the Test of English as a Foreign Language, earn scores of at least 213 (computerized) or 550 (written), and submit an official report of the score to the Graduate College.

The GPC will examine the applicant’s academic record and will make the final determination of the applicant’s admissibility to the Ph.D. program. In general, a minimum post-baccalaureate GPA of 3.20 on a 4.00 scale or equivalent is required for admission.

All applicants are required to take the verbal, quantitative, and analytical writing portions of the GRE General Test and submit the scores to the Civil and Environmental Engineering department. Successful applicants generally have a combined verbal and quantitative GRE score of at least 300 on the new test (1000 on all GRE exams taken before August 2011) and GRE analytical writing score of at least 3.

All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Plan Requirements

Total Credits Required: 45

Course Requirements

- Elective Courses: 27 credits
  - Complete 27 credits of advisor-approved elective coursework.
- Dissertation: 18 credits
  - CEE 799 - Dissertation Research
**Degree Requirements**

- A minimum of 27 credit hours of course work beyond the degree of Master of Science in Engineering or equivalent is required (excluding dissertation) with a minimum GPA of 3.00.
- A minimum of 18 of these credits must be 700-level courses.
- In addition to these course requirements, a dissertation consisting of at least 18 credits (CEE 799) is required.
- A Doctoral Advisory Committee composed of at least five members of the UNLV graduate faculty is to be formed for the student. At least three of the committee members must be from tenured or tenure-track members of the Department of Civil and Environmental Engineering, the fourth from the Department of Civil and Environmental Engineering or a related field, and the fifth must be appointed by the Graduate College.
- The student's Doctoral Advisory committee may add additional requirements in accordance with the individual's background and area of study.
- Doctoral students who have not completed CEE 700, or equivalent, or did not write a thesis as part of their Master of Science studies, may be required to complete CEE 700 as a deficiency course. This course will not count towards their doctoral degree program.
- Students whose mother tongue is not English must demonstrate a satisfactory command of the English language by passing the advanced level on the Michigan test during the first year of study.
- In order to show breadth and depth of knowledge in his/her discipline, the doctoral student must pass either a written qualifying exam, an oral qualifying exam, or both as determined by the student's Doctoral Advisory Committee. These examinations are prepared by the faculty and supervised by the GPC. These qualifying exams must be scheduled after the completion of one year of study but not before the completion of at least 12 credits of course work.
- The doctoral student must pass a preliminary exam consisting of the preparation of a written proposal for the dissertation research followed by an oral defense of the proposal. The dissertation must be approved by the student's Doctoral Advisory Committee. Students are advanced to candidacy for the Ph.D. upon the completion of all course work and approval of the dissertation research proposal.
- All requirements for the Ph.D. are met upon the satisfactory completion of the proposed research, the submission of a satisfactory dissertation, and the successful oral defense of the dissertation before the Doctoral Advisory Committee.

**Plan Graduation Requirements**

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her dissertation by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy dissertation to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

**Civil and Environmental Engineering and Construction Courses**

**CEE 604 - Open Channel Flow**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

**CEE 606 - Hydrologic Analysis and Design**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the
course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 609 - Engineering Project Management
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 610 - Highway Construction Materials
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 612 - Advanced Mechanical Properties of Engineering Materials (formerly CEG 611)
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 621 - Professional Engineering Practice
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 632 - Geological Engineering
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 634 - Rock Mechanics
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 635 - Foundations Engineering
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 636 - Engineering Geophysics
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 644 - Steel Structural Design
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).
CEE 650 - Unit Operations/Processes in Environmental Engineering
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 650L - Unit Operations/Processes Laboratory
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 651 - Water and Wastewater Quality Analysis
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 652 - Air Pollution Control Fundamentals
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 654 - Solid and Hazardous Wastes Engineering
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 655 - Chemical Processes for Water Quality Control
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 663 - Traffic Engineering
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 664 - Airport Design
CEE 6 This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 665 - Fire Protection Engineering
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

CEE 666 - Geometric Design of Highways
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

**CEE 667 - Computer Applications in Transportation Engineering**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

**CEE 668 - GIS Applications in Civil Engineering**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

**CEE 676 - Earthquake Engineering**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404). Formerly: CEG 681

**CEE 677 – Design of Underground Structures**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404). Formerly: CEG 683

**CEE 678 - Applied Finite Element Analysis**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

**CEE 680 - Concrete Design**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404). Formerly: CEG 643

**CEE 682 – Design of Timber Structures**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404). Formerly: CEG 648

**CEE 695 - Special Topics**
**Credits 3**
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the
course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

**CEE 700 - Research Methods in Civil and Environmental Engineering**  
**Credits 3**  
Methods to improve and develop research skills and prepare students for professional careers at the graduate level. Includes principles of scientific research, ethics, writing skills, methods for compiling scientific literature, identification of research questions and specific hypotheses, presentation of research results, writing research papers, proposal preparation, preparation of grant proposals, thesis and dissertation.

**CEE 703 – Turbulence**  
**Credits 3**  
Topics include the origin of turbulence, dynamics of turbulent flows, free shear flows, bounded shear flows, transport phenomena, semiempirical theories, statistical descriptions, spectral dynamics. Prerequisites: ME 700 and Graduate standing.

**CEE 704 - Environmental & Water Systems**  
**Credits 3**  
Introduction to techniques to evaluating alternatives in environmental and water resources systems. Topics include southwest U.S. water economic analysis, optimization using linear and dynamic programming, systems modeling using STELLA, analysis of droughts, and current research topics. Applications focus on surface water systems, operation, and reservoirs, water distribution and environmental systems. Prerequisites: CEE 413

**CEE 705 - Fluid Dynamics in Porous Media I**  
**Credits 3**  
Engineering analysis of fluid flows in porous media. Includes development of the basic equations, analysis of steady and unsteady flows, multidimensional flows, analytical solutions using conformal mapping, analog methods, finite difference and finite element modeling, and transport phenomena. Prerequisites: ME 700 or consent of instructor.

**CEE 706 - Fluid Dynamics in Porous Media II**  
**Credits 3**  
Finite element solution of flow problems in porous media. Topics include steady and unsteady saturated flows, unsaturated flows, mass transport problems, and coupled transport problems such as combined mass-thermal flows. Prerequisites: ME 700 or consent of instructor.

**CEE 708 - Hydraulic Transients**  
**Credits 3**  
Analysis of unsteady fluid flow problems in liquid and gas transmission systems of practical interest. Emphasis placed on computer solutions. Topics include methods of characteristics, water-hammer, effect of pumps, turbines, valves, etc.; column separation; control of transient conditions; oscillatory flow and resonance; open channel transient flow. Prerequisites: Graduate standing or consent of instructor.

**CEE 709 - Numerical Methods in Mechanics**  
**Credits 3**  
Numerical solution of partial differential equations arising from problems in mechanics. Emphasis on finite difference techniques. Topics include classification of equations: solutions of elliptic, parabolic, and hyperbolic equations; stability, consistency and convergence and nonlinear equations; multidimensional problems; systems of equations; discontinuous solutions. Prerequisites: MATH 466 or ME 445 or consent of instructor.

**CEE 711 - Continuum Mechanics**  
**Credits 3**  
Matrices and tensors, stress deformation and flow, compatibility conditions, constitutive equations, field equations and boundary conditions in fluids and solids, applications in solid and fluid mechanics. Prerequisites: MATH 431 and graduate standing.

**CEE 722 - Advanced Air Pollution Control**
Credits 3
Fundamental chemical and physical principles of generation and control of air pollutants, and applications to pollution control equipment. Pollutant and particle formation during combustion. Gas absorption and absorption fundamentals and tower/column design. Pollution control strategies. Prerequisites: CEE 452/CEE 652, MATH 432, ME 311, or equivalents. Strongly recommended: ME 314 and MAT 665 or equivalents.

CEE 731 - Pavement Materials and Design
Credits 3
In-depth study of pavement materials such as soils, asphaltic concrete and Portland cement concrete; analytical and empirical methods for design of flexible and rigid pavements; pavement rehabilitation management. Includes highway and airfield pavements. Prerequisites: CEE 334, CEE 334L, CEE 362

CEE 732 - Advanced Foundation Engineering
Credits 3
Detailed study and analysis of the mechanical properties of soils with applications to foundation behavior. Prerequisites: CEE 334, CEE 334L, CEE 435

CEE 734 - Advanced Soil Mechanics
Credits 3
Stress-strain properties and shear strength of soil: settlements and stability analysis. Prerequisites: CEE 334, CEE 334L

CEE 735 - Earth Dams and Embankments
Credits 3
Principles governing the flow of water through soils and their applications to design of earth dams and embankments. Methods of earth dam design, including earthquake design, theory of wells, and groundwater flow. Prerequisites: CEE 334 and CEE 478/CEE 678

CEE 736 - Earth Slopes and Retaining Structures
Credits 3
Analysis and design of stable earth slopes, including slopes cut from natural deposits and engineered embankments. Analysis and design of earth retaining structures. Both theoretical and practical aspects of design discussed. Prerequisites: CEE 334, CEE 334L

CEE 737 - Soil Dynamics and Earthquake Engineering
Credits 3
Use of dynamics in geotechnical engineering, for nondestructive characterization of engineering materials, and for design of foundations subjected to dynamic loads. Geotechnical aspects of earthquake engineering, particularly effect of soils on ground-surface motions, and soil liquefaction during earthquakes. Prerequisites: CEE 334, CEE 334L

CEE 741 - Design of Highway Bridge Structures
Credits 3

CEE 743 - Design of Masonry Structures
Credits 3
Study of the principles of masonry design applied to structural design of building components and retaining walls. Discussion of wind and seismic loadings. Analysis and design of shear walls. Prerequisites: CEE 480 and graduate standing.

CEE 744 - Design of Prestressed/Post-Tensioned Concrete Structures
Credits 3
Study of principles of prestressed concrete, both pre-tensioned and post-tensioned, applied to structural design of buildings and bridges. Discussion of effects of lateral loads on structures. Introduction to analysis and design of shear walls. Discussion of connections between members. **Prerequisites:** CEE 480 and graduate standing.

**CEE 745 - Advanced Topics in Concrete and Steel Structures**
**Credits 3**  
Advanced theoretical analysis and design of reinforced concrete, prestressed and composite steel-concrete structures. Topics include beam torsion, stability of tall columns, local buckling effects, biaxially loaded columns, composite decks, ponding on steel roofs, and introduction to prestressed concrete structures. **Prerequisites:** CEE 480 or consent of instructor.

**CEE 747 - Introduction to Analysis and Design of Plates and Shells**
**Credits 3**  
Introduction to the analysis and design of plates and shell structures. Bending of flat rectangular and circular plates with various boundary and loading conditions. Membrane analysis of spherical, cylindrical shells, and shells of revolution with ring reinforcement. **Prerequisites:** CEE 381 and graduate standing.

**CEE 748 - Advanced Design of Timber Structures**
**Credits 3**  
Study of wood as an engineering material used in various types of construction. Strength properties of timber, structural properties of plywood, analysis and design of timber beams, timber columns, analysis and design of connections using nails, bolts, and adhesives. **Prerequisites:** MATH 431 and any one of CEE 444, 480 or 482.

**CEE 749 - Advanced Topics in Finite Element Analysis**
**Credits 3**  
Properties and applications of isoparametric elements, solids of revolution elements, plate bending elements, finite elements of dynamics, vibrations and buckling instability. Introduction to nonlinear problems using finite element analysis. **Prerequisites:** CEE 478 or consent of instructor.

**CEE 750 - Urban Runoff Quality and Control**
**Credits 3**  
Study of the quality of urban runoff during wet and dry periods. Topics include: review of hydrologic concepts, modeling water quantity and quality in stormwater systems, water quality of non-point sources, control structures or Best Management Practices (BMPs), evaluation of current research, discussion of current regulations. **Prerequisites:** CEE 413 and CEE 450 or consent of instructor.

**CEE 751 - Advanced Topics in Wastewater Engineering**
**Credits 3**  
Fundamentals of aeration and gas transfer, natural systems for effluent polishing, impacts of effluent discharges in natural water systems. Wastewater reuse issues. Sludge management including dewatering, conditioning, composting, and final disposal. **Prerequisites:** Graduate standing and CEE 450/CEE 650 or equivalent.

**CEE 752 - Advanced Water and Wastewater Analysis**
**Credits 3**  
Fundamentals and quantitative analysis or the standard methods used by environmental engineers to analyze drinking water and wastewater and control water quality. Topics include total organic carbon, solids analysis, alkalimetry, UV/VIS spectrophotometry, carbon absorption, ion exchange, AA spectrometry, ion chromatography (IC), phase partitioning, advanced oxidation. **Prerequisites:** CEE 451/CEE 651 and graduate standing, or consent of instructor.

**CEE 753 - Air Pollution Atmospheric Processes**
**Credits 3**  
Fundamentals of aerosol composition, formation and coagulation. Atmospheric photochemistry and atmospheric transport. Computer methods emphasized. Applications to pollution control strategies for urban areas. **Prerequisites:** CS 117, CEE 452/CEE 652 or equivalent, MATH 431.
CEE 754 - Biochemical Wastewater Treatment Fundamentals
Credits 3
Underlying chemical, microbiological, and biochemical principles considered when designing suspended and attached growth biological processes for water quality control. Topics covered include activated sludge design, selector design, filamentous growth control, toxicity to biological systems, biofilm processes, and design of nutrient (phosphorus and nitrogen) removal systems. Prerequisites: CEE 450/CEE 650 or equivalent.

CEE 755 - Advanced Physicochemical Methods for Water Treatment
Credits 3
Fundamentals of chemical equilibrium, ion exchange, chemical kinetics, gas transfer and absorption theory. Applications to design of water treatment facilities, including disinfection basins, ion exchange and activated carbon columns for treatment of water for drinking, agriculture, and industry. Prerequisites: CEE 455/CEE 655 and MATH 431 or equivalent.

CEE 756 - Advanced Waste Treatment Design
Credits 3
Application of optimization methods to the physical, chemical, and biological reaction engineering principles used in air, water, and solid waste treatment plant design. Review and critique of plans for existing treatment works, and incorporation of new technologies. Waste minimization. Prerequisites: CEE 450/CEE 650 or CEE 455/CEE 655 or equivalent.

CEE 757 - Engineering Modeling of Natural Systems
Credits 3
Application of physical, chemical, and ecological concepts to mathematical modelling of fluid mixing, nutrient cycling and population dynamics. Applications to waste treatment and impacts in natural water systems. Prerequisites: CS 117, CEE 450/CEE 650, MATH 431

CEE 758 - Air Quality Modeling
Credits 3
Data requirements for inputs to air quality models. Review of photochemical and transport processes used in models. Influence of local topography and meteorology. Review of photochemical computer models. Use of models in evaluation of strategies for improvement of air quality. Prerequisites: CEE 753 or equivalent; course in numerical methods recommended.

CEE 759 - Mass Transfer in Environmental Systems
Credits 3
Fundamentals of mass transfer by diffusion and advection. Solutions to steady-state and transient problems in several dimensions. Applications to natural and engineered systems. Prerequisites: CEE 367, MATH 432, and ME 400/ME 600 or ME 700, or equivalent, or consent of instructor.

CEE 760 - Transportation Planning
Credits 3
Network representation methods; minimum-path trees; traffic assignment algorithms and their performance; trip distribution models; travel surveys and data needs; applications of statistical methods to develop methods of ownership, trip generation, vehicle occupancy, and model choice. Prerequisites: CEE 362 and graduate standing, or consent of instructor.

CEE 761 - Transportation Demand Analysis
Credits 3
Problems dealing with transportation-systems as they affect travel behavior; study of the demand for transportation theoretical concepts and analytical methods; urban and regional travel demand analysis, forecasting methods and behavioral demand models. Prerequisites: CEE 362 and graduate standing, or consent of instructor.

CEE 762 - Operations Research Applications in Civil Engineering
Credits 3
Analysis of civil engineering systems using operations research methods and techniques. Methods covered include optimization models in deterministic systems, network models, and modeling of stochastic systems, including queuing theory. Applications drawn from various civil engineering contexts, particularly transportation systems.

**Prerequisites:** MATH 466 or STAT 411, or consent of instructor.

**CEE 763 - Advanced Traffic Engineering**
*Credits 3*
Theories of traffic flow and signal operations with application to activated, coordinated, and networked intersections using computerized models such as PASSER, NETSIM, TRANSYT, SOAP, CALSIG. Analysis of arterial/freeway operations techniques including HOV and reverse lanes, ramp metering, freeway surveillance, TSM, demand modification. Evaluation of objectives, measures of effectiveness. **Notes:** Two hours lecture, three hours laboratory.

**Prerequisites:** CEE 463/CEE 663 or consent of instructor.

**CEE 764 - Air Transportation**
*Credits 3*
Nature of civil aviation, aviation system planning, airline operations, aircraft characteristics, airline economics, structure of the airline industry, aircraft fleet planning and scheduling, aviation safety. **Prerequisites:** CEE 362 and graduate standing, or consent of instructor.

**CEE 765 - Public Transportation Systems**
*Credits 3*
Analysis and evaluation of mass transit systems; their operation and management; demand and cost analysis; route design, schedules and fare policy. Technology of transit systems including vehicles and structures. Transit financing. Impact on land use and environment. **Prerequisites:** CEE 362 and graduate standing, or consent of instructor.

**CEE 766 - Analysis of Hazardous Materials Transportation**
*Credits 3*
Hazardous materials transportation analysis using probabilistic risk assessment, including concept measures, models, and methodologies; routing analysis including measures and models, background and scope of hazardous materials transportation issues; mitigation including engineering applications in risk management and emergency preparedness. **Prerequisites:** CEE 362 and graduate standing, or consent of instructor.

**CEE 767 - Human Factors in Transportation Engineering**
*Credits 3*
Application of human factors to transportation system planning, design, operation, and management with emphasis on transportation safety; ergonomic principles; driver, vehicle, and guideway interaction; highway safety problems; human factors analytical methods; engineering and management solutions. **Prerequisites:** CEE 362, or consent of instructor.

**CEE 768 - Applied Geographic Information Systems**
*Credits 4*
Review of data structures and algorithms for surfaces, volumes and time, elevation models, spatial interpolation. Error modeling and data uncertainty. Visualization of spatial data. Decision making in a GIS context. Emphasis on interdisciplinary group project constructing a data base and maps involving several areas of expertise using popular GIS software. **Same as:** EGG 768. **Prerequisites:** EGG 668, STA 751, and CS 733 or CS 432.

**CEE 770 - Shell Structures, Bending and Membrane Theories**
*Credits 3*
Analysis and design of curved thin shell structures using two methods: the approximate membrane force analysis and the exact bending moment and membrane force analysis combined. Introductions provided to the theory of elasticity and specialized solutions to partial differential equations as needed for the analysis of shell structures. **Prerequisites:** CEE 342 and graduate standing.

**CEE 772 - Theory of Composite Structures**
*Credits 3*
Analysis and design of structures using composite materials and sandwich construction. Elasticity and failure theories of fiber composites and laminates discussed, unidirectional, multidirectional and random fiber reinforcement considered. **Prerequisites**: CEE 381 and graduate standing.

**CEE 774 - Introduction to Theory of Elasticity and Plasticity I**  
**Credits 3**  
Introduction to theoretical and applied elasticity and plasticity theory—solutions to engineering problems in structural mechanics and geotechnical engineering. Response of isotropic, orthotropic and layered media to applied stresses and strains. **Prerequisites**: MATH 431 and graduate standing only.

**CEE 775 - Seismic Response of Structures**  
**Credits 3**  
Application of principles of vibration theory to structures. Determination of natural frequencies and mode shapes using classical methods and energy techniques. Response of structures to harmonic, impulse, periodic and earthquake loadings. **Prerequisites**: CEE 381 and graduate standing.

**CEE 776 - Experimental Techniques in Structural Mechanics**  
**Credits 3**  
Application of various experimental techniques to stress analysis problems. Comparison of experimental and analytical methods. Theory of electric resistance strain gages. Brittle lacquer coatings and their photoelasticity and its application including photoelastic coatings. Introduction to similitude. **Prerequisites**: CEE 381 and graduate standing.

**CEE 778 - Theory of Elastic Stability**  
**Credits 3**  
Buckling of centrally loaded and eccentrically loaded compression members. Variational methods of determining critical loads. Stability of rigid frame members, effective lengths of compression members in trusses, lateral buckling of beams, torsional buckling. Buckling of compressed rings and curved bars. **Prerequisites**: CEE 381 and graduate standing.

**CEE 785 - Construction Engineering Management**  
**Credits 3**  
Concepts of construction project management of heavy civil, and capital facility projects. Covers the project phases: pre-project planning, engineering, procurement, construction and start up. **Prerequisites**: Graduate standing in civil engineering or consent of instructor.

**CEE 791 - Independent Study in Civil Engineering**  
**Credits 1 – 3**  
Independent study of a selected civil engineering topic. **Notes**: May be repeated to a maximum of six credits. **Prerequisites**: Graduate standing in civil engineering and consent of instructor.

**CEE 795 - Special Topics in Civil Engineering**  
**Credits 1 – 6**  
Outlet for experimental and other topics of current interest. Topics and credits to be announced. **Notes**: May have a laboratory. May be repeated for credit. **Prerequisites**: Graduate standing in civil engineering and consent of instructor.

**CEE 796 - Design Project in Civil Engineering**  
**Credits 1 – 3**  
Synthesis course to involve students in the design process from analysis and proposal to solution. **Notes**: May be repeated to a maximum of three credits. Not permitted for students pursuing the M.S.E. Thesis option or for those in the Ph.D. Program. **Prerequisites**: Graduate standing in civil engineering and consent of instructor.

**CEE 797 - Thesis in Civil Engineering**  
**Credits 3 – 6**
Notes: May be repeated but only six credits will be applied to program. Grading: S/F grading only. Prerequisites: Graduate standing in civil engineering.

CEE 799 - Dissertation Research
Credits 1 – 6
Research analysis and writing towards completion of dissertation and subsequent defense. Notes: May be repeated with a maximum of 18 credits allowed to be used towards the degree. Grading: S/F grading only. Prerequisites: Graduate standing in Ph.D. program and consent of advisor.

CEM 632 – Temporary Construction Structures
Graduate credit may be obtained for courses designated 600 or above. A full description of this course may be found in the Undergraduate Catalog under the corresponding 400 number. Notes: Credit at the 600 level normally requires additional work.

CEM 651 - Construction Estimating
Credits 4
Principles and procedures used in estimating construction costs. Application of quantity determination, estimate pricing, specifications, subcontractor and supplier solicitation, risk assessment and risk analysis, and final bidding preparation. Computer-based estimating used for semester project. Notes: Credit at the 600 level normally requires additional work.

CEM 653 - Construction Scheduling and Resource Optimization
Graduate credit may be obtained for courses designated 600 or above. A full description of this course may be found in the Undergraduate Catalog under the corresponding 400 number. Notes: Credit at the 600 level normally requires additional work.

CEM 654 – Heavy Construction Equipment & Methods
Characteristics, capabilities, limitations, uses and selection of heavy construction equipment. Construction methods selection. Construction equipment process planning and improvement, fleet operations, and maintenance programs. Field trips. Notes: Credit at the 600 level normally requires additional work.

CEM 680 - Sustainable Construction
Credits 3
Overview of sustainable design and construction. Introduction to green buildings, LEED assessment process, high-performance building, and green building material. Economic analysis of green buildings. Prerequisites: Consent of instructor.

CEM 685 - Construction Law and Contracts
Graduate credit may be obtained for courses designated 600 or above. A full description of this course may be found in the Undergraduate Catalog under the corresponding 400 number. Notes: Credit at the 600 level normally requires additional work.

CEM 693 – Independent Study
Graduate credit may be obtained for courses designated 600 or above. A full description of this course may be found in the Undergraduate Catalog under the corresponding 400 number. Notes: Credit at the 600 level normally requires additional work.

CEM 695 – Special Topics in Construction Management
Graduate credit may be obtained for courses designated 600 or above. A full description of this course may be found in the Undergraduate Catalog under the corresponding 400 number. Notes: Credit at the 600 level normally requires additional work.

CEM 700 - Research Methods in Construction Management
Credits 3
Introduction to research process, design, measurement, sampling, analysis, and results, research information resources, and literature review. Corequisite: MBA 775 or STAT 463 or equivalent or consent of instructor.
CEM 701 - Construction Seminar II
Credits 1
Presentations by students on research studies or projects. Presentations and discussions by local construction industry representatives on current construction engineering and management research and practice topics. **Prerequisites:** CEM 700

CEM 705 - Construction Engineering Management
Credits 3
Technical project management applications for pre-project planning, design, pre-construction services, value engineering, construction, start up/commissioning and decommissioning of capital facilities. **Corequisite:** CEM 451/CEM 651 and CEM 451/CEM 653

CEM 740 - Construction Safety and Performance Improvement
Credits 3
Introduction to construction safety issues, regulations and ways to improve safety on the job site. Accidents and their causes, OSHA regulations, and worker safety programs. Productivity concepts, data collection, and analysis of data and factors affecting construction productivity. Means for improving production and study of productivity improvement programs. **Prerequisites:** CEE 381 or ABS 341, and graduate standing.

CEM 750 - Advanced Construction Scheduling
Credits 3
Models of network theory and non-network theory for construction scheduling. Systems theory, resource leveling and resource algorithms, project diagnostics, optimum workforce/equipment movement, and as-built schedule coordination. Cost control and computer applications, and expert systems. Case studies. **Prerequisites:** CEM 453/CEM 653 and graduate standing.

CEM 751 - Construction Cost Analysis and Estimating
Credits 3
Advanced topics in construction estimating including value engineering, pricing strategies, and computer concepts. Development of estimating data. Computer-aided design and cost integration. Range, factor, and parametric estimating. Production factors. **Prerequisites:** CEM 451 or CEM 651 or consent of instructor.

CEM 755 - Renewable Energy Capital Facility Projects
Credits 3
Overview of control and management of the cost, timing, and value of capital-investment in renewable energy projects such as solar thermal power plants, photovoltaic plants, biomass power plants, biofuel power plants, hydroelectric power plants, geothermal power plants, tidal power station, wave power station and on-shore/off-shore wind power plants. **Prerequisites:** Graduate standing.

CEM 775 - Construction Operations and Management
Credits 3
Theory and practice of construction operations and management. Roles of the designer, owner, constructor, and construction manager. Systems approach to project, firm, and organization issues for construction management. Decision modeling. Readings, case studies, and analysis of construction problems and solutions. Computer applications, case studies. **Notes:** May be taken concurrently with CEM 751. **Prerequisites:** EGG 307, CEM 740, CEM 750, CEM 751

CEM 780 - Construction Engineering
Credits 3
Advanced topics in construction engineering addressing techniques and sequences employed in the construction of heavy and industrial projects. **Prerequisites:** CEE 334 or CEM 330, CEE 381 or CEM 370

CEM 793 - Advanced Independent Study
Credits 1 – 3
Advanced independent study of a selected construction topic. Paper required. **Notes:** May be repeated to a maximum of six credits. **Prerequisites:** Graduate standing and consent of instructor.

**CEM 795 - Advanced Special Topics in Construction Management**  
**Credits:** 1 – 6  
Outlet for experimental and other topics of interest in advanced construction management. Paper required. Topics and credits to be announced. **Notes:** May be repeated to a maximum of six credits. **Prerequisites:** Graduate standing in major.

**CEM 796 - Special Project in Construction Engineering and Management**  
**Credits:** 1 – 3  
Development and undertaking of a project investigating a topic of interest related to construction engineering or construction management. **Notes:** May be repeated for a maximum of three credits. **Prerequisites:** Graduate standing.

**CEM 797 - Research Thesis in Construction Engineering and Management**  
**Credits:** 1 – 3  
Development and undertaking of a research study on a contemporary topic related to construction engineering or construction management. Preparation and presentation of a research thesis. Preparation of a project report. **Notes:** May be repeated for a maximum of six credits. **Prerequisites:** Graduate standing.

**EGG 651 – Ergonomics**  
**Credits:** 3  
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

**EGG 695 - Special Topics**  
**Credits:** 3  
This upper-division engineering course is open to graduate students, provided it demonstrates a level of accomplishment suitable to graduate study. The Undergraduate Catalog should be consulted for a description of the course. In the Undergraduate Catalog, the course is numbered as 4XX, where the XX represents the same last two digits as the 600 course listed (for example, the description for CEE 604 appears under CEE 404).

**EGG 747 - Orthopedic Biomechanics - Lower Extremities and Spine**  
**Credits:** 3  
Biomechanics of the lower extremities and spine; engineering properties and physiology of bone, cartilage, and tendon; analysis of gait; effects of orthopedic impairment and injury; design and surgical implantation of prosthetic joints and fracture fixation devices; engineering of tissue regeneration and replacement. **Same as:** (ME 747). **Prerequisites:** Graduate standing in engineering or kinesiology or consent of instructor.

**EGG 748 - Prosthetic Systems Engineering**  
**Credits:** 3  
Engineering design to prosthetic feet, ankles, knees, and prehension devices; materials and manufacturing; the biomechanics of movement using a prosthesis; residual limb morphology and surgical enhancements; socket design and tissue response; myoelectric devices; microprocessor control; psychophysical and motor control considerations; aspects of clinical science. Emphasis on R&D needs. **Same as:** (ME 748). **Prerequisites:** Graduate standing in engineering or kinesiology or consent of instructor.

**EGG 750 - Analysis of Human Movement**  
**Credits:** 3  
Analysis of the kinematics and kinetics of human movement in two and three dimensions with emphasis on methods used in motion capture, including joint and segment position; acceleration, velocity, force and torque; work and power; and inverse solution methods. **Same as:** (ME 750). **Prerequisites:** Graduate standing in engineering or kinesiology or consent of instructor.
EGG 768 - Applied Geographic Information Systems
Credits 4
Review of data structures and algorithms for surfaces, volumes and time, elevation models, spatial interpolation. Error modelling and data uncertainty. Visualization of spatial data. Decision making in a GIS context. Emphasis on interdisciplinary group project constructing a data base and maps involving several areas of expertise using popular GIS software. Prerequisites: EGG 668, STA 751, and CS 733 or CS 432.

EGG 769 - Applied Modeling with Geographic Information Systems
Credits 3
Design and interfacing of civil engineering models of transportation and finite element, finite difference, and hydrologic models with geographic data base systems. Applications in general air, water, transportation, and land use management. Prerequisites: EGG 768

EGG 795 - Special Topics
Credits 3
Directed research course under the supervision of a member of the graduate faculty culminating in a written paper. Notes: May be repeated twice with permission of instructor and advisor. Prerequisites: Graduate standing and permission of instructor.
Computer Science

The School of Computer Science offers programs leading to the Master of Science and the Doctor of Philosophy degrees in Computer Science. Areas of school strength include both theoretical and experimental computer science, especially within such areas as information and network security, Internet forensics, real-time algorithms, information retrieval, document analysis, graphics, computational geometry, networking and distributed systems, parallel programming, artificial intelligence, and software engineering.

The distributed computing environment of the College of Engineering is housed in the Thomas T. Beam Engineering Complex. Several hundred modern computing systems are operated for purposes of instruction, experimentation, laboratory instrument control, data acquisition, and research. More than 50 of the systems are in public laboratories accessible to all Computer Science students. These laboratories contain both Windows and Unix/Linux clients and servers in a variety of modern configurations.

Students can also obtain permission to access the machines of the National Supercomputer Center for Energy and the Environment (NSCEE).

Laxmi Gewali, Ph.D., Chair
Ajoy Datta, Ph.D., Graduate Coordinator

Chair

Gewali, Laxmi P. - Full Graduate Faculty
Professor; B.S., Gauhati University, India; M.S., Tribhuwan University, Nepal; M.S., Ph.D., University of Texas-Dallas. Rebel since 1989.

Graduate Coordinator

Datta, Ajoy K. - Full Graduate Faculty
Professor; B.S., M.S., Ph.D., Jadavpur University. Rebel since 1988.

Graduate Faculty

Bein, Wolfgang - Full Graduate Faculty
Professor; M.S., Ph.D., University of Osnabruck. Rebel since 1998.

Berghel, Hal - Full Graduate Faculty
Professor; B.A., M.A., Ph.D., University of Nebraska, Lincoln. Rebel since 1999.

Jo, Juyeon - Full Graduate Faculty
Associate Professor; B.S., Dongguk University, Korea; M.S., University of Connecticut; Ph.D., Case Western Reserve University. Rebel since 2006.

Kim, Yoo-hwan - Full Graduate Faculty
Associate Professor; B.A., Seoul National University, Korea; M.S., Ph.D., Case Western Reserve University. Rebel since 2004.

Larmore, Lawrence L. - Full Graduate Faculty
Professor; B.S., Tulane University; Ph.D., Northwestern University; Ph.D., University of California, Irvine. Rebel since 1994.
Minor, John T. - Full Graduate Faculty
Associate Professor; B.A., Rice University; Ph.D., University of Texas, Austin. Rebel since 1985.

Nartker, Thomas A. - Full Graduate Faculty
Professor Emeritus; B.S., University of Dayton; M.S., University of Tennessee; Ph.D., Texas A&M University. Rebel since 1986.

Nasoz, Fatma - Full Graduate Faculty
Assistant Professor; B.S., Bogazici University; M.Sc., University of Central Florida; Ph.D., University of Central Florida. Rebel since 2006.

Pedersen, Jan B. - Full Graduate Faculty
Associate Professor; B.S., M.S., University of Aarhus, Denmark; Ph.D., University of British Columbia. Rebel since 2003.

Stefik, Andreas - Assistant Professor; B.A., Central Washington University; M.S., Washington State University; Ph.D., Washington State University

Taghva, Sidkazem - Full Graduate Faculty
Professor; B.S., Pahlavi University; M.S., University of Kansas; Ph.D., University of Iowa. Rebel since 1987.

Yfantis, Evangelos A. - Full Graduate Faculty
Professor; B.S., University of Athens; M.S., Fairleigh Dickinson University; M.S., Rutgers University; M.S., New Jersey Institute of Technology; Ph.D., University of Wyoming. Rebel since 1979.

Computer Science Plans

Master of Science in Computer Science

Our masters program gives you the opportunity to study different areas, including:

- Design and analysis of algorithms
- Operating and distributed systems
- Computer architecture and networking
- Computational geometry and robotics
- Computer graphics and image processing
- Programming languages and compiler construction
- Artificial intelligence and expert systems
- Database design, document analysis, and retrieval
- Software engineering

Learning Outcomes

www.unlv.edu/degree/ms-computer-science

Plan Admission Requirements

Applicants must submit the following to the Graduate College:

- An application and official transcripts of all college level work with a minimum GPA of 3.00.
• Two letters of recommendation concerning the student’s potential for succeeding in the graduate program.
• Another set of official transcripts.
• The results of the Graduate Record Examination current to within five years should be sent directly to the school.

In addition, applicants must have completed courses and their prerequisites equivalent to our undergraduate Programming Languages (CS 326), Operating Systems (CS 370), Discrete Mathematics II (MATH 351), and Statistical Methods I (STAT 411) with an average grade of B or better.

The Computer Science Admission Committee may elect to admit an outstanding applicant who has not satisfied all of the background requirements on a conditional basis.

All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

The student must complete these requirements before full admission to the program is granted.

Students who have not completed all the following courses (or equivalent courses) as part of their bachelor, Aós degree may be required to complete them as a condition of their admission. If taken as part of their master, Aós degree program, these courses may count toward the 30 credits required.

  o CS 656 - Automata and Formal Languages
  o CS 677 - Analysis of Algorithms
  o CS 660 - Compiler Construction

Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Thesis Track

Total Credits Required: 30

Course Requirements

• Computer Science Courses, Aós Credits: 24
  o Complete 24 credits of 600- or 700- level Computer Science (CS) courses. Students may complete up to 3 credits outside of CS. Outside credits must be related to the student, Aós research area and be approved by the school graduate committee.
• Thesis Credits: 6
  o CS 791 – Thesis

Degree Requirements

• The student must pass at least 30 credits of 600- and 700-level courses with grades of C or better.
• Students must complete 12 credits of 700-level CS courses (excluding thesis).
• Courses in which the student earns a grade lower than C cannot be included in his or her program, and the student, Aós total grade point average (GPA) must be 3.00 or higher while in the program. A student whose GPA falls below 3.00 will be placed on academic probation. That student must have an overall GPA of at
least 3.00 by the end of two subsequent semesters; otherwise the student will be separated from the graduate program. A student on probation will not be allowed to register for CS 690, CS 790, CS 791, CS 792, CS 799, or equivalent courses in another department.

- In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department's discretion. Please see Graduate College policy for committee appointment guidelines.
- The student must submit a thesis conforming to the specifications of the Graduate College and pass a final oral examination covering the thesis and relevant course work.

**Graduation Requirements**

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

**Subplan 2 Requirements: Project Track**

Total Credits Required: 30

**Course Requirements**

- Computer Science Courses, 27 credits:
  - Complete 27 credits of 600- or 700-level Computer Science (CS) courses. Students may complete up to 3 credits outside of CS. Outside credits must be related to the student's research area and approved by the school graduate committee.
- Project, 3 credits:
  - CS 790 - Master, Aós Project

**Degree Requirements**

- The student must pass at least 30 credits of 600- and 700-level courses with grades of C or better.
- Students must complete 15 credits of 700-level CS courses (excluding the project).
- Courses in which the student earns a grade lower than C cannot be included in his or her program, and the student's total grade point average (GPA) must be 3.00 or higher while in the program. A student whose GPA falls below 3.00 will be placed on academic probation. That student must have an overall GPA of at least 3.00 by the end of two subsequent semesters; otherwise the student will be separated from the graduate program. A student on probation will not be allowed to register for CS 690, CS 790, CS 791, CS 792, CS 799, or equivalent courses in another department.
- The student must complete a computer science project and a report approved by his/her advisor and pass a final oral examination over the project and relevant course work.

**Graduation Requirements**

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must successfully complete a master, Aós project.
Plan Graduation Requirements

Refer to your subplan for Graduation Requirements.

- Subplan 1: Thesis Track
- Subplan 2: Project Track

Doctor of Philosophy - Computer Science

The Ph.D. degree is awarded to a candidate who has demonstrated breadth of knowledge in computer science in general and has displayed depth of knowledge in the area of specialty as well as the ability to make original contributions to the body of knowledge in this field.

Learning Outcomes

www.unlv.edu/degree/phd-computer-science

Plan Admission Requirements

Applicants for admission to the Ph.D. program in computer science must meet the following:

- A GPA of 3.70 (on a 4.00 scale) or higher in post-baccalaureate course work is required for admission. Students entering with a bachelor’s degree must have a GPA of 3.5 or higher for the courses at the 200-level or above.
- Students are expected to have a master’s degree in computer science before applying to the Ph.D. program. On rare occasions, an unusually capable student may be admitted to work directly for the Ph.D. degree without having a master’s degree.
- At least three letters of recommendation (preferably from academic sources) attesting to the applicant’s professional competence and academic potential are required.
- A personal statement of purpose, which should be as specific as possible and should include the applicant’s objectives and area(s) of interest, is required.
- A minimum score of 315 on the general test of the Graduate Record Examination (GRE) is required. Official score reports from the last five years are acceptable.
- All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Post-Master's Track

Total Credits Required: 48

Course Requirements

- Required Courses, ÂI Credits: 30
  - Complete 30 credits of 600- or 700- level Computer Science (CS) courses.
- Dissertation, ÂI Credits: 18
  - CS 799 - Dissertation Research
Degree Requirements

- A student entering the Ph.D. program with a master’s degree in computer science is required to take at least 48 credits of coursework.
- At least 24 credits must be in computer science (excluding dissertation).
- A minimum of 12 credits of 700-level Computer Science courses (excluding dissertation)
- A maximum of 12 credits of 600-level Computer Science courses.
- A maximum of 6 credits of 600/700 level non-Computer Science courses (with departmental approval).
- Satisfactorily pass a written comprehensive examination within the first four semesters.
- The written comprehensive examination will be given twice a year. The comprehensives will assess the student’s breadth of knowledge through two examinations covering the six Core Areas listed below and another examination in two other areas of his or her choice.
  - Core Areas:
    - Automata and formal languages; Algorithms and data structures
    - Programming languages; Compiler construction
    - Computer architecture; Operating systems
  - Application Areas:
    - Artificial intelligence
    - Computer graphics and image processing
    - Computer simulation and networks
    - Database systems
    - Software engineering and reliability
    - Document analysis
    - Networks and distributed computing
    - Geometric applications
- The level of the examination is that of 600-level and 700-level courses in each area. A syllabus will be published well in advance of the exams listing the topics to be covered in each exam. Students are expected to take the comprehensive examination within two years of entering the Ph.D. program. All Ph.D. students are urged to take this examination as early as possible. Preference is given in the allocation of student financial support to those who have passed the comprehensive examination. The comprehensive examination may be attempted at most twice. Students who do not pass the comprehensive examination the first time must retake the examination at the next scheduled offering. Failure to pass the comprehensive examination after two attempts will normally lead to dismissal from the Ph.D. program. After passing the comprehensive examination, a research topic of mutual interest to the student and his/her proposed committee is selected. At this point, the student formally begins his/her research study.
- The qualifying examination is an oral examination designed to test the depth of the student’s knowledge in his or her area of research specialization.
  - It must be taken before either:
    - Two years after passing the comprehensive examination or
    - Four years after entering the Ph.D. program.
- It generally focuses on his/her dissertation proposal. The main purpose of this exam is to evaluate the technical merits and feasibility of the student, Âôs proposal for his/her Ph.D. dissertation.
- The student, Âôs Ph.D. committee must conduct the examination. This committee consists of five faculty members of whom one must be from outside the school of computer science. The student, Âôs advisor is the chairperson of this committee. Please see Graduate College policy for committee appointment guidelines.
- The student must prepare a dissertation proposal before taking this examination. The student, Âôs advisor should have already approved this proposal. This proposal must be given to the Ph.D. committee members at least two weeks before the date of the qualifying exam. The proposal must contain a discussion of the background literature on the problem area, description of the specific topic of research proposal approach, feasibility arguments, the objective of the research project, and a list of references.
- The student begins the exam with a presentation of the dissertation proposal. The remaining time is used for discussion and asking questions to determine if the student has sufficient depth of knowledge to carry out the proposed research.
The examination cannot be taken more than twice. After successful completion of the qualifying examination, the student is advanced to candidacy for the doctoral degree.

Satisfactorily pass a dissertation proposal defense by the end of year 4.

The candidate must prepare a dissertation on his or her research. The doctoral dissertation should represent a significant original research contribution to the field of computer science and be publishable in a recognized refereed journal.

After completion of the dissertation, the candidate must pass a final oral defense of his/her dissertation. The candidate must make the final changes, if any, in the dissertation within three months from the date of the oral defense. A candidate can defend the dissertation no more than twice. Each member of the committee must approve the final dissertation.

Maintain a satisfactory rate of progress and a yearly progress report must be submitted. To maintain satisfactory progress in the Ph.D. program a student must:
- Pass the comprehensive examination within 2.50 years of entering the Ph.D. program.
- Maintain a minimum grade point average required by the College of Engineering.
- Pass the qualifying examination within four years of entering the Ph.D. program.
- Maintain satisfactory progress towards research.

Students who enter the Ph.D. program with a master's degree must complete all requirements for the Ph.D. degree within six years. Those who enter the Ph.D. program with a bachelor's degree must complete all requirements for the Ph.D. degree within eight years. If these requirements are not met, the department may place the student on academic probation or drop him/her from the Ph.D. program.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her dissertation by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy dissertation to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Subplan 2 Requirements: Post-Bachelor's - No Master's/Ph.D. Only Track

Total Credits Required: 72

Course Requirements

- Required Courses, Â¬ Credits: 54
  - Complete 54 credits of 600- or 700-level Computer Science (CS) courses.
- Dissertation, Â¬ Credits: 18
  - CS 799 - Dissertation Research

Degree Requirements

- Complete a minimum of 72 credits of coursework with a minimum GPA of 3.00.
- At least 42 credits must be in computer science (excluding dissertation).
- A minimum of 24 credits of 700-level Computer Science courses (excluding dissertation)
- A maximum of 12 credits of 600-level Computer Science courses.
- A maximum of 6 credits of 600/700 level non-Computer Science courses (with departmental approval).
- Satisfactorily pass a written comprehensive examination within the first four semesters.
The written comprehensive examination will be given twice a year. The comprehensives will assess the student's breadth of knowledge through two examinations covering the six Core Areas listed below and another examination in two other areas of his or her choice.

- **Core Areas:**
  - Automata and formal languages; Algorithms and data structures
  - Programming languages; Compiler construction
  - Computer architecture; Operating systems

- **Application Areas:**
  - Artificial intelligence
  - Computer graphics and image processing
  - Computer simulation and networks
  - Database systems
  - Software engineering and reliability
  - Document analysis
  - Networks and distributed computing
  - Geometric applications

The level of the examination is that of 600-level and 700-level courses in each area. A syllabus will be published well in advance of the exams listing the topics to be covered in each exam. Students are expected to take the comprehensive examination within two years of entering the Ph.D. program. All Ph.D. students are urged to take this examination as early as possible. Preference is given in the allocation of student financial support to those who have passed the comprehensive examination. The comprehensive examination may be attempted at most twice. Students who do not pass the comprehensive examination the first time must retake the examination at the next scheduled offering. Failure to pass the comprehensive examination after two attempts will normally lead to dismissal from the Ph.D. program. After passing the comprehensive examination, a research topic of mutual interest to the student and his/her proposed committee is selected. At this point, the student formally begins his/her research study.

The qualifying examination is an oral examination designed to test the depth of the student's knowledge in his or her area of research specialization.

- It must be taken before either:
  - Two years after passing the comprehensive examination or
  - Four years after entering the Ph.D. program.

It generally focuses on his/her dissertation proposal. The main purpose of this exam is to evaluate the technical merits and feasibility of the student's proposal for his/her Ph.D. dissertation.

The student's Ph.D. committee must conduct the examination. This committee consists of five faculty members of whom one must be from outside the school of computer science. The student's advisor is the chairperson of this committee. Please see Graduate College policy for committee appointment guidelines.

The student must prepare a dissertation proposal before taking this examination. The student's advisor should have already approved this proposal. This proposal must be given to the Ph.D. committee members at least two weeks before the date of the qualifying exam. The proposal must contain a discussion of the background literature on the problem area, description of the specific topic of research proposal, feasibility arguments, the objective of the research project, and a list of references.

The student begins the exam with a presentation of the dissertation proposal. The remaining time is used for discussion and asking questions to determine if the student has sufficient depth of knowledge to carry out the proposed research.

The examination cannot be taken more than twice. After successful completion of the qualifying examination, the student is advanced to candidacy for the doctoral degree.

Satisfactorily pass a dissertation proposal defense by the end of year 4.

The candidate must prepare a dissertation on his or her research. The doctoral dissertation should represent a significant original research contribution to the field of computer science and be publishable in a recognized refereed journal.

After completion of the dissertation, the candidate must pass a final oral defense of his/her dissertation. The candidate must make the final changes, if any, in the dissertation within three months from the date of the oral defense. A candidate can defend the dissertation no more than twice. Each member of the committee must approve the final dissertation.
• Maintain a satisfactory rate of progress and a yearly progress report must be submitted. To maintain satisfactory progress in the Ph.D. program a student must:
  o Pass the comprehensive examination within 2.50 years of entering the Ph.D. program.
  o Maintain a minimum grade point average required by the College of Engineering.
  o Pass the qualifying examination within four years of entering the Ph.D. program.
  o Maintain satisfactory progress towards research.
• Students who enter the Ph.D. program with a master’s degree must complete all requirements for the Ph.D. degree within six years. Those who enter the Ph.D. program with a bachelor’s degree must complete all requirements for the Ph.D. degree within eight years. If these requirements are not met, the department may place the student on academic probation or drop him/her from the Ph.D. program.

Graduation Requirements

• The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
• The student must submit and successfully defend his/her dissertation by the posted deadline. The defense must be advertised and is open to the public.
• The student must submit his/her approved, properly formatted hard-copy dissertation to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Subplan 3 Requirements: Post-Bachelor's - Thesis Track

Total Credits Required: 72

Course Requirements

• Required Master’s Courses, 24 Credits
  o Complete 24 credits of 600- or 700-level Computer Science (CS) courses.
• Thesis, 6 Credits
  o CS 791 - Thesis

After successfully completing the requirements above, students are eligible to earn the Master of Science, Computer Science.

• Required Doctoral Courses, 24 Credits
  o Complete 24 credits of 600- or 700-level Computer Science (CS) courses
• Dissertation, 18 Credits
  o CS 799 - Dissertation Research

Degree Requirements

• Complete a minimum of 72 credits of coursework with a minimum GPA of 3.00.
• At least 42 credits must be in computer science (excluding thesis & dissertation).
• A minimum of 24 credits of 700-level Computer Science courses (excluding thesis & dissertation)
• A maximum of 12 credits of 600-level Computer Science courses.
• A maximum of 6 credits of 600/700 level non-Computer Science courses (with departmental approval).
• The student must submit a thesis conforming to the specifications of the Graduate College and pass a final oral examination covering the thesis and relevant course work.
• Satisfactorily pass a written comprehensive examination within the first four semesters.
The written comprehensive examination will be given twice a year. The comprehensives will assess the student’s breadth of knowledge through two examinations covering the six Core Areas listed below and another examination in two other areas of his or her choice.

- **Core Areas:**
  - Automata and formal languages; Algorithms and data structures
  - Programming languages; Compiler construction
  - Computer architecture; Operating systems

- **Application Areas:**
  - Artificial intelligence
  - Computer graphics and image processing
  - Computer simulation and networks
  - Database systems
  - Software engineering and reliability
  - Document analysis
  - Networks and distributed computing
  - Geometric applications

The level of the examination is that of 600-level and 700-level courses in each area. A syllabus will be published well in advance of the exams listing the topics to be covered in each exam. Students are expected to take the comprehensive examination within two years of entering the Ph.D. program. All Ph.D. students are urged to take this examination as early as possible. Preference is given in the allocation of student financial support to those who have passed the comprehensive examination. The comprehensive examination may be attempted at most twice. Students who do not pass the comprehensive examination the first time must retake the examination at the next scheduled offering. Failure to pass the comprehensive examination after two attempts will normally lead to dismissal from the Ph.D. program. After passing the comprehensive examination, a research topic of mutual interest to the student and his/her proposed committee is selected. At this point, the student formally begins his/her research study.

The qualifying examination is an oral examination designed to test the depth of the student’s knowledge in his or her area of research specialization.

It must be taken before either:

- Two years after passing the comprehensive examination or
- Four years after entering the Ph.D. program.

It generally focuses on his/her dissertation proposal. The main purpose of this exam is to evaluate the technical merits and feasibility of the student’s proposal for his/her Ph.D. dissertation.

The student’s Ph.D. committee must conduct the examination. This committee consists of five faculty members of whom one must be from outside the school of computer science.   o Maintain a minimum grade point average required by the College of Engineering.
  o Pass the qualifying examination within four years of entering the Ph.D. program.
  o Maintain satisfactory progress towards research.
• Students who enter the Ph.D. program with a master's degree must complete all requirements for the Ph.D. degree within six years. Those who enter the Ph.D. program with a bachelor's degree must complete all requirements for the Ph.D. degree within eight years. If these requirements are not met, the department may place the student on academic probation or drop him/her from the Ph.D. program.

Graduation Requirements

• The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her master's degree requirements.
• The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
• The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.
• The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her doctoral degree requirements.
• The student must submit and successfully defend his/her dissertation by the posted deadline. The defense must be advertised and is open to the public.
• The student must submit his/her approved, properly formatted hard-copy dissertation to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Subplan 4 Requirements: Post-Bachelor's - Project Track

Total Credits Required: 72

Course Requirements

• Required Master's Courses, 27 credits:
  o Complete 27 credits of 600- or 700-level Computer Science (CS) courses.
• Project, 3 credits:
  o CS 790 - Master's Project

After successfully completing the requirements above, students are eligible to earn the Master of Science in Computer Science.

• Required Doctoral Courses, 24 credits:
  o Complete 24 credits of 600- or 700-level Computer Science (CS) courses
• Dissertation, 18 credits:
  o CS 799 - Dissertation Research

Degree Requirements

• Complete a minimum of 72 credits of coursework with a minimum GPA of 3.00.
• At least 42 credits must be in computer science (excluding dissertation).
• A minimum of 24 credits of 700-level Computer Science courses (excluding dissertation)
A maximum of 12 credits of 600-level Computer Science courses.
A maximum of 6 credits of 600/700 level non-Computer Science courses (with departmental approval).
The student must complete a computer science project and a report approved by his/her advisor and pass a final oral examination over the project and relevant course work.
Satisfactorily pass a written comprehensive examination within the first four semesters.
The written comprehensive examination will be given twice a year. The comprehensives will assess the student's breadth of knowledge through two examinations covering the six Core Areas listed below and another examination in two other areas of his or her choice.

Core Areas:
- Automata and formal languages; Algorithms and data structures
- Programming languages; Compiler construction
- Computer architecture; Operating systems

Application Areas:
- Artificial intelligence
- Computer graphics and image processing
- Computer simulation and networks
- Data base systems
- Software engineering and reliability
- Document analysis
- Networks and distributed computing
- Geometric applications

The level of the examination is that of 600-level and 700-level courses in each area. A syllabus will be published well in advance of the exams listing the topics to be covered in each exam. Students are expected to take the comprehensive examination within two years of entering the Ph.D. program. All Ph.D. students are urged to take this examination as early as possible. Preference is given in the allocation of student financial support to those who have passed the comprehensive examination. The comprehensive examination may be attempted at most twice. Students who do not pass the comprehensive examination the first time must retake the examination at the next scheduled offering. Failure to pass the comprehensive examination after two attempts will normally lead to dismissal from the Ph.D. program. After passing the comprehensive examination, a research topic of mutual interest to the student and his/her proposed committee is selected. At this point, the student formally begins his/her research study.

The qualifying examination is an oral examination designed to test the depth of the student's knowledge in his or her area of research specialization.
- It must be taken before either:
  - Two years after passing the comprehensive examination or
  - Four years after entering the Ph.D. program.
- It generally focuses on his/her dissertation proposal. The main purpose of this exam is to evaluate the technical merits and feasibility of the student's proposal for his/her Ph.D. dissertation.
- The student's Ph.D. committee must conduct the examination. This committee consists of five faculty members of whom one must be from outside the school of computer science. The student's advisor is the chairperson of this committee. Please see Graduate College policy for committee appointment guidelines.

The student must prepare a dissertation proposal before taking this examination. The student's advisor should have already approved this proposal. This proposal must be given to the Ph.D. committee members at least two weeks before the date of the qualifying exam. The proposal must contain a discussion of the background literature on the problem area, description of the specific topic of research proposal approach, feasibility arguments, the objective of the research project, and a list of references.

The student begins the exam with a presentation of the dissertation proposal. The remaining time is used for discussion and asking questions to determine if the student has sufficient depth of knowledge to carry out the proposed research.

The examination cannot be taken more than twice. After successful completion of the qualifying examination, the student is advanced to candidacy for the doctoral degree.
Satisfactorily pass a dissertation proposal defense by the end of year 4.
The candidate must prepare a dissertation on his or her research. The doctoral dissertation should represent a significant original research contribution to the field of computer science and be publishable in a recognized refereed journal.

After completion of the dissertation, the candidate must pass a final oral defense of his/her dissertation. The candidate must make the final changes, if any, in the dissertation within three months from the date of the oral defense. A candidate can defend the dissertation no more than twice. Each member of the committee must approve the final dissertation.

Maintain a satisfactory rate of progress and a yearly progress report must be submitted. To maintain satisfactory progress in the Ph.D. program a student must:

- Pass the comprehensive examination within 2.50 years of entering the Ph.D. program.
- Maintain a minimum grade point average required by the College of Engineering.
- Pass the qualifying examination within four years of entering the Ph.D. program.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements for both the master's and doctoral portions of the program.
- The student must successfully complete a master's degree.
- The student must submit and successfully defend his/her dissertation by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy dissertation to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Plan Graduation Requirements

Refer to your subplan for Graduation Requirements.

- Subplan 1: Post-Master's Track
- Subplan 2: Post-Bachelor's - No Master's/Ph.D. Only Track
- Subplan 3: Post-Bachelor's - Thesis Track
- Subplan 4: Post-Bachelor's - Project Track

Computer Science Courses

CS 617 - Introduction to Computer Simulation
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 620 - Human-Computer Interaction
Credits 3
Overview of human-computer interaction principles, guidelines, methods, and tools. User research, low-fidelity prototyping, participatory design, usability evaluation, visual design, usability principles, and affordances. Graphical user interface implementation, including design patterns, event handling, widget tool kits, languages, and development environments. Prerequisites: Consent of Instructor
CS 641 - Advanced Internet Programming
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 641L - Advanced Internet Programming Lab
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 645 - Internet Security
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 648 - Computer Security
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 651 - Multimedia Systems Design
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 651L - Multimedia Systems Design Lab
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 656 - Automata and Formal Languages
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 657 - Database Management Systems
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 660 - Compiler Construction
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 663 - Computer Architecture
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 665 - Computer Networks I
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 666 - Computer Networks II
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 669 - Introduction to Digital Image Processing
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 670 - Networks and Distributed Systems
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.
CS 671 - Program Derivation
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 672 - Software Product Design and Development I
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 673 - Software Product Design II
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 674 - Decision Environments for Software Product Development
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 677 - Analysis of Algorithms
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 680 - Computer Graphics
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 682 - Artificial Intelligence
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 689 - Advanced Computer Science Topics
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 690 - Independent Study
This course may also be used for graduate credit. For a description of this 600-level course, please consult the current Undergraduate Catalog, where it is listed as a 400-level class.

CS 715 - Advanced Analysis of Algorithms
Credits 3
Analysis of the complexity and correctness of asymptotically efficient algorithms, including set partitioning, matrix multiplication, integer multiplication and pattern matching algorithms. The theory of NP-completeness; Cook's theorem and polynomial transformations. Basic NP-complete problems, such as the three-satisfactory, three dimensional matching and Hamiltonian circuit problems. PSPACE-completeness results, such as quantified Boolean formulas. Prerequisites: CS 656 and CS 677

CS 717 - Advanced Computer Simulation
Credits 3
Advanced discrete simulation modeling using SIMSCRIPT 11.5 and SLAM. Advanced continuous simulation using ACSL. Modeling concepts, measuring random phenomena. Passive objects, application of simulation to operating systems and software design in general. Digital- analog solution of linear differential equations, industrial dynamics. Feedback systems. Prerequisites: CS 617

CS 718 - Theory of Computation
Credits 3
Computability of functions and sets in terms of Turing machines and other computational models. Universal Turing machines and examples of unsolvable problems. Introduction to other computational models, such as the lambda-
calculus, Post systems, Markov algorithms and recursive function theory. The Church-Turing thesis and proofs of equivalence between the models. **Prerequisites:** CS 656

**CS 719 - Advanced Automata and Formal Languages**
**Credits:** 3
Extensive study of context-sensitive, recursive and recursively enumerable languages, including ambiguity and closure properties: decidable and undecidable properties of the different language classes: the halting problem and Post’s correspondence problem; properties of the deterministic context-free languages; LR(k) and LL(k) grammars. **Prerequisites:** CS 656

**CS 733 - Geographic Data Base Systems**
**Credits:** 3
Spatial data types and operators: point queries, range queries, translation, rotation, and scaling. Data structures for object representation: arc tree, quadtrees. Commercial data bases vs. spatial data bases: relational, hierarchical, network. **Notes:** (May not be used to satisfy degree requirements in Computer Science.). **Prerequisites:** CS 135 or CS 117 or equivalent and STAT 611

**CS 740 - Statistical Pattern Recognition**
**Credits:** 3
Concepts and formal theoretical structures necessary for design and implementation of a pattern recognition system. Topics include: parametric and non-parametric methods, linear and non-linear classifiers and clustering algorithms. **Prerequisites:** STA 667, MATH 253 or 265, and CS 302

**CS 741 - Structural Pattern Recognition**
**Credits:** 3
Survey of advanced pattern recognition techniques. Topics include: graph matching methods, syntactic approaches, neural nets, and context-dependent methods. **Prerequisites:** CS 656 and CS 677

**CS 742 - Document Image Understanding**
**Credits:** 3
Survey of document understanding methods and related topics that include: data compression, document exchange standards, layout analysis methods, logical analysis methods, OCR, error correction, and document routing. **Prerequisites:** CS 740 and CS 669

**CS 747 - Cryptography and Information Theory**
**Credits:** 3
Cryptography, cryptographic systems, encryption algorithms, cryptographic techniques, access control, lattice model of information flow, flow control mechanisms, inference control mechanisms, mechanisms restricting noise, mechanisms restricting statistics, statistical database models. **Prerequisites:** CS 370, STAT 411

**CS 750 - Computational Algorithms in VLSI**
**Credits:** 3
Application and inherent limitations of using VLSI to implement computational algorithms, design and analysis of algorithms for design of VLSI circuits, introduction to VLSI implementation of computational algorithms represented by logic circuits, lower bounds on area and time, systolic arrays and their applications, VLSI layout algorithms, VLSI test generation and simulation. **Prerequisites:** CS 677

**CS 754 - Discrete Optimization**
**Credits:** 3
Network optimization problems, use of advanced data structures. Topics may vary and include maximum-flow algorithms, multiterminal maximum flows, minimum cost flows and circulations, matching algorithms, approximation algorithms, and applications. Hamiltonian circuits in dense graphs, disjoint paths, the postman problem, introduction to combinatorial geometry, and linear programming. **Prerequisites:** CS 677

**CS 756 - Formal Semantics**
**Credits:** 3
Coverage of formal methods for defining the semantics of programming languages, including the operational, denotation and axiomatic approaches. Proof techniques for verifying properties of programs. Consistent and complementary definitions for a Pascal-like language discussed. **Prerequisites:** CS 326 and CS 656

**CS 758 - Computational Geometry**  
**Credits 3**  
Geometric searching, point location, range searching, convex hull, Graham’s scan, gift wrapping, dynamic convex hull, proximity closest pair, Voronoi diagram, triangulation. Intersection, visibility shortest paths, geometry of rectangles. **Prerequisites:** CS 677

**CS 763 - Advanced Computer Architecture**  
**Credits 3**  
Advanced study of various current computer architectures. Examples taken from specialized architectures that support modern general-purpose programming, operating systems, artificial intelligence and data bases. SIMD and MIMD parallel architectures. **Prerequisites:** CS 326 and CS 663

**CS 767 - Advanced Computer Graphics**  
**Credits 3**  
Hidden line elimination algorithms and implementation. Perfect interpolators, cubic and bicubic splines, Kriging, Hermite surfaces, nonperfect interpolators, Bezier curves and surfaces, B-splines, ray tracing algorithms, shading, lightness, motion, moving pictures, two- and three- dimensional fractals. Special topics. **Prerequisites:** CS 680

**CS 768 - Surface Estimation for Computer-Aided Geometric Design**  
**Credits 3**  
Affine maps, function spaces, the DeCasteljan algorithm, Bernstein polynomials, Bezier surfaces, nonparametric curves, Lagrange polynomials, C continuity, B-spline basis, Frenet frame, G continuity, gamma splines, beta splines, geometric continuity, tensor product interpolants, volume deformations, curvatures. **Prerequisites:** CS 767

**CS 769 - Advanced Data Base Management**  
**Credits 3**  
Continuation of CS 632, including normalization of relational data bases using functional and multivalued dependencies. Query processing, query interpretation, query optimization, and methods for implementing and optimizing logic queries. Knowledge data bases, distributed data bases and object-oriented data bases. **Prerequisites:** CS 657

**CS 770 - Advanced Operating Systems**  
**Credits 3**  
Study of the design principles, organization, and performance analysis of large-scale computer operating systems. Particular subjects emphasized include coordination of tasks, solutions of deadlock problems, theories of segmentation and paging, and performance prediction. **Prerequisites:** CS 370

**CS 771 - Concurrent Computation**  
**Credits 3**  
Study of concurrent programming methods and applications; event spaces; models of concurrency, such as Petri nets, CCS and CSP. Synchronization, data sharing and communication. Concurrency constructs in various programming languages. Scheduling and implementation techniques. Applications of concurrency in operating system design, fault-tolerance, and reliability. **Prerequisites:** CS 326 and CS 370.

**CS 772 - Software Architecture**  
**Credits 3**  
Survey of advanced techniques for specifying and designing large software systems. System verification. Reliability and project management. **Prerequisites:** CS 370, CS 672, and CS 660, or consent of instructor.

**CS 777 - Parallel Algorithms**  
**Credits 3**
Methods for creating and analyzing parallel algorithms. Parallel programming languages and programming models of shared-memory and distributed architectures. Measuring complexity of parallel algorithms. NC-class versus P-class algorithms. **Prerequisites:** CS 677

**CS 778 - Advanced Translation**  
**Credits 3**  
Formal semantics, automatic compiler generation, attribute grammars. Language issues as they relate to compiler generation. **Prerequisites:** CS 660

**CS 779 - Supercompilers for Parallel and Vector Computers**  
**Credits 3**  
Dependence analysis, Diophantine equations, the GCD test, the Banerjee test, do-loop normalization, concurrency in loops, vector code generation, control dependence and vectorization, parallel code generation for doall-loops, parallel code generation for doacross-loops, shared memory parallelization, parallelization for distributed memory architectures. **Prerequisites:** CS 778

**CS 780 - Distributed Computing and Algorithms**  
**Credits 3**  
Methods and algorithms of distributed computing. Topics may include architecture and design goals, formal approaches to distributed computing problems, networks and protocols, models of distributed computing, synchronization and communication, synchronous and asynchronous systems, fault-tolerance and reliability, self-stabilization, distributed algorithms and applications. **Prerequisites:** CS 370, CS 677

**CS 781 - Automated Deduction**  
**Credits 3**  
Use of computers for forming deductions and proving theorems in symbolic logic covered. Topics include resolution, unification, proof strategies, and equality. Also examines areas of application: problem solving, question answering, program verification, automatic programming and logic programming (Prolog). **Prerequisites:** CS 682

**CS 782 - Expert System Construction**  
**Credits 3**  
Design, organization, and construction of expert systems. Includes general concepts, characteristics, elements, advantages, and examples of expert systems. Also rule-based knowledge representations, inference techniques, implementation tools and shells, and advanced topics. **Prerequisites:** CS 682

**CS 783 - Genetic Algorithms and Neural Networks**  
**Credits 3**  
A study of the utility of adaptive methods and their limitations across optimization problems spanning areas of engineering. Topics include genetic algorithms and genetic programming, simulated annealing, tabu search, neural networks, artificial life. Use of software tools for implementations.

**CS 785 - Computational Linguistics**  
**Credits 3**  
Introduction to linguistics and computational linguistics, for natural language. Phonology, morphology, syntax, semantics, and lexicology. Text analysis and processing; construction of lexicons, and indexes and concordances. Introduction to text retrieval, translation, speech understanding and generation. **Prerequisites:** CS 656

**CS 786 - Advanced Computational Linguistics**  
**Credits 3**  
Advanced study of computational linguistics. Emphasis on cognitive methods in natural language understanding and generation. Pragmatics and discourse. **Prerequisites:** CS 785

**CS 788 - Computational Environmetrics**  
**Credits 3**  
Position based routing, face routing, broadcasting and multi-casting. Interference aware sensor networks. Data gathering and target recognition. Prototype implementation. **Prerequisites:** Consent of instructor.

**CS 789 - Topics in Advanced Computer Science**
**Credits 3**
Graduate-level course in some field of computer science, at advanced level, depending upon the current interest of the staff and the students. **Notes:** May be repeated with a different subject matter to a maximum of nine credits. **Prerequisites:** Consent of instructor.

**CS 790 - Master's Project**
**Credits 1 – 3**
**Notes:** May be repeated, but only three credits will be applied to the student’s program. **Grading:** S/F grading only. **Prerequisites:** Consent of instructor.

**CS 791 – Thesis**
**Credits 3 – 6**
**Notes:** May be repeated, but only six credits will be applied to the student’s program. **Grading:** S/F grading only. **Prerequisites:** Consent of instructor.

**CS 792 - Research Seminar**
**Credits 1**
Oral presentation of assigned articles. **Notes:** May be repeated to a maximum of four credits. **Prerequisites:** Consent of instructor.

**CS 799 - Dissertation Research**
**Credits 1 – 6**
Research analysis and writing towards completion of dissertation and subsequent defense. **Notes:** May be repeated but no more than 18 credits will be allowed in the degree. **Grading:** S/F grading only. **Prerequisites:** Graduate standing in Ph.D. program and consent of advisor.

**INF 730 - Human Computer Interaction**
**Credits 3**
Covers the fundamental concepts and techniques for design, implementation, and evaluation of human computer interfaces. Topics include Foundations of Human computer interaction, design and implementation techniques for graphical user interfaces, evaluation techniques, and different interface models. **Prerequisites:** Consent of instructor.

**INF 731 - Advanced HCI - Design and Implementation**
**Credits 3**
This course is organized around readings that reinforce the student’s knowledge in Human Computer Interaction guidelines, principles, and theories and mainly around projects that allow students to apply theoretical knowledge to the design, implementation, and evaluation of interactive computer systems. **Prerequisites:** INF 730

**INF 732 - Affectively Intelligent Systems**
**Credits 3**
Focuses on computational emotion modeling which spawns from a variety of interest: improving basic understanding of the functional role of emotions in humans; integrating emotion recognition and prediction techniques; synthesizing emotion and expression of emotion to apply to synthetic characters, autonomous software agents or robots; understanding social implications of affective information and communication technology. **Prerequisites:** INF 700

**INF 740 - Digital Media Design, Technology and Representation**
**Credits 3**
Covers principles of design to visualize new media concepts in any medium. Exposes students to new and emerging digital media technologies and applications. **Prerequisites:** Consent of instructor.

**INF 760 - Advanced Theoretical Foundations of Informatics**
**Credits 3**
Advanced course to cover mathematical methods for information modeling, analysis, and manipulation. Requires various research article reading and discussions. Topics include proof techniques, first-order logic, computability theory, complexity theory, model theory, and statistics. **Prerequisites:** INF 700

**INF 770 - Social Foundations of Informatics**  
**Credits 3**  
Covers the relationships between social systems and information and communication technologies. Focuses on social factors that influence the organization of information technologies in social and organizational systems, and how the human social factors and technological tools mutually contribute to the field of Informatics. Prerequisite: Consent of instructor.

**INF 780 - Special Topics in Informatics**  
**Credits 3**  
Emphasis is on new developments and research in science, humanities, fine arts, and other domain informatics. **Prerequisites:** INF 700

**INF 790 - Informatics Project**  
**Credits 3**  
Advanced project in informatics. **Notes:** May be repeated for different project topics, but only three credits will be applied to the student’s program. **Prerequisites:** INF 700 and consent of instructor.

**INF 792 – Internship**  
**Credits 3**  
Supervised internship in business, industry, government, or educational institution providing practical experience to use skills and knowledge acquired in informatics and cognate course work. **Prerequisites:** INF 700 and consent of instructor.

**INF 794 - Research Methods**  
**Credits 3**  
Examination of research methods including: the scientific method, sampling, statistics, research design, analytical technique, literature review, technical writing, professional ethics, faculty research areas and potential topics for thesis. **Prerequisites:** INF 700

**INF 795 - Independent Study in Informatics**  
**Credits 1-6**  
Supervised independent work in a topic of Informatics. **Notes:** May be repeated but no more than 6 credits will be allowed in the degree. **Grading:** S/F grading only. **Prerequisites:** INF 700 and Instructor consent

**INF 797 - Master’s Thesis**  
**Credits 1-6**  
Research analysis and writing towards completion of Master’s thesis and subsequent defense. **Notes:** May be repeated but no more than 6 credits will be allowed in the degree. **Grading:** S/F grading only. **Prerequisites:** INF 700 and Instructor consent

**INF 799 - Dissertation Research**  
**Credits 1 – 6**  
Research analysis and writing towards completion of dissertation and subsequent defense. **Notes:** May be repeated but no more than eighteen credits will be allowed in the degree. **Prerequisites:** Passing the written comprehensive examination.
Electrical and Computer Engineering
Electrical engineering is the basic and applied research of scientific and mathematical principles to investigate, invent, develop, design, manufacture, and control of machines, processes, phenomena, and/or systems. The work of electrical engineers has had and continues to have a direct and vital impact on people's lives in the fields of environment, energy, defense, homeland security, data security, medicine, space exploration, safety, communication, biology and extending to all types of industrial and manufacturing issues. For example, electrical engineers have been responsible for the creation of electric power and signals at all frequencies and pulse repetition rates, modern electronics, computers, electronic communication systems, modern flight controllers, automated manufacturing, medical diagnostic tools. An electrical engineering education continues to provide opportunities for solving problems of great social significance and for augmenting the quality of life. The Department of Electrical and Computer Engineering at UNLV has excellent facilities for graduate education and research in electrical engineering. In addition, the Electrical and Computer Engineering faculty is experienced and knowledgeable in many of the electrical engineering disciplines, including communications, computer engineering, control system theory, electromagnetics and optics, electronics, power systems, signal processing, and solid state devices. At UNLV, students have the opportunity to interact effectively with faculty and personnel so that programs and research theses and dissertations can be tailored to their interests.

Peter Stubberud, Ph.D., Chair
Robert Schill, Ph.D., Graduate Coordinator

Chair

Stubberud, Peter - Full Graduate Faculty
Professor; B.S., M.S., Ph.D., University of California, Los Angeles. Rebel since 1991.

Graduate Coordinator

Schill Jr., Robert A. - Full Graduate Faculty
Professor; B.S.E.E., Milwaukee School of Engineering; M.S.E.E., Ph.D., University of Wisconsin-Madison. Rebel since 1993.

Graduate Faculty

Baker, R. Jacob - Full Graduate Faculty
Professor, B.S., M.S. University of Nevada Las Vegas, Ph.D. University of Nevada Reno. Rebel since 2012.
Research Interests: Integrated circuit design

Baghzouz, Yahia - Full Graduate Faculty
Professor; B.S., M.S., Ph.D., Louisiana State University. Rebel since 1987.
Research Interests: Power system harmonics/power quality; computer-aided analysis of electric power systems; solar photovoltaic systems; renewable energy integration with the utility grid.

Das, Biswajit - Full Graduate Faculty
Professor; B.S.E.E., Indian Institute of Technology, Kharagpur; M.S.E.E., Southern Illinois University, Ph.D., Purdue University. Rebel since 2003.

Research Interests: Nanotechnology, Nanoscale device fabrication and characterization, Biomedical applications of nanotechnology, Sensors and sensor networks, RF Circuit Design.

Jiang, Yingtao - Full Graduate Faculty
Associate Professor; B.E., Chongqing University; M.S.E.E., Concordia University, Montreal; Ph.D., University of Texas at Dallas. Rebel since 2001.

Research Interests: Algorithms, VLSI architectures, and circuit level techniques for the design of DSP, networking and telecommunications systems; computer architectures; computer aided designs; biomedical signal processing, instrumentation, and medical informatics; BioMEMS/BioNEMS; wireless communications and security.

Kachroo, Pushkin - Full Graduate Faculty
Professor; B. Tech (Civil Eng), Indian Institute of Technology; MSME, Rice University; Ph.D. University of California at Berkeley, Ph.D. Virginia Polytechnic Institute. Rebel since 2008.

Research Interests: Nonlinear and hybrid control systems, intelligent transportation systems, mechatronics, robotics, distributed parameter systems, differential geometric methods, feedback control in e-marketing, and education and learning, bio-dynamics and control, nano-bio transport control and robotics.

Latifi, Shahram - Full Graduate Faculty
Professor; B.S., M.S., Teheran University; M.S., Ph.D., Louisiana State University. Rebel since 1989.

Research Interests: Computer networks, parallel processing, fault-tolerant computing, data compression.

Morris, Brendan - Full Graduate Faculty
Assistant Professor; B.S., University of California, Berkeley; Ph.D., University of California, San Diego. Rebel since 2001.

Research Interests: Intelligent systems, computer vision, pattern recognition, machine learning, intelligent transportation systems, and intelligent vehicles.

Muthukumar, Venkatesan - Full Graduate Faculty
Associate Professor; B.S.E.E., Anna University India; M.S.E.E., Ph.D., Monash University, Australia. Rebel since 2001.

Research Interests: Embedded systems, high performance computation on FPGAs, network and system on chips, multi-core and microprocessor systems.

Regentova, Emma - Full Graduate Faculty
Associate Professor; M.S.C.E., Ph.D., State Engineering University of Armenia. Rebel since 2001.

Research Interests: Classical and applied image processing, image analysis, coding and compression, pattern recognition. Advanced Computer Architectures, Computer Networks.

Saberinia, Ebrahim - Full Graduate Faculty
Associate Professor; B.S.E.E., M.S.E.E., Sharif University of Technology; Ph.D., University of Minnesota. Rebel since 2004.

Research Interests: Communications; Wireless communication systems and networks; Wireless local, personal and sensor area networks.

Schill, Robert A. - Full Graduate Faculty
Professor; B.S.E.E., Milwaukee School of Engineering; M.S.E.E., Ph.D., University of Wisconsin-Madison. Rebel since 1993.

Research Interests: Charged particle beams; microwave theory; fiber, traditional and modern optics; plasma physics; electromagnetic fields and material interactions; linear and nonlinear waves; pulsed power; biomedical and environmental applications of electromagnetics and pulse power.

Selvaraj, Henry - Full Graduate Faculty
Professor; M.S., Ph.D., Warsaw University of Technology. Rebel since 1994.
Research Interests: Digital circuit design; programmable logic devices; logic synthesis; application of logic synthesis techniques in machine learning; data compression and data mining, functional decomposition; PLAs; and FPGAs; multiple valued functions and applications; artificial intelligence and multimedia; microprocessor architecture; and DSP.

Singh, Sahjendra N. - Full Graduate Faculty
Professor: B.S., Patna University; M.E., Indian Institute of Science; Ph.D., The Johns Hopkins University. Rebel since 1986.

Stubberud, Peter - Full Graduate Faculty
Professor: B.S., M.S., Ph.D., University of California, Los Angeles. Rebel since 1991.
Research Interests: Digital Signal Processing, multidimensional digital signal processing, adaptive signal processing, neural networks, mixed signal VLSI design, data converters.

Sun, Ke-Xun - Full Graduate Faculty
Professor: B.S., Peking (Beijing) University; M.S., Nagoya University; Ph.D., Massachusetts Institute of Technology. Rebel since 2012.
Research Interests: Security science and engineering, radiation hard III-V semiconductor and devices, micro and nano technology, radiation detection and measurement, ultrafast electronics, optics and nonlinear optical devices, HEDP diagnostics systems, space flight and payload instruments, and scientific computing.

Venkat, Rama - Full Graduate Faculty
Professor: B.Tech., Indian Institute of Technology; M.S., Ph.D., Purdue University. Rebel since 1989.

Yang, Mei - Full Graduate Faculty
Associate Professor; B.E.C.E., M.E.C.E., University of Electronic Science and Technology of China; Ph.D., University of Texas at Dallas. Rebel since 2004.
Research Interests: Computer architectures, computer networks, wireless sensor networks, and embedded systems.

Professors Emeriti

Brogan, William L.
Emeritus Professor; B.S.M.E., State University of Iowa; M.S., Ph.D., University of California, Los Angeles. UNLV Emeritus 1990-1998.

McGaugh, Eugene E.
Emeritus Professor; B.S., University of Kansas; M.S., University of Missouri; Ph.D., University of Kansas. UNLV Emeritus 1989-2010.

Electrical and Computer Engineering Plans

Master of Science in Engineering - Electrical Engineering

The Department of Electrical and Computer Engineering at UNLV offers a number of program degree options leading to the Master of Science in Engineering (M.S.E.) - Electrical Engineering. Specific areas of study that are currently available include Communications, Computer Engineering, Control System Theory, Electromagnetics and Optics, Electronics, Power Systems, Signal Processing, and Solid State Materials and Devices. The following degree options are available: M.S.E. - Electrical Engineering with thesis option, M.S.E. - Electrical Engineering with course only option, M.S.E. - Electrical Engineering Integrated BS-MS track option, and M.S.E. - Electrical Engineering dual degree option. The M.S.E. - Electrical Engineering thesis option culminates with a thesis which
preparations the student for a Ph.D. experience if higher education is desired. The course only option is a final advanced professional degree option culminating with a comprehensive exam that must be passed in the student’s specialty area. The Integrated BS-MS track option is for UNLV graduates who excel in their ECE UNLV undergraduate programs wanting to attain a M.S.E. or Ph.D. degree at UNLV in ECE with the thesis option. The dual degree program allows the student to complete a M.S.E. Electrical Engineering degree and a Masters of Science in Mathematics degree jointly [Refer to Dual Degree: Master of Science in Engineering, Electrical Engineering and Master of Science, Mathematical Sciences].

**Learning Outcomes**

www.unlv.edu/degree/ms-electrical-engineering

**Plan Admission Requirements**

Applications are considered on an individual basis. Candidates can be admitted on a regular (full graduate standing) or provisional status. Qualified applicants who are not admitted on either status can take graduate courses as a non-degree seeking graduate student. Up to 15 UNLV credits taken as a non-degree seeking graduate student at UNLV can be applied towards an M.S.E. degree. Potentially, six graduate credits taken at another regionally accredited university [Graduate College Policy] may be transferred into the M.S.E. degree program at UNLV. At most, only 15 credits of a combination of non-UNLV course credits and ECE UNLV course credits taken as a non-seeking graduate student may be applied to the M.S.E. program. Courses with a grade less than B (3.0) cannot be applied to the M.S.E. program. Further, the courses must not have been or will be applied to different degree program. Note that informal course credits will not be transferred into a M.S.E. degree program. Informal courses such as Graduate Independent Study and seminar taken as a non-degree seeking student cannot be applied towards an M.S.E. degree. Non-degree seeking students can count Electrical & Computer Engineering Graduate Special Topics towards the program degree as long as they adhere to the conditions of the particular program option regarding informal course credits.

To be considered for admission to the M.S.E. program, an applicant must:

1. Have a Bachelor of Science (B.S.) degree in electrical engineering, computer engineering or a closely related discipline.
2. Applicants who possess a bachelor’s degree in a closely related discipline, such as physics or mathematics, may be admitted on conditional and/or provisional status. These students will be required to complete certain undergraduate and/or graduate courses before they can attain regular status. The graduate committee determines these courses on an individual basis.
3. Graduates with degrees in engineering technology ordinarily have an inadequate background to be admitted to the graduate program.
4. Have a minimum grade point average (GPA) of 3.00 (A=4.00) for their bachelor’s degree. Applicants who have an overall GPA below 3.00 must submit Graduate Record Examination (GRE) scores (scaled score and percentile score in quantitative, verbal reasoning, and analytical writing) to the Electrical and Computer Engineering Department. These applicants may be admitted subject to the discretion and possible further requirements of the Electrical and Computer Engineering Graduate Committee. Applicants who want to be considered for an assistantship, or who feel that their GRE scores will enhance their chances for admission, are strongly encouraged to submit GRE scores.
5. Submit GRE scaled and percentile scores in quantitative, verbal reasoning, and analytical writing to the Department of Electrical and Computer Engineering if the applicant did not obtain his bachelor’s degree from an ABET accredited institution, if the applicant is interested in a teaching assistantship, or if the applicant received a Bachelor’s Degree in Electrical and Computer Engineering more than five years prior to the first day of the first semester of the degree program applied for. Interpretation of the scores is at the discretion of the Electrical and Computer Engineering Graduate Committee. (An applicant possessing a bachelor’s degree from an ABET accredited institution within the past five years is not required to submit GRE scores.)
6. Submit a completed application prior to the department’s admission deadline.
7. Completed online application.
8. Submit official transcripts of all college-level work to the Graduate College.
9. Submit an additional set of transcripts of all college-level work directly to the Department of Electrical and Computer Engineering.
10. Submit a one page written statement of purpose indicating the applicant's research interests, motivations, and objectives.
11. In the statement of purpose, the applicant must explicitly identify his/her areas of interest from the following list of areas offered at UNLV in the ECE Department: Communications, Computer Engineering, Control Systems, Electromagnetics and Optics, Electronics, Power Systems, Signal Processing, and Solid State Materials and Devices (which includes Nanotechnology).
12. Applicants are required to account for all time beyond the Bachelor degree indicating how they have developed professionally.
13. Applicants transferring from other graduate programs must justify why they are leaving that program to join our program.
14. Applicants receiving grades less than B in a graduate course elsewhere may not be admitted to the graduate program without a well justified explanation. Poor performance in course work in the program that the student is transferring from may be a cause for denial of admission. It will be the graduate committee's discretion whether to allow or deny admission.
15. Submit three dated letters of recommendation concerning the applicant's potential for succeeding in the graduate program. If the applicant has attended a university or is currently enrolled in a program beyond the bachelor degree, then the letters of recommendation should be solicited from that university or program. If the applicant has been out of school for an extended period of time, then letters should be solicited from the professional community that can comment on the applicant's technical background and/or from the applicant's most recent academic institution. Letters of recommendation written beyond a six-month period prior to applying for admission to our graduate program will not be accepted. Strong letters of recommendation illustrate technical talent and professional accomplishments beyond the grade point average or course grade. The graduate committee is interested in the applicant's technical, conceptual, verbal, ethical, and social skills. The graduate committee is interested in the applicant's ability to perform research with evidence to substantiate claims made. Note that letters from professors that casually know the applicant will not help in the admission process.

Application deadlines are February 1st for admission in the fall of the same year and October 1st for admission in the spring of the subsequent year.

Before international applicants can be considered for admission, the Graduate College requires that all international applicants take the Test of English as a Foreign Language (TOEFL) and obtain a minimum score of 550 or 85 on the Michigan Test. Students whose first language is not English may be required to take and pass the English as a Second Language Placement Test upon arrival at UNLV. If necessary, they will be required to take English as a Second Language (ESL) courses at UNLV.

All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

The Integrated BS-MS Track program allows select UNLV undergraduates to pursue the Electrical Engineering M.S.E. degree at UNLV. The program provides an opportunity for those undergraduates who have taken either 9, 6, or 3 graduate-level electrical and computer engineering course credits applied toward their undergraduate electrical/computer engineering degrees, to complete the respectively corresponding M.S. in Engineering with a total of either 21, 24, or 27 as opposed to the 30 credits required for Thesis Track. Students admitted to the Integrated BS-MS Track program are required to write a thesis.

To be considered for admission to the Integrated BS-MS Track, an applicant must:
Have a minimum overall grade point average (GPA) of 3.5 (A = 4.00) for their B.S. degree in electrical engineering or computer engineering at UNLV.

Have completed up to a maximum of 9 credits of formal Graduate College curriculum approved 600/700 level courses (which excludes informal courses such as Graduate Independent Study, Graduate Seminar, and Special Topics) which were applied towards the student's B.S. degree. Each graduate level course must have been completed with a minimum grade of B (3.0).

Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Comprehensive Exam Track

Total Credits Required: 30

Course Requirements

Core Courses, 9 credits

- Complete a minimum of 3 credits in at least three of the following areas:
  - Communications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 760 - Random Processes in Engineering Problems
    - ECG 762 - Detection and Estimation of Signals in Noise
  - Computer Engineering
    - ECG 700 - Advanced Computer System Architecture
    - ECG 701 - Reliable Design of Digital Systems
    - ECG 702 - Interconnection Networks for Parallel Processing Applications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 706 - Analysis of Telecommunication and Data Networks
    - ECG 707 - Logic Synthesis Engineering
    - ECG 709 - Synthesis and Optimization of Digital System
  - Control Systems Theory
    - ECG 770 - Linear Systems Theory
    - ECG 771 - Optimal and Modern Controls
    - ECG 772 - Nonlinear Systems I
    - ECG 774 - Stochastic Control
    - ECG 776 - Adaptive Control
  - Electromagnetics and Optics
    - ECG 730 - Advanced Engineering Electromagnetics I
    - ECG 731 - Theoretical Techniques in Electromagnetics
    - ECG 732 - Advanced Engineering Electromagnetics II
    - ECG 733 - Plasma I
  - Electronics
    - ECG 720 - Advanced Analog IC Design
    - ECG 721 - Memory Circuit Design
    - ECG 722 - Mixed-Signal Circuit Design
  - Power Engineering
    - ECG 740 - Computer Analysis Methods for Power Systems
    - ECG 741 - Electric Power Distribution System Engineering
    - ECG 742 - Power System Stability and Control
**Signal Processing**
- ECG 762 - Detection and Estimation of Signals in Noise
- ECG 781 - Digital Filters
- ECG 782 - Multidimensional Digital Signal Processing
- ECG 783 - Adaptive Signal Processing with Neural Networks

**Solid State Electronics**
- ECG 750 - Optical Electronics I
- ECG 752 - Physical Electronics
- ECG 753 - Advanced Topics in Semiconductor Devices I
- ECG 755 - Monolithic Integrated Circuit Fabrication
- ECG 756 - Advanced Topics in Semiconductor Devices II
- ECG 757 - Electron Transport Phenomena in Solid State Devices

Additional Core Courses, Ai Credits: 12
- Complete 12 credits of 700-level additional core courses from the core courses in any of the areas listed above.
- Elective Courses, Ai Credits 9
  - Complete a minimum of 9 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.

**Degree Requirements**

- Students must satisfy the M.S.E. - Electrical Engineering degree program admission requirements and be admitted to the M.S.E. - Electrical Engineering program with regular full graduate standing status, having met all conditions and provisions.
- Students must complete a minimum of 30 credits of graduate level courses with an overall minimum GPA of 3.00 (B), a minimum GPA of 3.00 (B) each semester, and a minimum GPA of 2.70 (B-) in each class applied towards the 30 credits. Grades below B- are not counted towards the M.S.E. degree and must be repeated or replaced.
- Students who do not maintain an overall GPA of 3.00 (B), a GPA of 3.00 (B) each semester, or who earn more than one grade below B- will either be placed on probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee and/or the Graduate College will determine the terms of the student's probation in accordance with the rules of the Graduate College.
- At the time of admission or no later than the first semester, the candidate must formally petition BOTH the graduate college and the ECE graduate committee to accept transfer credits and credits taken as a non-degree seeking graduate student to be applied to the M.S.E. program.
- Students must select a faculty advisor in their first semester.
- A minimum of 21 credits must be in core electrical engineering 700-level courses excluding informal courses (such as Independent Study, Graduate Seminar, and Special Topics).
- No more than 3 credits may be from Independent Study (which cumulatively includes Graduate Seminar) and no more than a total of 6 credits of the combination of Independent Study, Graduate Seminar, and Graduate Special Topics may be applied towards the M.S.E. degree program.
- Pass a comprehensive exam on graduate level coursework in the student's specialty area.
- The exam may be taken in the last two semesters of the student's M.S.E. program.
- The student may not take the exam until all course work pertaining to the exam is completed. For clarity, students enrolled in courses pertaining to the comprehensive exam cannot take the comprehensive exam. Within the six year limit, the exam may be repeated until passed but cannot be taken more than once per semester. Prior to the end of the first week of classes in the student's last two semesters, the student must announce to the ECE Graduate Coordinator his/her intention of taking the exam, the major field to be examined, and at least two courses taken in that field.
- The Comprehensive Exam Track is a final advanced professional degree option in that students who complete this track will not be considered for admission into any of the department's Ph.D. program options.
Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must pass a final comprehensive exam.

Subplan 2 Requirements: Thesis Track

Total Credits Required: 30

Course Requirements

Core Courses: 9

- Complete a minimum of 3 credits in at least three of the following areas:
  - Communications
    - ECG 662 - Advanced Digital Communications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 760 - Random Processes in Engineering Problems
    - ECG 762 - Detection and Estimation of Signals in Noise
  - Computer Engineering
    - ECG 600 - Computer Communication Networks
    - ECG 603 - Embedded Systems Design
    - ECG 604 - Modern Processor Architecture
    - ECG 605 - Data Compression Systems
    - ECG 607 - Biometrics
    - ECG 608 - Digital Design Verification and Testing
    - ECG 700 - Advanced Computer System Architecture
    - ECG 701 - Reliable Design of Digital Systems
    - ECG 702 - Interconnection Networks for Parallel Processing Applications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 706 - Analysis of Telecommunication and Data Networks
    - ECG 707 - Logic Synthesis Engineering
    - ECG 709 - Synthesis and Optimization of Digital Systems
  - Control Systems Theory
    - ECG 672 - Digital Control Systems
    - ECG 674 - Recent Topics in Control
    - ECG 770 - Linear Systems Theory
    - ECG 771 - Optimal and Modern Controls
    - ECG 772 - Nonlinear Systems I
    - ECG 774 - Stochastic Control
    - ECG 776 - Adaptive Control
  - Electromagnetics and Optics
    - ECG 630 - Transmission Lines
    - ECG 631 - Engineering Optics
    - ECG 632 - Antenna Engineering
    - ECG 633 - Active and Passive Microwave Engineering
    - ECG 730 - Advanced Engineering Electromagnetics I
    - ECG 731 - Theoretical Techniques in Electromagnetics
    - ECG 732 - Advanced Engineering Electromagnetics II
    - ECG 733 - Plasma I
  - Electronics
- ECG 620 - Analog Integrated Circuit Design
- ECG 621 - Digital Integrated Circuit Design
- ECG 720 - Advanced Analog IC Design
- ECG 721 - Memory Circuit Design
- ECG 722 - Mixed-Signal Circuit Design

  - Power Engineering
    - ECG 642 - Power Electronics
    - ECG 646 - Photovoltaic Devices and Systems
    - ECG 740 - Computer Analysis Methods for Power Systems
    - ECG 741 - Electric Power Distribution System Engineering
    - ECG 742 - Power System Stability and Control

  - Signal Processing
    - ECG 680 - Discrete-Time Signal Processing
    - ECG 762 - Detection and Estimation of Signals in Noise
    - ECG 781 - Digital Filters
    - ECG 782 - Multidimensional Digital Signal Processing
    - ECG 783 - Adaptive Signal Processing with Neural Networks

  - Solid State Electronics
    - ECG 651 - Electronic and Magnetic Materials and Devices
    - ECG 652 - Optoelectronics
    - ECG 653 - Introduction to Nanotechnology
    - ECG 750 - Optical Electronics I
    - ECG 752 - Physical Electronics
    - ECG 753 - Advanced Topics in Semiconductor Devices I
    - ECG 755 - Monolithic Integrated Circuit Fabrication
    - ECG 756 - Advanced Topics in Semiconductor Devices II
    - ECG 757 - Electron Transport Phenomena in Solid State Devices

- Additional Core Courses, Â½ Credits: 9
  - Complete 9 credits of additional core courses from the core courses in any of the areas listed above.

- Elective Courses, Â½ Credits: 6
  - Complete a minimum of 6 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.

- Thesis, Â½ Credits: 6
  - ECG 797 - Electrical Engineering Thesis

**Degree Requirements**

- Students must satisfy the M.S.E. - Electrical Engineering degree program admission requirements and be admitted to the M.S.E. - Electrical Engineering program with regular full graduate standing status, having met all conditions and provisions.
- Students must complete a minimum of 30 credits of graduate level courses with an overall minimum GPA of 3.00 (B), a minimum GPA of 3.00 (B) each semester, and a minimum GPA of 2.70 (B-) in each class applied towards the 30 credits. Grades below B- are not counted towards the M.S.E. degree and must be repeated or replaced.
- Students who do not maintain an overall GPA of 3.00 (B), a GPA of 3.00 (B) each semester, or who earn more than one grade below B- will either be placed on probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee and/or the Graduate College will determine the terms of the student, Åös probation in accordance with the rules of the Graduate College.
- At the time of admission or no later than the first semester, the MS candidate must formally petition BOTH the graduate college and the ECE graduate committee to accept transfer credits and credits taken as a non-degree seeking graduate student to be applied to the M.S.E. program.
- Students must select a faculty advisor in their first semester.
A minimum of 18 credits must be in core (formal) electrical engineering courses, of which 15 credits must be 700-level. This excludes Thesis credits, and informal courses (such as Special Topics, Graduate Seminar, and Independent Study).

No more than 3 credits may be from Independent Study (which cumulatively includes Graduate Seminar) and no more than a total of 6 credits of the combination of Independent Study, Graduate Seminar, and Graduate Special Topics may be applied towards the M.S.E. degree program.

In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department,Â’s discretion. Please see Graduate College policy for committee appointment guidelines.

Students must complete a thesis.

Students must complete at least 6 credits of Thesis which culminates in the successful completion of a thesis oral exam and the submission of an approved thesis. Although Electrical Engineering Thesis can be taken repeatedly, no more than 6 credits can be applied towards the 30 credits required for the M.S.E. degree.

Before beginning a thesis, students must have their thesis topic approved by their advisor, and the necessary paper work must be filed with the Graduate College. The thesis prospectus describes the thesis topic and must include an introductory set of sentences, a well formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take thesis credits until their thesis prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.

The student must complete a thesis containing original research and publically defend it before his/her advisory committee at the Thesis Exam.

Prior to the student,Â’s defense of the thesis before his/her advisory committee, the student must submit a complete copy of the thesis to each member of his/her advisory committee. This submission must occur at least two weeks prior to the date of the oral defense. The student must also notify each member of his/her advisory committee of the date, time and location of the oral defense of the thesis or project at least two weeks in advance.

Students who plan to continue their studies beyond the M.S.E. degree program are strongly encouraged to select this option.

A full graduate standing master,Â’s degree candidate who is interested in pursuing a doctoral degree may be allowed to take the Ph.D. qualifying exam without penalty during his/her period as an M.S.E. student. The exam may be taken as many times as desired but no more than once a semester at the time the exam is typically offered. The M.S.E. candidate must pass four areas of choice in a single sitting to satisfy the Qualifying Exam requirement. If the student successfully completes the Qualifying Exam requirement while pursuing the M.S.E. degree in Electrical Engineering with a thesis option in the Electrical and Computer Engineering department at UNLV, the student will have automatically fulfilled the Qualifying Exam requirement upon admission to the Ph.D. program in the Electrical and Computer Engineering program at UNLV. Once the student receives an M.S. degree in the field of Electrical Engineering, the student must abide by the requirements outlined in the Ph.D. program. This option is not available to non-degree students.

**Graduation Requirements**

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.
Subplan 3 Requirements: Integrated BS-MS Track

Total Credits Required: 21-27

Course Requirements

Core Courses, 0-9 Credits:

- Complete a minimum of 0-3 credits in at least three of the following areas:
  - Communications
    - ECG 662 - Advanced Digital Communications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 760 - Random Processes in Engineering Problems
    - ECG 762 - Detection and Estimation of Signals in Noise
  - Computer Engineering
    - ECG 600 - Computer Communication Networks
    - ECG 603 - Embedded Systems Design
    - ECG 604 - Modern Processor Architecture
    - ECG 605 - Data Compression Systems
    - ECG 607 - Biometrics
    - ECG 608 - Digital Design Verification and Testing
    - ECG 700 - Advanced Computer System Architecture
    - ECG 701 - Reliable Design of Digital Systems
    - ECG 702 - Interconnection Networks for Parallel Processing Applications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 706 - Analysis of Telecommunication and Data Networks
    - ECG 707 - Logic Synthesis Engineering
    - ECG 709 - Synthesis and Optimization of Digital Systems
  - Control Systems Theory
    - ECG 672 - Digital Control Systems
    - ECG 674 - Recent Topics in Control
    - ECG 770 - Linear Systems Theory
    - ECG 771 - Optimal and Modern Controls
    - ECG 772 - Nonlinear Systems I
    - ECG 774 - Stochastic Control
    - ECG 776 - Adaptive Control
  - Electromagnetics and Optics
    - ECG 630 - Transmission Lines
    - ECG 631 - Engineering Optics
    - ECG 632 - Antenna Engineering
    - ECG 633 - Active and Passive Microwave Engineering
    - ECG 730 - Advanced Engineering Electromagnetics I
    - ECG 731 - Theoretical Techniques in Electromagnetics
    - ECG 732 - Advanced Engineering Electromagnetics II
    - ECG 733 - Plasma I
  - Electronics
    - ECG 620 - Analog Integrated Circuit Design
    - ECG 621 - Digital Integrated Circuit Design
    - ECG 720 - Advanced Analog IC Design
    - ECG 721 - Memory Circuit Design
    - ECG 722 - Mixed-Signal Circuit Design
  - Power Engineering
    - ECG 642 - Power Electronics
    - ECG 646 - Photovoltaic Devices and Systems
    - ECG 740 - Computer Analysis Methods for Power Systems
- ECG 741 - Electric Power Distribution System Engineering
- ECG 742 - Power System Stability and Control

- Signal Processing
  - ECG 680 - Discrete-Time Signal Processing
  - ECG 762 - Detection and Estimation of Signals in Noise
  - ECG 781 - Digital Filters
  - ECG 782 - Multidimensional Digital Signal Processing
  - ECG 783 - Adaptive Signal Processing with Neural Networks

- Solid State Electronics
  - ECG 651 - Electronic and Magnetic Materials and Devices
  - ECG 652 - Optoelectronics
  - ECG 653 - Introduction to Nanotechnology
  - ECG 750 - Optical Electronics I
  - ECG 752 - Physical Electronics
  - ECG 753 - Advanced Topics in Semiconductor Devices I
  - ECG 755 - Monolithic Integrated Circuit Fabrication
  - ECG 756 - Advanced Topics in Semiconductor Devices II
  - ECG 757 - Electron Transport Phenomena in Solid State Devices

- Additional Core Courses, Å:\i Credits: 0-9
  - Complete 0-9 credits of additional core courses from the core courses in any of the areas listed above.

- Elective Courses, Å:\i Credits: 0-6
  - Complete 0-6 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.

- Thesis, Å:\i Credits: 6
  - ECG 797 - Electrical Engineering Thesis

**Degree Requirements**

- Students must satisfy the M.S.E. - Electrical Engineering degree program admission requirements and be admitted to the M.S.E. - Electrical Engineering program with regular full graduate standing status, having met all conditions and provisions.
- Total credits required depends on the total number of approved graduate-level course work taken as technical electives (with a grade of B or better) during the senior year.
- Complete a minimum of 21, 24, or 27 credits (including thesis credits) in the Integrated BS-MS track program respectively corresponding to 9, 6, or 3 credits of formally approved graduate level courses applied toward the B.S. degree yielding a total of 30 course credits. The final division of major, minor, and elective credits will be determined in consultation with the student, Å:\o advisor.
- Students must complete all courses with an overall minimum GPA of 3.00 (B), a minimum GPA of 3.00 (B) each semester, and a minimum GPA of 2.70 (B-) in each class applied towards the 30 credits. Grades below B- are not counted towards the M.S.E. degree and must be repeated or replaced.
- Students who do not maintain an overall GPA of 3.00 (B), a GPA of 3.00 (B) each semester, or who earn more than one grade below B- will either be placed on probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee and/or the Graduate College will determine the terms of the student, Å:\o probation in accordance with the rules of the Graduate College.
- At the time of admission or no later than the first semester, the MS candidate must formally petition BOTH the graduate college and the ECE graduate committee to accept transfer credits and credits taken as a non-degree seeking graduate student to be applied to the M.S.E. program.
- Students must select a faculty advisor in their first semester.
- A minimum of 18 credits must be in core (formal) electrical engineering courses, of which 15 credits must be 700-level. This excludes Thesis credits, and informal courses (such as Special Topics, Graduate Seminar, and Independent Study).
- No more than 3 credits may be from Independent Study (which cumulatively includes Graduate Seminar) and no more than a total of 6 credits of the combination of Independent Study, Graduate Seminar, and Graduate Special Topics may be applied towards the M.S.E. degree program.
• In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department’s discretion. Please see Graduate College policy for committee appointment guidelines.
• Students must complete a thesis.
• Students must complete at least 6 credits of Thesis which culminates in the successful completion of a thesis oral exam and the submission of an approved thesis. Although Electrical Engineering Thesis can be taken repeatedly, no more than 6 credits can be applied towards the 30 credits required for the M.S.E. degree.
• Before beginning a thesis, students must have their thesis topic approved by their advisor, and the necessary paper work must be filed with the Graduate College. The thesis prospectus describes the thesis topic and must include an introductory set of sentences, a well formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take thesis credits until their thesis prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.
• The student must complete a thesis containing original research and publicly defend it before his/her advisory committee at the Thesis Exam.
• Prior to the student’s defense of the thesis before his/her advisory committee, the student must submit a complete copy of the thesis to each member of his/her advisory committee. This submission must occur at least two weeks prior to the date of the oral defense. The student must also notify each member of his/her advisory committee of the date, time and location of the oral defense of the thesis or project at least two weeks in advance.
• Students who plan to continue their studies beyond the M.S.E. degree program are strongly encouraged to select this option.
• A full graduate standing master,Â’s degree candidate who is interested in pursuing a doctoral degree may be allowed to take the Ph.D. qualifying exam without penalty during his/her period as an M.S.E. student. The exam may be taken as many times as desired but no more than once a semester at the time the exam is typically offered. The M.S.E. candidate must pass four areas of choice in a single sitting to satisfy the Qualifying Exam requirement. If the student successfully completes the Qualifying Exam requirement while pursuing the M.S.E. degree in Electrical Engineering with a thesis option in the Electrical and Computer Engineering department at UNLV, the student will have automatically fulfilled the Qualifying Exam requirement upon admission to the Ph.D. program in the Electrical and Computer Engineering program at UNLV. Once the student receives an M.S. degree in the field of Electrical Engineering, the student must abide by the requirements outlined in the Ph.D. program. This option is not available to non-degree students.

Graduation Requirements

• The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
• The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
• Student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Plan Graduation Requirements

Refer to your subplan for Graduation Requirements.

  o Subplan 1: Comprehensive Exam Track
  o Subplan 2: Thesis Track
  o Subplan 3: Integrated BS-MS Track
Doctor of Philosophy - Electrical Engineering

The culminating experience in the Ph.D. program in the Department of Electrical and Computer Engineering is centered about developing new knowledge focused around a specific theme embodied in the form a well-written and orally defended dissertation. The Department of Electrical and Computer Engineering at UNLV offers a number of program options leading to the Ph.D. degree in the Field of Electrical Engineering. Specific major areas of study currently available include: Communications, Computer Engineering, Control System Theory, Electromagnetics and Optics, Electronics, Power Systems, Signal Processing, and Solid State Materials and Devices.

Applicants may be admitted to the Electrical Engineering Ph.D Program through one of the following three options: the Post-Master,Â’s Track, the Post-Bachelor,Â’s Track, or the Post-Bachelor,Â’s Integrated BS-PHD Track. The Post-Master,Â’s Track requires the student to have completed a M.S. Degree in Electrical Engineering, Computer Engineering, or a closely related field with thesis before entering the program.

The Post-Bachelor,Â’s Track allows undergraduates with outstanding undergraduate backgrounds to enter the Ph.D. program without having to complete a M.S. Degree in Electrical or Computer Engineering. The Post-Bachelor,Â’s Integrated BS-PHD Track allows students who applied up to 9 credits of graduate courses towards their B.S. degrees to complete their Ph.D. in engineering with up to 9 fewer credits than students in the Post-Bachelor,Â’s Track. All requirements leading to a Ph.D. are still required beyond the B.S. Degree in Electrical and Computer Engineering excluding the completion of a Master,Â’s thesis. In conjunction with these options, a dual degree option does exist for candidates simultaneously working towards a Ph.D. degree in Electrical Engineering and a Master of Science degree in Mathematics. This program prepares graduate students with complementing educational components covering electrical engineering and mathematics, which is the basis of all engineering. [Refer to the Dual Degree Doctor of Philosophy,Â’s Electrical Engineering and Master of Science,Â’s Mathematical Sciences program description.]

Learning Outcomes

http://www.unlv.edu/degree/phd-electrical-engineering

Plan Admission Requirements

Applicants are considered on an individual basis. Applicants may be admitted as a regular or provisional status student. Qualified applicants who are not admitted can take graduate courses as a non-degree seeking graduate student. Up to 15 UNLV credits taken as a non-degree seeking graduate student at UNLV can be applied towards a PhD degree program in electrical and computer engineering. Potentially, nine graduate credits taken at another regionally accredited university may be transferred in the PhD degree program at UNLV. At most, only 15 credits of a combination of UNLV and non-UNLV course credits, within the constraints above, may be applied to the PhD program. Courses with a grade less than B (3.0) will not be applied to the PhD program. Further, the courses must not have been or will be applied to different degree program. Note that informal course credits will not be transferred into a PhD degree program. Informal courses such as Graduate Independent Study and Seminar taken as a non-degree seeking student cannot be applied towards a program degree in ECE. Non-degree seeking students can count Electrical & Computer Engineering Graduate Special Topics towards the program degree as long as they adhere to the conditions of the particular program option regarding informal course credits.

To be considered for admission an applicant must:

Submit GRE scaled and percentile scores in quantitative, verbal reasoning, and analytical writing to the Department of Electrical and Computer Engineering and have obtained the following minimum relative percentile comparison rank of 75 in the Quantitative section, 20 in the Verbal Reasoning section, and 20 in Analytical Writing. Please note that GRE scores will only be considered valid if taken within five years prior to the time of admission.
and are recognized by the GRE examination board. Official scores must be obtained from an official GRE provider. The GRE requirement can be waived under the circumstances listed in the GRE Waiver section.

Submit a completed application form and official transcripts of all college level work to the Graduate College. Submit an additional set of transcripts of all college-level work directly to the Department of Electrical and Computer Engineering.

Submit a one page written statement of purpose indicating the applicant's interests, motivations, and objectives. In the statement of purpose, the applicant must explicitly identify his/her areas of interest from the following list of areas offered at UNLV in the ECE Department: Communications, Computer Engineering, Control Systems, Electromagnetics and Optics, Electronics, Power Systems, Signal Processing, and Solid State Materials and Devices (which includes Nanotechnology). Applicants are required to account for all time beyond the B.S. degree indicating how they have developed professionally. Applicants transferring from other graduate programs without obtaining an M.S. degree must justify why they are leaving that program to join our graduate program. Applicants receiving grades less than B in a graduate course elsewhere may not be admitted to the graduate program without a well justified explanation. Poor performance in course work in the program that the student is transferring from can be a cause for denial of admission. It will be the graduate committee's discretion whether to allow or deny admission.

Submit three letters of recommendation (signed and dated) concerning the applicant's potential for succeeding in the graduate program directly to the Department of Electrical and Computer Engineering. Letters of reference may be electronically uploaded in the online admissions application process. If the student received a M.S. degree in electrical or computer engineering at UNLV, then only one letter of recommendation is required, and it must come from the candidate, the faculty advisor who should be the student, the thesis committee chair. If the applicant has attended a university or is currently enrolled in a program beyond the M.S. degree, then at least one letter of recommendation should be solicited from that university or program and two from the university in which the M.S. degree was received. One of the three letters should be written by your thesis advisor commenting on your background and your research. If the applicant has been out of school for an extended period of time, then letters should be solicited from the professional community who can comment on the applicant, the technical background and/or from the applicant, the most recent academic institution. Letters of recommendation written beyond a six-month period prior to applying for admission to our graduate program will not be accepted. Strong letters of recommendation illustrate technical talent and professional accomplishments beyond the grade point average or course grade. The graduate committee is interested in the applicant, the technical, conceptual, verbal, ethical and social skills. The graduate committee is interested in the applicant, the ability to perform research with evidence to substantiate claims made. Note that letters from professors that casually know you will not help you in the admission process.

Before international applicants can be considered for admission, the Graduate College requires that all international applicants take the Test of English as a Foreign Language (TOEFL) and obtain a minimum score of 550 or 85 on the Michigan Test. Students whose first language is not English may be required to take and pass the English as a Second Language Placement Test upon arrival at UNLV. If necessary, they will be required to take English as a Second Language (ESL) courses at UNLV.

All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Application deadlines are February 1st for admission in the fall of the same year and October 1st for admission in the spring of the subsequent year.

Post-Master Track

Have a Master of Science (M.S.) degree in electrical engineering or computer engineering or a closely related field with an M.S. thesis component. The M.S. thesis must be completed prior to admission. Potential candidates applying to the program based on a course only option or a project option will not be admitted. (Applicants who
possess a bachelor’s degree in a closely related discipline, such as physics or mathematics, may be admitted on conditional and/or provisional status. These students will be required to complete certain undergraduate and/or graduate courses before they can attain regular full graduate standing status. The graduate committee determines these courses on an individual basis.)

Have a minimum overall grade point average (GPA) of 3.20 (A = 4.00) for their M.S. degree and a 3.00 for their B.S. degree.

Post-Bachelors Track:

Have a Bachelor of Science (B.S.) degree in electrical engineering or computer engineering or a closely related field. (Applicants who possess a bachelor degree in a closely related discipline, such as physics or mathematics, may be admitted on conditional and/or provisional status. These students will be required to complete certain undergraduate and/or graduate courses before they can attain regular full graduate standing status. The graduate committee determines these courses on an individual basis.)

Have a minimum overall grade point average (GPA) of 3.50 (A = 4.00) for their B.S. degree in Electrical or Computer Engineering a closely related field.

Post-Bachelor, Æós Integrated BS-PHED Track:

The Integrated BS-PHED Track program allows UNLV undergraduate students who applied up to 9 credits of UNLV electrical engineering or computer engineering graduate courses towards their UNLV B.S. in Electrical Engineering or Computer Engineering degree to complete their Ph.D. in engineering with up to 9 fewer credits than students in the Post-Bachelor, Æós Track. All requirements leading to a Ph.D. are still required beyond the B.S. Degree in Electrical and Computer Engineering excluding the completion of a Master, Æós thesis.

Have a minimum overall grade point average (GPA) of 3.5 (A = 4.00) for their B.S. degree in electrical engineering or computer engineering at UNLV.

Have completed up to a maximum of 9 credits of formal Graduate College curriculum approved 600/700 level courses (which excludes informal courses such as Graduate Independent Study, Graduate Seminar, and Special Topics) which were applied towards the student, Æós B.S. degree. Each graduate level course must have been completed with a minimum grade of B (GPA) of 3.2 (A = 4.00).

The GRE entrance requirement will be waived for students entering the Ph.D. program if ALL of the following are satisfied:

The candidate receives a MS degree in Electrical and Computer Engineering (ECE) at UNLV.

The candidate, Æós BS GPA equals or exceeds 3.0.

The candidate, Æós MS GPA equals or exceeds 3.6.

The candidate shows evidence that a paper pertaining to his/her research has been published in a refereed conference (minimum requirement). A published article in a refereed journal exceeds this minimum requirement. In all cases, the candidate must be the first author of the publication. Galley proofs along with a letter of acceptance may be used as minimum evidence that a paper will be published.

The candidate is not seeking a teaching assistantship.

One strong letter of recommendation from the major professor indicating the student, Æós ability for higher education.
Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Post-Master's Track

Total Credits Required: 45

Course Requirements

Major Field Courses, 6-15 Credits:

- Complete 6-15 credits of coursework in an approved major in a single area in Electrical and Computer Engineering with a minimum overall average GPA of 3.33.
  - Communications
    - ECG 662 - Advanced Digital Communications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 760 - Random Processes in Engineering Problems
    - ECG 762 - Detection and Estimation of Signals in Noise
  - Computer Engineering
    - ECG 600 - Computer Communication Networks
    - ECG 603 - Embedded Systems Design
    - ECG 604 - Modern Processor Architecture
    - ECG 605 - Data Compression Systems
    - ECG 607 - Biometrics
    - ECG 608 - Digital Design Verification and Testing
    - ECG 700 - Advanced Computer System Architecture
    - ECG 701 - Reliable Design of Digital Systems
    - ECG 702 - Interconnection Networks for Parallel Processing Applications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 706 - Analysis of Telecommunication and Data Networks
    - ECG 707 - Logic Synthesis Engineering
    - ECG 709 - Synthesis and Optimization of Digital Systems
  - Control Systems Theory
    - ECG 672 - Digital Control Systems
    - ECG 674 - Recent Topics in Control
    - ECG 770 - Linear Systems Theory
    - ECG 771 - Optimal and Modern Controls
    - ECG 772 - Nonlinear Systems I
    - ECG 774 - Stochastic Control
    - ECG 776 - Adaptive Control
  - Electromagnetics and Optics
    - ECG 630 - Transmission Lines
    - ECG 631 - Engineering Optics
    - ECG 632 - Antenna Engineering
    - ECG 633 - Active and Passive Microwave Engineering
    - ECG 730 - Advanced Engineering Electromagnetics I
    - ECG 731 - Theoretical Techniques in Electromagnetics
    - ECG 732 - Advanced Engineering Electromagnetics II
    - ECG 733 - Plasma I
o Electronics
  ▪ ECG 620 - Analog Integrated Circuit Design
  ▪ ECG 621 - Digital Integrated Circuit Design
  ▪ ECG 720 - Advanced Analog IC Design
  ▪ ECG 721 - Memory Circuit Design
  ▪ ECG 722 - Mixed-Signal Circuit Design

o Power Engineering
  ▪ ECG 642 - Power Electronics
  ▪ ECG 646 - Photovoltaic Devices and Systems
  ▪ ECG 740 - Computer Analysis Methods for Power Systems
  ▪ ECG 741 - Electric Power Distribution System Engineering
  ▪ ECG 742 - Power System Stability and Control

o Signal Processing
  ▪ ECG 680 - Discrete-Time Signal Processing
  ▪ ECG 762 - Detection and Estimation of Signals in Noise
  ▪ ECG 781 - Digital Filters
  ▪ ECG 782 - Multidimensional Digital Signal Processing
  ▪ ECG 783 - Adaptive Signal Processing with Neural Networks

o Solid State Electronics
  ▪ ECG 651 - Electronic and Magnetic Materials and Devices
  ▪ ECG 652 - Optoelectronics
  ▪ ECG 653 - Introduction to Nanotechnology
  ▪ ECG 750 - Optical Electronics I
  ▪ ECG 752 - Physical Electronics
  ▪ ECG 753 - Advanced Topics in Semiconductor Devices I
  ▪ ECG 755 - Monolithic Integrated Circuit Fabrication
  ▪ ECG 756 - Advanced Topics in Semiconductor Devices II
  ▪ ECG 757 - Electron Transport Phenomena in Solid State Devices

Minor Fields Courses, 6-18 Credits:

- Select two advisor-approved minor fields and complete coursework in each single area totaling 6-18 credits, with a minimum overall average GPA of 3.33. The secondary minor can be from a field outside Electrical Engineering.
  o Communications
    ▪ ECG 662 - Advanced Digital Communications
    ▪ ECG 704 - Coding with Applications in Computers and Communication Media
    ▪ ECG 760 - Random Processes in Engineering Problems
    ▪ ECG 762 - Detection and Estimation of Signals in Noise
    ▪ ECG 763 - Advanced Digital Communication Systems

  o Computer Engineering
    ▪ ECG 600 - Computer Communication Networks
    ▪ ECG 603 - Embedded Systems Design
    ▪ ECG 604 - Modern Processor Architecture
    ▪ ECG 605 - Data Compression Systems
    ▪ ECG 607 - Biometrics
    ▪ ECG 608 - Digital Design Verification and Testing
    ▪ ECG 700 - Advanced Computer System Architecture
    ▪ ECG 701 - Reliable Design of Digital Systems
    ▪ ECG 702 - Interconnection Networks for Parallel Processing Applications
    ▪ ECG 704 - Coding with Applications in Computers and Communication Media
    ▪ ECG 706 - Analysis of Telecommunication and Data Networks
    ▪ ECG 707 - Logic Synthesis Engineering
    ▪ ECG 709 - Synthesis and Optimization of Digital Systems

  o Control Systems Theory
- ECG 770 - Linear Systems Theory
- ECG 771 - Optimal and Modern Controls
- ECG 772 - Nonlinear Systems I

Electromagnetics and Optics
- ECG 630 - Transmission Lines
- ECG 631 - Engineering Optics
- ECG 632 - Antenna Engineering
- ECG 633 - Active and Passive Microwave Engineering
- ECG 730 - Advanced Engineering Electromagnetics I
- ECG 731 - Theoretical Techniques in Electromagnetics
- ECG 732 - Advanced Engineering Electromagnetics II
- ECG 733 - Plasma I

Electronics
- ECG 620 - Analog Integrated Circuit Design
- ECG 621 - Digital Integrated Circuit Design
- ECG 720 - Advanced Analog IC Design
- ECG 721 - Memory Circuit Design
- ECG 722 - Mixed-Signal Circuit Design

Power Engineering
- ECG 642 - Power Electronics
- ECG 646 - Photovoltaic Devices and Systems
- ECG 740 - Computer Analysis Methods for Power Systems
- ECG 741 - Electric Power Distribution System Engineering
- ECG 742 - Power System Stability and Control

Signal Processing
- ECG 680 - Discrete-Time Signal Processing
- ECG 762 - Detection and Estimation of Signals in Noise
- ECG 781 - Digital Filters

Solid State Electronics
- ECG 651 - Electronic and Magnetic Materials and Devices
- ECG 652 - Optoelectronics
- ECG 653 - Introduction to Nanotechnology
- ECG 750 - Optical Electronics I
- ECG 752 - Physical Electronics
- ECG 753 - Advanced Topics in Semiconductor Devices I
- ECG 755 - Monolithic Integrated Circuit Fabrication
- ECG 756 - Advanced Topics in Semiconductor Devices II
- ECG 757 - Electron Transport Phenomena in Solid State Devices

Elective Courses, Ai Credits: 0-12
- Complete 0-12 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.

Dissertation, Ai Credits: 18
- ECG 799 - Dissertation

**Degree Requirements**

- All Ph.D. students must satisfy the Ph.D. degree program admission requirements and be admitted to the Ph.D. program on a regular status.
- Complete a minimum of 27 credits of graduate level courses (excluding dissertation credits) with an overall minimum GPA of 3.20 and a minimum GPA of 2.70 (B-) in each class applied towards the 27 credits. The final division of major, minor, and elective credits will be determined in consultation with the student's advisor.
• Of the 27 required credits, a minimum of 18 credits must be in 700-level courses. Of these 18 credits, a minimum of 15 must be from formal courses. The student’s doctoral advisory committee may add more requirements in accordance with the individual, student’s background and field of study.

• No more than 3 credits may be from Graduate Independent Study together with Graduate Seminar. No more than 6 credits of a combination of informal courses such as Graduate Independent Study, Special Topics, and Seminar may be applied to the degree program.

• Beyond the Bachelor degree, a Ph.D. student must complete a minimum of 15 credits in an approved ECE major field, 9 credits an approved ECE minor (primary minor) field, and 9 credits in a second approved open minor (secondary minor) field. Of the 15 credits required in the ECE major field, a minimum of 9 credits must be completed in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in the major field. Of the 9 required credits in each minor field, a minimum of 6 credits must be in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in each of the minor fields.

• Informal courses (Graduate Independent Study, Graduate Seminar, and Special Topics) cannot be applied to the ECE major, ECE minor (primary minor) and the open minor (secondary minor) fields.

• At the time of admission or no later than the first semester, the Ph.D. candidate must formally petition BOTH the graduate college and the ECE graduate committee to accept transfer credits and credits taken as a non-degree seeking graduate student to be applied to the Ph.D. program.

• All regular (full graduate standing) status graduate students must select a faculty advisor in their first semester.

• Maintain a minimum overall grade point average (GPA) of 3.20, must maintain a minimum GPA of 3.20 each semester, and must complete all graduate level courses that apply towards their degree with a minimum GPA of 2.70 (B-) in each course. Grades below B- cannot be applied towards the Ph.D. degree and must be repeated or replaced. A class grade below C (2.0) is grounds for initiating a program separation recommendation to the Graduate College. Ph.D. candidates who do not maintain an overall minimum GPA of 3.2, who do not maintain a minimum GPA of 3.2 each semester, or who earn more than one grade below B- will be placed on academic probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee in conjunction with the Graduate College will determine the terms of the student’s probation based upon the student’s academic record and in accordance with the rules of the Graduate College.

• All regular (full graduate standing) status graduate students must file an approved program before the completion of their third semester. This program must be approved by the student, advisor and the graduate coordinator. All regular and provisional status graduate students must show satisfactory progress towards completion of their degree by completing at least six credits of their approved program per calendar year. If their progress towards their degree program is not satisfactory, students will either be put on probation or expelled from the program.

• Before beginning a dissertation, students must have their dissertation topic approved by their advisor, and the necessary paperwork including a dissertation prospectus must be filed with the Graduate College by the end of the third semester. The dissertation prospectus describes the dissertation topic and must include an introductory set of sentences, a well formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take dissertation credits until their prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.

Graduation Requirements

See Plan Graduation Requirements below.

Subplan 2 Requirements: Post-Bachelor's Track

Total Credits Required: 69
Course Requirements

Major Field Courses - Credits: 15

- Complete 15 credits of coursework in an approved major in a single area in Electrical and Computer Engineering with a minimum overall GPA of 3.33. A minimum of 9 credits must be in 700-level courses.
  - Communications
    - ECG 662 - Advanced Digital Communications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 760 - Random Processes in Engineering Problems
    - ECG 762 - Detection and Estimation of Signals in Noise
  - Computer Engineering
    - ECG 600 - Computer Communication Networks
    - ECG 603 - Embedded Systems Design
    - ECG 604 - Modern Processor Architecture
    - ECG 605 - Data Compression Systems
    - ECG 607 - Biometrics
    - ECG 608 - Digital Design Verification and Testing
    - ECG 700 - Advanced Computer System Architecture
    - ECG 701 - Reliable Design of Digital Systems
    - ECG 702 - Interconnection Networks for Parallel Processing Applications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 706 - Analysis of Telecommunication and Data Networks
    - ECG 707 - Logic Synthesis Engineering
    - ECG 709 - Synthesis and Optimization of Digital Systems
  - Control Systems Theory
    - ECG 672 - Digital Control Systems
    - ECG 674 - Recent Topics in Control
    - ECG 770 - Linear Systems Theory
    - ECG 771 - Optimal and Modern Controls
    - ECG 772 - Nonlinear Systems I
    - ECG 774 - Stochastic Control
    - ECG 776 - Adaptive Control
  - Electromagnetics and Optics
    - ECG 630 - Transmission Lines
    - ECG 631 - Engineering Optics
    - ECG 632 - Antenna Engineering
    - ECG 633 - Active and Passive Microwave Engineering
    - ECG 730 - Advanced Engineering Electromagnetics I
    - ECG 731 - Theoretical Techniques in Electromagnetics
    - ECG 732 - Advanced Engineering Electromagnetics II
    - ECG 733 - Plasma I
  - Electronics
    - ECG 620 - Analog Integrated Circuit Design
    - ECG 621 - Digital Integrated Circuit Design
    - ECG 720 - Advanced Analog IC Design
    - ECG 721 - Memory Circuit Design
    - ECG 722 - Mixed-Signal Circuit Design
  - Power Engineering
    - ECG 642 - Power Electronics
    - ECG 646 - Photovoltaic Devices and Systems
    - ECG 740 - Computer Analysis Methods for Power Systems
    - ECG 741 - Electric Power Distribution System Engineering
    - ECG 742 - Power System Stability and Control
  - Signal Processing
- ECG 680 - Discrete-Time Signal Processing
- ECG 762 - Detection and Estimation of Signals in Noise
- ECG 781 - Digital Filters
- ECG 782 - Multidimensional Digital Signal Processing
- ECG 783 - Adaptive Signal Processing with Neural Networks

- Solid State Electronics
  - ECG 651 - Electronic and Magnetic Materials and Devices
  - ECG 652 - Optoelectronics
  - ECG 653 - Introduction to Nanotechnology
  - ECG 750 - Optical Electronics I
  - ECG 752 - Physical Electronics
  - ECG 753 - Advanced Topics in Semiconductor Devices I
  - ECG 755 - Monolithic Integrated Circuit Fabrication
  - ECG 756 - Advanced Topics in Semiconductor Devices II
  - ECG 757 - Electron Transport Phenomena in Solid State Devices

Minor Fields Courses, 18 credits:

Select two advisor-approved minor fields and complete 9 credits of coursework in each single area with a minimum overall average GPA of 3.33. A minimum of 6 credits in each area must be in 700-level courses. The secondary minor can be from a field outside Electrical Engineering.

- Communications
  - ECG 662 - Advanced Digital Communications
  - ECG 704 - Coding with Applications in Computers and Communication Media
  - ECG 760 - Random Processes in Engineering Problems
  - ECG 762 - Detection and Estimation of Signals in Noise

- Computer Engineering
  - ECG 600 - Computer Communication Networks
  - ECG 603 - Embedded Systems Design
  - ECG 604 - Modern Processor Architecture
  - ECG 605 - Data Compression Systems
  - ECG 607 - Biometrics
  - ECG 608 - Digital Design Verification and Testing
  - ECG 700 - Advanced Computer System Architecture
  - ECG 701 - Reliable Design of Digital Systems
  - ECG 702 - Interconnection Networks for Parallel Processing Applications
  - ECG 704 - Coding with Applications in Computers and Communication Media
  - ECG 706 - Analysis of Telecommunication and Data Networks
  - ECG 707 - Logic Synthesis Engineering
  - ECG 709 - Synthesis and Optimization of Digital Systems

- Control Systems Theory
  - ECG 770 - Linear Systems Theory
  - ECG 771 - Optimal and Modern Controls
  - ECG 772 - Nonlinear Systems I

- Electromagnetics and Optics
  - ECG 630 - Transmission Lines
  - ECG 631 - Engineering Optics
  - ECG 632 - Antenna Engineering
  - ECG 633 - Active and Passive Microwave Engineering
  - ECG 730 - Advanced Engineering Electromagnetics I
  - ECG 731 - Theoretical Techniques in Electromagnetics
  - ECG 732 - Advanced Engineering Electromagnetics II
  - ECG 733 - Plasma I

- Electronics
  - ECG 620 - Analog Integrated Circuit Design
• ECG 621 - Digital Integrated Circuit Design
• ECG 720 - Advanced Analog IC Design
• ECG 721 - Memory Circuit Design
• ECG 722 - Mixed-Signal Circuit Design

○ Power Engineering
  • ECG 642 - Power Electronics
  • ECG 646 - Photovoltaic Devices and Systems
  • ECG 740 - Computer Analysis Methods for Power Systems
  • ECG 741 - Electric Power Distribution System Engineering
  • ECG 742 - Power System Stability and Control

○ Signal Processing
  • ECG 680 - Discrete-Time Signal Processing
  • ECG 762 - Detection and Estimation of Signals in Noise
  • ECG 781 - Digital Filters
  ○ Solid State Electronics
  • ECG 651 - Electronic and Magnetic Materials and Devices
  • ECG 652 - Optoelectronics
  • ECG 653 - Introduction to Nanotechnology
  • ECG 750 - Optical Electronics I
  • ECG 752 - Physical Electronics
  • ECG 753 - Advanced Topics in Semiconductor Devices I
  • ECG 755 - Monolithic Integrated Circuit Fabrication
  • ECG 756 - Advanced Topics in Semiconductor Devices II
  • ECG 757 - Electron Transport Phenomena in Solid State Devices

• 700-Level Elective Courses, Ā credits: 12
  ○ Complete 12 credits of 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.

• Elective Courses, Ā credits: 6
  ○ Complete 6 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.

• Dissertation, Ā credits: 18
  ○ ECG 799 - Dissertation

**Degree Requirements**

• All Ph.D. students must satisfy the Ph.D. degree program admission requirements and be admitted to the Ph.D. program on a regular status.

• Complete a minimum of 51 credits (24 M.S.E. credits + 27 Post-Master, Āōs Track credits) of graduate level courses (excluding dissertation credits) with an overall minimum GPA of 3.20 and a minimum GPA of 2.70 (B-) in each class applied towards the 27 credits.

• Of the 51 required credits, a minimum of 33 credits must be in 700-level courses. Of these 33 credits, a minimum of 30 must be from formal courses. The student, Āōs doctoral advisory committee may add more requirements in accordance with the individual, Āōs background and field of study.

• No more than 6 credits may be from Graduate Independent Study together with Graduate Seminar. No more than 12 credits of a combination of informal courses such as Graduate Independent Study, Special Topics, and Seminar may be applied to the degree program.

• Complete a minimum of 15 credits in an approved ECE major field, 9 credits an approved ECE minor (primary minor) field, and 9 credits in a second approved open minor (secondary minor) field. Of the 15 credits required in the ECE major field, a minimum of 9 credits must be completed in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in the major field. Of the 9 required credits in each minor field, a minimum of 6 credits must be in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in each of the minor fields.

• Informal courses (Graduate Independent Study, Graduate Seminar, and Special Topics) cannot be applied to the ECE major, ECE minor (primary minor) and the open minor (secondary minor) fields.
• At the time of admission or no later than the first semester, the Ph.D. candidate must formally petition BOTH the graduate college and the ECE graduate committee to accept transfer credits and credits taken as a non-degree seeking graduate student to be applied to the Ph.D. program.
• All regular (full graduate standing) status graduate students must select a faculty advisor in their first semester.
• Students on academic probation may be transferred to the M.S.E. Program depending on the student's academic record. In such a case, the M.S.E. Program requirements must be satisfied. For example, only 6 credits of the informal courses may be applied to the M.S.E. degree program with the further constraint that up to 3 credits total of Independent Study in combination with Graduate Seminar may be in the 6 credits.
• Maintain a minimum overall grade point average (GPA) of 3.20, must maintain a minimum GPA of 3.20 each semester, and must complete all graduate level courses that apply towards their degree with a minimum GPA of 2.70 (B-) in each course. Grades below B- cannot be applied towards the Ph.D. degree and must be repeated or replaced. A class grade below C (2.0) is grounds for initiating a program separation recommendation to the Graduate College. Ph.D. candidates who do not maintain an overall minimum GPA of 3.2, who do not maintain a minimum GPA of 3.2 each semester, or who earn more than one grade below B- will be placed on academic probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee and/or the Graduate College will determine the terms of the student's probation in accordance with the rules of the Graduate College.
• All regular status graduate students must file an approved program before the completion of their third semester. This program must be approved by the student, advisor and the graduate coordinator. All regular and provisional status graduate students must show satisfactory progress towards completion of their degree by completing at least six credits of their approved program per calendar year. If their progress towards their degree program is not satisfactory, students will either be put on probation or expelled from the program.
• Before beginning a dissertation, students must have their dissertation topic approved by their advisor, and the necessary paper work including a dissertation prospectus must be filed with the Graduate College by the end of the third semester. The dissertation prospectus describes the dissertation topic and must include an introductory set of sentences, a well formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take dissertation credits until their prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.

Graduation Requirements

See Plan Graduation Requirements below.

Subplan 3 Requirements: Post-Bachelor's Integrated BS-PHD Track

Total Credits Required: 60-66

Course Requirements

Major Field Courses, Ai Credits: 6-15

• Complete 6-15 credits of coursework in an approved major in a single area in Electrical and Computer Engineering with a minimum overall GPA of 3.33.
  o Communications
    ▪ ECG 662 - Advanced Digital Communications
    ▪ ECG 704 - Coding with Applications in Computers and Communication Media
    ▪ ECG 760 - Random Processes in Engineering Problems
    ▪ ECG 762 - Detection and Estimation of Signals in Noise
  o Computer Engineering
- ECG 600 - Computer Communication Networks
- ECG 603 - Embedded Systems Design
- ECG 604 - Modern Processor Architecture
- ECG 605 - Data Compression Systems
- ECG 607 - Biometrics
- ECG 608 - Digital Design Verification and Testing
- ECG 700 - Advanced Computer System Architecture
- ECG 701 - Reliable Design of Digital Systems
- ECG 702 - Interconnection Networks for Parallel Processing Applications
- ECG 704 - Coding with Applications in Computers and Communication Media
- ECG 706 - Analysis of Telecommunication and Data Networks
- ECG 707 - Logic Synthesis Engineering
- ECG 709 - Synthesis and Optimization of Digital Systems

○ Control Systems Theory
- ECG 672 - Digital Control Systems
- ECG 674 - Recent Topics in Control
- ECG 770 - Linear Systems Theory
- ECG 771 - Optimal and Modern Controls
- ECG 772 - Nonlinear Systems I
- ECG 774 - Stochastic Control
- ECG 776 - Adaptive Control

○ Electromagnetics and Optics
- ECG 630 - Transmission Lines
- ECG 631 - Engineering Optics
- ECG 632 - Antenna Engineering
- ECG 633 - Active and Passive Microwave Engineering
- ECG 730 - Advanced Engineering Electromagnetics I
- ECG 731 - Theoretical Techniques in Electromagnetics
- ECG 732 - Advanced Engineering Electromagnetics II
- ECG 733 - Plasma I

○ Electronics
- ECG 620 - Analog Integrated Circuit Design
- ECG 621 - Digital Integrated Circuit Design

    - ECG 755 - Monolithic Integrated Circuit Fabrication
    - ECG 756 - Advanced Topics in Semiconductor Devices II
    - ECG 757 - Electron Transport Phenomena in Solid State Devices
- Elective Courses, Ai Credits: 9-18
  - Complete 9-18 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.
- Dissertation, Ai Credits: 18
  - ECG 799 - Dissertation

Degree Requirements

- All Ph.D. students must satisfy the Ph.D. degree program admission requirements and be admitted to the Ph.D. program on a regular status.
- Total credits required depends on the total number of approved graduate-level course work taken as technical electives (with a grade of B or better) during the senior year.
- Complete a minimum of 60, 63, or 66 credits (including dissertation credits) respectively corresponding to 9, 6, or 3 credits of formally approved graduate level courses applied toward the B.S. degree yielding a total of 69 course credits. The final division of major, minor, and elective credits will be determined in consultation with the student, Advisor.
- Of the 69 required credits, a minimum of 33 credits must be in 700-level courses. Of these 33 credits, a minimum of 30 must be from formal courses. The student, Advisor's doctoral advisory committee may add more requirements in accordance with the individual, Advisor's background and field of study.
- No more than 6 credits may be from Graduate Independent Study together with Graduate Seminar. No more than 12 credits of a combination of informal courses such as Graduate Independent Study, Special Topics, and Seminar may be applied to the degree program.
- Complete a minimum of 15 credits in an approved ECE major field, 9 credits an approved ECE minor (primary minor) field, and 9 credits in a second approved open minor (secondary minor) field. Of the 15 credits required in the ECE major field, a minimum of 9 credits must be completed in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in the major field. Of the 9 required credits in each minor field, a minimum of 6 credits must be in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in each of the minor fields.
- Informal courses (Graduate Independent Study, Graduate Seminar, and Special Topics) cannot be applied to the ECE major, ECE minor (primary minor) and the open minor (secondary minor) fields.
- All regular (full graduate standing) status graduate students must select a faculty advisor in their first semester.
- Students on academic probation may be transferred to the M.S.E. Program depending on the student, Advisor's academic record. In such a case, the M.S.E. Program requirements must be satisfied. For example, only 6 credits of the informal courses may be applied to the M.S.E. degree program with the further constraint that up to 3 credits total of Independent Study in combination with Graduate Seminar may be in the 6 credits.
- Maintain a minimum overall grade point average (GPA) of 3.20, must maintain a minimum GPA of 3.20 each semester, and must complete all graduate level courses that apply towards their degree with a minimum GPA of 2.70 (B-) in each course. Grades below B- cannot be applied towards the Ph.D. degree and must be repeated or replaced. A class grade below C (2.0) is grounds for initiating a program separation recommendation to the Graduate College. Ph.D. candidates who do not maintain an overall minimum GPA of 3.20, who do not maintain a GPA of 3.20 each semester, or who earn more than one grade below B- will either be placed on probation or expelled from the program. The Electrical and
Computer Engineering Graduate Committee and/or the Graduate College will determine the terms of the student’s probation in accordance with the rules of the Graduate College.

- All regular status graduate students must file an approved program before the completion of their third semester. This program must be approved by the student’s advisor and the graduate coordinator. All regular and provisional status graduate students must show satisfactory progress towards completion of their degree by completing at least six credits of their approved program per calendar year. If their progress towards their degree program is not satisfactory, students will either be put on probation or expelled from the program.

- Before beginning a dissertation, students must have their dissertation topic approved by their advisor, and the necessary paperwork including a dissertation prospectus must be filed with the Graduate College by the end of the third semester. The dissertation prospectus describes the dissertation topic and must include an introductory set of sentences, a well-formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take dissertation credits until their prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.

**Graduation Requirements**

See Plan Graduation Requirements below.

**Plan Graduation Requirements**

During the first semester, a Ph.D. student must select a faculty advisor. The faculty advisor does not have to be the one to whom the student was assigned upon entering the Ph.D. program. In coordination with the faculty advisor, the student must also form a doctoral advisory committee. A doctoral advisory committee is composed of at least four members of the UNLV Graduate Faculty. Three of the faculty must be from the Department of Electrical and Computer Engineering. The fourth from a relevant supporting field having Full Graduate Faculty Status as recognized by the Graduate College.

Students admitted on provisional and/or conditional status are not allowed to take the qualifying exam until their provisions and/or conditions have been met. Students taking the exam while on provisional or conditional status will be required to retake the exam regardless if one or all areas of the exam have been passed.

Provisional status students must complete all required supplementary work within one calendar year from the time of admission into the program with a grade of B (3.0) or better in each course.

Pass the Qualifying Exam within 2 semesters of being admitted to the Ph.D. program on a regular (full graduate standing) status. The Qualifying Exam is offered once every fall semester and once every spring semester. This exam cannot be taken more than twice.

The Qualifying Exam tests the student’s general undergraduate knowledge of electrical engineering and computer engineering. To register for the Qualifying Exam, eligible students must notify the graduate coordinator no later than one month prior to the examination date.

All students must pass the Qualifying Exam within the first two semesters (excluding the summer semester) upon being admitted to the Ph.D. program on a regular status. If a student is required to take the qualifying exam and is not present to sit the exam, an automatic FAIL is assigned. Students who have not passed the Qualifying Exam within this time frame will be terminated from the Ph.D. program. Students who have not passed the Qualifying Exam by their second attempt will be terminated from the Ph.D. program. Students in the Direct Ph.D. program who fail the Qualifying Exam on their second attempt within the two semester time frame may elect to pursue a M.S. Degree by completing all of the requirements listed for that degree.
The Qualifying Exam is a four and one-half hour exam covering questions in the following undergraduate electrical and computer engineering fields:

- Communications
- Control System Theory
- Electromagnetics and Optics
- Electronics
- Power
- Signal Processing
- Solid State
- Digital Logic Design
- Computer Architectures and Organization
- Digital Electronics and VLSI Design
- Computer Communication Networks

To pass the qualifying exam requirement, the student must successfully complete any four of the eleven areas with a grade of PASS to complete the qualifying exam requirement within two sittings. If the student passes less than four areas on the first attempt, the student will receive a PASS for those individual areas successfully completed and will not be required to retake these areas on the second attempt. The exam is a closed note, closed book exam.

For more details on course specifics, exam logistics, appeal rights and procedure, and protocols regarding the qualifying exam, refer to the ECE department's Electrical Engineering Graduate Program Document.

In all Post-Bachelor, Åös Tracks, a Ph.D. student must complete a minimum of 15 credits in an approved ECE major field in a single area of Electrical and Computer Engineering, 9 credits in an approved ECE minor field (primary minor) in a single but different area of Electrical and Computer Engineering, and another 9 credits in a second approved minor (secondary minor) field. Currently, the Department of Electrical and Computer Engineering at UNLV offers Communications, Computer Engineering, Control System Theory, Electromagnetics and Optics, Electronics, Power Systems, Signal Processing, and Solid State Materials and Devices as major fields. Specific courses that can be applied to specific fields are listed in detail in the Electrical Engineering Graduate Program Document.

Of the 15 credits required in the ECE major field, a minimum of 9 credits must be completed in 700-level courses. To complete the ECE major field requirement, the applied 15 credits of ECE major course work must attain a minimum overall GPA of 3.33 (B+=3.30).

Each student must complete two minor fields. To complete a minor field, a student must complete a minimum of 9 credits in a minor field and have an overall minimum GPA of 3.33 (B+=3.30) for the 9 minor field credits. Of the 9 required credits in each minor field, a minimum of 6 credits must be in 700-level courses. Courses that can be applied to specific minor fields are listed in detail in the Electrical Engineering Graduate Program Document. These courses may be applied to any designated field but may only be counted once. With the written approval of the major advisor and the student, Åös advisory committee, the secondary minor may be a mixed minor field. A mixed minor field may be formed with courses inside and/or outside of the Electrical Engineering Department, Åös approved fields (e.g., mathematics and physics, computer engineering and computer science, physics, mechanical engineering, solid state and electromagnetics) A mixed minor may not be composed of courses in the Electrical Engineering Department that satisfy course work in the major and the other minor field. The only exception is when a course may be used in more than one field. In this case, the course may not be counted twice but may be used for either minor area. However, the student must complete at least one minor field (primary minor field) in Electrical Engineering in a single area.

After passing the Qualifying Exam, successfully completing all courses for a major field, and successfully completing all courses for the ECE minor field, students are eligible to take the Comprehensive Exam. All students must have passed the Comprehensive Exam within two semesters after successfully completing all required course
work except for the 18 credits Dissertation. [NOTE: Up to 6 credits of Dissertation taken prior to the successful completion of the Preliminary Exam may count towards the degree program.] The Comprehensive Exam cannot be taken more than once per semester and cannot be taken more than twice.

The Comprehensive Exam tests the candidate’s depth of knowledge in the candidate’s chosen ECE major field and chosen ECE minor (primary minor) field. All students must have passed the Comprehensive Exam within two semesters after successfully completing all required course work (except for the 18 credits of Dissertation). The Comprehensive Exam is offered once every fall semester and once every spring semester. The Comprehensive Exam cannot be taken more than twice. Candidates who have not passed the Comprehensive Exam within this time frame (two consecutive sittings) will be terminated from the Ph.D. program. Candidates who have not passed the Comprehensive Exam following their second attempt will be terminated from the Ph.D. program.

Before a student is eligible to register for the Comprehensive Exam, the candidate must have obtained regular (full graduate standing) admission status, passed the Qualifying Exam, and must have successfully completed all of the course requirements for the ECE major field and the ECE minor (primary minor) field. The student must have acquired a minimum GPA of 3.33 in both the major and minor fields separately. If the minor field GPA is less than 3.33 and/or the major field GPA is less than 3.33, then the minor and/or minor field requirement has not been successfully completed. The candidate will not be allowed to take the Comprehensive Exam until both the major and minor 3.33 GPA requirements are fulfilled. Further, the student must have a minimum overall GPA of 3.2 and must have satisfied all other Ph.D. degree program admission requirements. If a student takes the Comprehensive Exam before any one of these requirements has been satisfied, the student will automatically receive a FAIL grade for the exam. At their discretion, the Graduate Committee may also count this failing grade as one of the student’s attempts for the Comprehensive Exam. To register for the Comprehensive Exam, eligible students must notify the graduate coordinator no later than one month prior to the examination date.

To pass the Comprehensive Exam, a student must pass a five-hour exam covering courses in his/her ECE major field and ECE minor (primary minor) field. A pass or fail grade will be given for the exam. The graduate committee will notify students of the results of the exam. The major and minor area exam will emphasize graduate coursework taken in the ECE major and ECE minor (primary minor; minor 1) fields. The exam will evaluate the student’s ability to apply his/her theoretical and analytical abilities to problems in his/her ECE major and ECE minor (primary minor) field. However, the exam may require knowledge of undergraduate material related to the student’s major and minor fields. Students should expect problems that require advanced thinking. Specific problems need not be familiar textbook problems nor may the student be necessarily familiar with the problem. A pass or fail grade will be given for the exam. The graduate committee will notify students of the exam results.

For more details on course specifics, exam logistics, appeal rights and procedure, and protocols regarding the comprehensive exam, refer to the ECE department’s Electrical Engineering Graduate Program Document.

After successfully completing all required course work and passing the Comprehensive Exam, the candidate must pass the Preliminary Exam. The Preliminary Exam cannot be taken more than once per semester but may be repeated until passed.

The Preliminary Exam evaluates the caliber of a student’s dissertation topic. The Preliminary Exam cannot be taken more than once per semester but may be repeated until passed.

To be eligible for the Preliminary Exam, a student must have passed the Comprehensive Exam, and have successfully completed all required course work except for the 18 credits of Dissertation.

Before the Preliminary Exam, a student must prepare a 10 to 20-page prospectus of his/her research. A copy of this prospectus must be submitted to the Graduate Committee and each member of the Ph.D. candidate’s advisory committee at least two weeks prior to the Preliminary Exam.
The student must also notify the Graduate Committee and each member of their advisory committee of the date, time and location of their Preliminary Exam. This must be done at least two weeks prior to the Preliminary Exam.

During the Preliminary Exam, the student presents his/her prospectus to his advisory committee. To pass the Preliminary Exam, the student’s advisory committee must unanimously approve the student’s prospectus. Students who pass the Preliminary Exam are advanced to candidacy for the Ph.D.

Complete a minimum of 18 credits of Dissertation and complete a dissertation containing original research. Upon completion, the student must pass the Final Exam in which the student defends his/her dissertation. The Final Exam is the culminating experience of the PhD program.

The Final Exam evaluates the Ph.D. candidate’s dissertation. The Final Exam cannot be taken more than once per every three months but may be repeated until passed. To be eligible for the Final Exam, a Ph.D. candidate must have passed the Preliminary Exam, and have successfully completed all required course work including a minimum of 18 credits of Dissertation. A minimum of 12 credits of Dissertation must be taken after the successful completion of the Preliminary Exam. A copy of the Ph.D. candidate’s dissertation must be submitted to the Graduate Committee and each member of the Ph.D. candidate’s advisory committee at least two weeks prior to the Final Exam. The Ph.D. candidate must also notify the Graduate Committee and each member of his/her advisory committee of the date, time, and location of his/her Final Exam at least two weeks prior to the Final Exam. During the Final Exam, the Ph.D. candidate will present his/her dissertation to their advisory committee. To pass the Final Exam, the Ph.D. candidate’s advisory committee must unanimously approve the Ph.D. candidate’s dissertation.

The Department of Electrical and Computer Engineering requires that the Ph.D. degree be completed within a period of six years from the time the candidate is fully admitted to the Ph.D. program. Further, courses taken more than six years prior to graduation cannot be applied toward the PhD degree without permission from the Graduate College. Students exceeding this time limit must formally write a letter requesting permission from both the Graduate Committee and the Graduate College to stay in the Ph.D. program and apply coursework towards the degree program. The formal letter must explain the circumstances of why the degree was not completed within the allotted time frame and indicate the extended period of time needed to complete the degree.

The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.

The student must submit and successfully defend his/her dissertation by the posted deadline. The defense must be advertised and is open to the public.

Student must submit his/her approved, properly formatted hard-copy dissertation to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.
Dual Degree: Master of Science in Engineering - Electrical Engineering & Master of Science - Mathematical Sciences

The dual M.S.E. - Electrical Engineering and the M.S. - Mathematical Sciences program is designed for those who want to pursue the M.S.E. degree in Electrical Engineering or a career in Electrical Engineering with emphasis in applied Mathematics. The program prepares graduate students with complementing educational components covering electrical engineering and mathematics, which is the basis of all engineering. The students graduating from this program will be well-prepared with a well-rounded background.

The Department of Electrical and Computer Engineering at UNLV offers a number of program options leading to the M.S.E. degree in the Field of Electrical Engineering. Specific major areas of study currently available include: Communications, Computer Engineering, Control System Theory, Electromagnetics and Optics, Electronics, Power Systems, Signal Processing, and Solid State Materials and Devices.

Learning Outcomes

Master of Science in Engineering - Electrical Engineering

Master of Science - Mathematical Sciences

Plan Admission Requirements

All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Applicants must satisfy the minimum requirements of the M.S.E. - Electrical Engineering program and the M.S. - Mathematical Sciences program. If denied by one program, the applicant will have the option of proceeding with a single degree program with departmental approval.

Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Standard Track

Total Credits Required: 54-57

Course Requirements

- Required Courses, 6 Credits:
  - Complete two of the following courses:
    - MAT 707 - Real Analysis I
    - MAT 709 - Complex Function Theory I
    - MAT 765 - Advanced Numerical Analysis
- Elective Courses, 21-24 Credits
- Students completing the exam option must complete a minimum of 24 credits of MAT or STA elective courses (excluding MAT 711 & 712), and students completing the thesis option must complete a minimum
of 21 credits of MAT or STA elective courses (excluding MAT 711 & 712). Other graduate-level courses may be taken with advisor-approval.

- **Thesis** , Âí Credits: 6 (Optional)
  - Complete 6 credits from one of the following courses:
    - MAT 791 - Thesis
    - STA 791 - Thesis

**Total Credits Required for the Electrical Engineering M.S.E.: 30**

- **Core Courses** , Âí Credits: 9
- Complete a minimum of 3 credits in at least three of the following areas. Students in the comprehensive exam track must take all courses at the 700-level.
  - **Communications**
    - ECG 662 - Advanced Digital Communications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 760 - Random Processes in Engineering Problems
    - ECG 762 - Detection and Estimation of Signals in Noise
  - **Computer Engineering**
    - ECG 600 - Computer Communication Networks
    - ECG 603 - Embedded Systems Design
    - ECG 604 - Modern Processor Architecture
    - ECG 605 - Data Compression Systems
    - ECG 607 - Biometrics
    - ECG 608 - Digital Design Verification and Testing
    - ECG 700 - Advanced Computer System Architecture
    - ECG 701 - Reliable Design of Digital Systems
    - ECG 702 - Interconnection Networks for Parallel Processing Applications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 706 - Analysis of Telecommunication and Data Networks
    - ECG 707 - Logic Synthesis Engineering
    - ECG 709 - Synthesis and Optimization of Digital Systems
  - **Control Systems Theory**
    - ECG 672 - Digital Control Systems
    - ECG 674 - Recent Topics in Control
    - ECG 770 - Linear Systems Theory
    - ECG 771 - Optimal and Modern Controls
    - ECG 772 - Nonlinear Systems I
    - ECG 774 - Stochastic Control
    - ECG 776 - Adaptive Control
  - **Electromagnetics and Optics**
    - ECG 630 - Transmission Lines
    - ECG 631 - Engineering Optics
    - ECG 632 - Antenna Engineering
    - ECG 633 - Active and Passive Microwave Engineering
    - ECG 730 - Advanced Engineering Electromagnetics I
    - ECG 731 - Theoretical Techniques in Electromagnetics
    - ECG 732 - Advanced Engineering Electromagnetics II
    - ECG 733 - Plasma I
  - **Electronics**
    - ECG 620 - Analog Integrated Circuit Design
    - ECG 621 - Digital Integrated Circuit Design
    - ECG 720 - Advanced Analog IC Design
    - ECG 721 - Memory Circuit Design
    - ECG 722 - Mixed-Signal Circuit Design
  - **Power Engineering**
- ECG 642 - Power Electronics
- ECG 646 - Photovoltaic Devices and Systems
- ECG 740 - Computer Analysis Methods for Power Systems
- ECG 741 - Electric Power Distribution System Engineering
- ECG 742 - Power System Stability and Control

- Signal Processing
  - ECG 680 - Discrete-Time Signal Processing
  - ECG 762 - Detection and Estimation of Signals in Noise
  - ECG 781 - Digital Filters
  - ECG 782 - Multidimensional Digital Signal Processing
  - ECG 783 - Adaptive Signal Processing with Neural Networks

- Solid State Electronics
  - ECG 651 - Electronic and Magnetic Materials and Devices
  - ECG 652 - Optoelectronics
  - ECG 653 - Introduction to Nanotechnology
  - ECG 750 - Optical Electronics I
  - ECG 752 - Physical Electronics
  - ECG 753 - Advanced Topics in Semiconductor Devices I
  - ECG 755 - Monolithic Integrated Circuit Fabrication
  - ECG 756 - Advanced Topics in Semiconductor Devices II
  - ECG 757 - Electron Transport Phenomena in Solid State Devices

- Additional Core Courses, A: Credits: 9-12
  - Complete 9-12 credits of additional core courses from the core courses in any of the areas listed above. Students in the comprehensive exam track must take all courses at the 700-level.
  - Students completing the comprehensive exam option must complete a minimum of 12 credits of electives, and students completing the thesis option must complete a minimum of 9 credits of electives.

- Elective Courses, A: Credits: 6-9
  - Complete a minimum of 6-9 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.
  - Students completing the comprehensive exam option must complete a minimum of 9 credits of electives, and students completing the thesis option must complete a minimum of 6 credits of electives.
  - Thesis, A: Credits: 6 (Optional)
    - ECG 797 - Electrical Engineering Thesis

Total Credits Shared: 6

Two courses can be double counted between Electrical Engineering M.S.E and Mathematical Sciences M.S. degrees. Non-ECG courses must be applied towards non-ECG elective credits in the electrical engineering degree program pursued.

Degree Requirements

- A minimum of 54 or 57 credits (including thesis credits) of graduate work is required for the Dual Electrical Engineering M.S.E and Mathematical Sciences M.S. which corresponds to the choice of completing a Mathematics comprehensive exam or thesis.
- Two of the courses included in the degree program can be double counted Electrical Engineering M.S.E and Mathematical Sciences M.S. degrees. Non-ECG courses must be applied towards non-ECG electives credits in the electrical engineering degree program pursued.
- If a thesis option is chosen: In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be
added at the student and department’s discretion. Please see Graduate College policy for committee appointment guidelines.

**Mathematical Sciences M.S.**

Students completing a thesis must complete a minimum of 33 credit hours with a minimum GPA of 3.00.

Students completing the comprehensive exam must complete a minimum of 30 credit hours with a minimum GPA of 3.00.

21 credits of mathematics coursework must be at the 700-level (excluding thesis).

A student will be placed on academic probation if a minimum of 3.00 GPA is not maintained in all work taken in the degree program. A grade of C or less in one graduate-level course will cause a student to be placed on academic probation and will elicit a critical review of the student’s program by the Graduate Studies Committee.

The Graduate College requires a minimum of 50 percent of the total credits required to complete the graduate degree, exclusive of transferred credits and/or the thesis, must be earned at UNLV after admission to a graduate degree program.

Students must complete a final examination. This will be either an examination to defend the thesis or a written comprehensive examination based on requirements 1 and 2.

**Electrical Engineering M.S.E.**

Students must satisfy the M.S.E. - Electrical Engineering degree program admission requirements and be admitted to the M.S.E. - Electrical Engineering program with regular full graduate standing status, having met all conditions and provisions.

Students must complete a minimum of 30 credits of graduate level courses with an overall minimum GPA of 3.00 (B), a minimum GPA of 3.00 (B) each semester, and a minimum GPA of 2.70 (B-) in each class applied towards the 30 credits. Grades below B- are not counted towards the M.S.E. degree and must be repeated or replaced.

Students who do not maintain an overall GPA of 3.00 (B), a GPA of 3.00 (B) each semester, or who earn more than one grade below B- will either be placed on probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee and/or the Graduate College will determine the terms of the student’s probation in accordance with the rules of the Graduate College.

At the time of admission or no later than the first semester, the candidate must formally petition BOTH the graduate college and the ECE graduate committee to accept transfer credits and credits taken as a non-degree seeking graduate student to be applied to the M.S.E. program.

Students must select a faculty advisor in their first semester.

No more than 3 credits may be from Independent Study (which cumulatively includes Graduate Seminar) and no more than a total of 6 credits of the combination of Independent Study, Graduate Seminar, and Graduate Special Topics may be applied towards the M.S.E. degree program.

Students completing a Thesis:
A minimum of 18 core (formal) must be in core electrical engineering courses, of which 15 credits must be 700-level. This excludes Thesis, and informal courses (such as Special Topics, Graduate Seminar, and Independent Study).

Students must complete at least six credits of Electrical Engineering Thesis which culminates in the successful completion of a thesis oral exam and the submission of an approved thesis. Although Electrical Engineering Thesis can be taken repeatedly, no more than 6 credits can be applied towards the 30 credits required for the M.S.E. degree.

Before beginning a thesis, students must have their thesis topic approved by their advisor, and the necessary paper work must be filed with the Graduate College. The thesis prospectus describes the thesis topic and must include an introductory set of sentences, a well formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take thesis credits until their thesis prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.

The student must complete a thesis containing original research and publically defend it before his/her advisory committee at the Thesis Exam.

Prior to the student’s defense of the thesis before his/her advisory committee, the student must submit a complete copy of the thesis to each member of his/her advisory committee. This submission must occur at least two weeks prior to the date of the oral defense. The student must also notify each member of his/her advisory committee of the date, time and location of the oral defense of the thesis or project at least two weeks in advance.

Students who plan to continue their studies beyond the M.S.E. degree program are strongly encouraged to select this option.

A full graduate standing master, Åös degree candidate who is interested in pursuing a doctoral degree may be allowed to take the Ph.D. qualifying exam without penalty during his/her period as an M.S.E. student. The exam may be taken as many times as desired but no more than once a semester at the time the exam is typically offered. The M.S.E. candidate must pass four areas of choice in a single sitting to satisfy the Qualifying Exam requirement. If the student successfully completes the Qualifying Exam requirement while pursuing the M.S.E. degree in Electrical Engineering with a thesis option in the Electrical and Computer Engineering department at UNLV, the student will have automatically fulfilled the Qualifying Exam requirement upon admission to the Ph.D. program in the Electrical and Computer Engineering program at UNLV. Once the student receives an M.S.E. degree in the field of Electrical Engineering, the student must abide by the requirements outlined in the Ph.D. program. This option is not available to non-degree students.

Students completing the Comprehensive Exam:

A minimum of 21 credits must be in core (formal) electrical engineering 700-level courses excluding informal courses (such as Independent Study, Graduate Seminar, and Special Topics).

Pass a comprehensive exam on graduate level coursework in the student’s specialty area.

The exam may be taken in the last two semesters of the student’s M.S.E. program.

The student may not take the exam until all course work pertaining to the exam is completed. For clarity, students enrolled in courses pertaining to the comprehensive exam cannot take the comprehensive exam. Within the six year limit, the exam may be repeated until passed but cannot be taken more than once per semester. Prior to the end of the first week of classes in the student, Åös last two semesters, the student must announce to the ECE Graduate Coordinator his/her intention of taking the exam, the major field to be examined, and at least two courses taken in that field.
The Course Only Option is a final advanced professional degree option in that students who complete the Course Only Option will not be considered for admission into any of the department’s Ph.D. program options.

**Graduation Requirements**

- Students cannot graduate from one portion of the dual degree until the requirements for both are met.
  Students must apply to graduate from both programs for the same semester.
- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.

**Mathematical Sciences M.S.**

The student must successfully complete a culminating experience.

If the exam option is chosen, the student must successfully pass a final comprehensive examination.

If the thesis option is chosen, the student must:

  Submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.

  Submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

**Electrical Engineering M.S.E.**

The student must successfully complete a culminating experience.

If the exam option is chosen, the student must pass a final comprehensive examination.

If the thesis option is chosen, the student must:

  Submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.

  Submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

**Subplan 2 Requirements: Integrated BS-MS Track**

Total Credits Required: 45-54

**Course Requirements**

Total Credits Required for the Mathematical Sciences M.S.: 30-33

- Required Courses, Āi Credits: 6
  - Complete two of the following courses:
    - MAT 707 - Real Analysis I
- MAT 709 - Complex Function Theory I
- MAT 765 - Advanced Numerical Analysis

- Elective Courses, Credits: 21-24
- Students completing the exam option must complete a minimum of 24 credits of MAT or STA elective courses (excluding MAT 711 & 712), and students completing the thesis option must complete a minimum of 21 credits of MAT or STA elective courses (excluding MAT 711 & 712). Other graduate-level courses may be taken with advisor-approval.
- Thesis, Credits: 6 (Optional)
  - Complete 6 credits from one of the following courses:
    - MAT 791 - Thesis
    - STA 791 - Thesis

Total Credits Required for the Electrical Engineering M.S.E.: 21-27

- Core Courses, Credits: 0-9
- Complete a minimum of 0-3 credits in at least three of the following areas:
  - Communications
    - ECG 662 - Advanced Digital Communications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 760 - Random Processes in Engineering Problems
    - ECG 762 - Detection and Estimation of Signals in Noise
  - Computer Engineering
    - ECG 600 - Computer Communication Networks
    - ECG 603 - Embedded Systems Design
    - ECG 604 - Modern Processor Architecture
    - ECG 605 - Data Compression Systems
    - ECG 607 - Biometrics
    - ECG 608 - Digital Design Verification and Testing
    - ECG 700 - Advanced Computer System Architecture
    - ECG 701 - Reliable Design of Digital Systems
    - ECG 702 - Interconnection Networks for Parallel Processing Applications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 706 - Analysis of Telecommunication and Data Networks
    - ECG 707 - Logic Synthesis Engineering
    - ECG 709 - Synthesis and Optimization of Digital Systems
  - Control Systems Theory
    - ECG 672 - Digital Control Systems
    - ECG 674 - Recent Topics in Control
    - ECG 770 - Linear Systems Theory
    - ECG 771 - Optimal and Modern Controls
    - ECG 772 - Nonlinear Systems I
    - ECG 774 - Stochastic Control
    - ECG 776 - Adaptive Control
  - Electromagnetics and Optics
    - ECG 630 - Transmission Lines
    - ECG 631 - Engineering Optics
    - ECG 632 - Antenna Engineering
    - ECG 633 - Active and Passive Microwave Engineering
    - ECG 730 - Advanced Engineering Electromagnetics I
    - ECG 731 - Theoretical Techniques in Electromagnetics
    - ECG 732 - Advanced Engineering Electromagnetics II
    - ECG 733 - Plasma I
  - Electronics
    - ECG 620 - Analog Integrated Circuit Design
    - ECG 621 - Digital Integrated Circuit Design
- ECG 720 - Advanced Analog IC Design
- ECG 721 - Memory Circuit Design
- ECG 722 - Mixed-Signal Circuit Design
  
  **Power Engineering**
  - ECG 642 - Power Electronics
  - ECG 646 - Photovoltaic Devices and Systems
  - ECG 740 - Computer Analysis Methods for Power Systems
  - ECG 741 - Electric Power Distribution System Engineering
  - ECG 742 - Power System Stability and Control
  
  **Signal Processing**
  - ECG 680 - Discrete-Time Signal Processing
  - ECG 762 - Detection and Estimation of Signals in Noise
  - ECG 781 - Digital Filters
  - ECG 782 - Multidimensional Digital Signal Processing
  - ECG 783 - Adaptive Signal Processing with Neural Networks
  
  **Solid State Electronics**
  - ECG 651 - Electronic and Magnetic Materials and Devices
  - ECG 652 - Optoelectronics
  - ECG 653 - Introduction to Nanotechnology
  - ECG 750 - Optical Electronics I
  - ECG 752 - Physical Electronics
  - ECG 753 - Advanced Topics in Semiconductor Devices I
  - ECG 755 - Monolithic Integrated Circuit Fabrication
  - ECG 756 - Advanced Topics in Semiconductor Devices II
  - ECG 757 - Electron Transport Phenomena in Solid State Devices
  
  - **Additional Core Courses, Ai Credits: 0-9**
    - Complete 0-9 credits of additional core courses from the core courses in any of the areas listed above.
  
  - **Elective Courses, Ai Credits: 0-6**
    - Complete 0-6 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.
  
  - **Thesis, Ai Credits: 6**
    - ECG 797 - Electrical Engineering Thesis

**Total Credits Shared: 6**

Two courses can be double counted between Electrical Engineering M.S.E and Mathematical Sciences M.S. degrees. Non-ECG courses must be applied towards non-ECG elective credits in the electrical engineering degree program pursued.

**Degree Requirements**

- A minimum of 45, 48, 51, or 54 credits (including thesis credits) of graduate work is required for the Dual Electrical Engineering M.S.E and Mathematical Sciences M.S. which corresponds to the choice of completing a Mathematics comprehensive exam or thesis, and the number of credits of formally approved graduate level courses applied toward the B.S. degree and used in the Electrical Engineering Integrated BS-MS Track.
- Two of the courses included in the degree program can be double counted Electrical Engineering M.S.E and Mathematical Sciences M.S. degrees. Non-ECG courses must be applied towards non-ECG elective credits in the electrical engineering degree program pursued.
Mathematical Sciences M.S.

Students completing a thesis must complete a minimum of 33 credit hours with a minimum GPA of 3.00.

Students completing the comprehensive exam must complete a minimum of 30 credit hours with a minimum GPA of 3.00.

21 credits of mathematics course work must be at the 700-level (excluding thesis)

A student will be placed on academic probation if a minimum of 3.00 GPA is not maintained in all work taken in the degree program. A grade of C or less in one graduate-level course will cause a student to be placed on academic probation and will elicit a critical review of the student's program by the Graduate Studies Committee.

The Graduate College requires a minimum of 50 percent of the total credits required to complete the graduate degree, exclusive of transferred credits and/or the thesis, must be earned at UNLV after admission to a graduate degree program.

Students must complete a final examination. This will be either an examination to defend the thesis or a written comprehensive examination based on requirements 1 and 2.

If the thesis option is chosen: In consultation with his/her advisor, a student will organize a dissertation committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department's discretion. Please see Graduate College policy for committee appointment guidelines.

Electrical Engineering M.S.E.

Students must satisfy the M.S.E. - Electrical Engineering degree program admission requirements and be admitted to the M.S.E. - Electrical Engineering program with regular full graduate standing status, having met all conditions and provisions.

Total credits required depends on the total number of approved graduate-level course work taken as technical electives (with a grade of B or better) during the senior year.

Complete a minimum of 21, 24, or 27 credits (including thesis credits) in the Integrated BS-MS track program respectively corresponding to 9, 6, or 3 credits of formally approved graduate level courses applied toward the B.S. degree yielding a total of 30 course credits. The final division of major, minor, and elective credits will be determined in consultation with the student's advisor.

Students must complete all courses with an overall minimum GPA of 3.00 (B), a minimum GPA of 3.00 (B) each semester, and a minimum GPA of 2.70 (B-) in each class applied towards the 30 credits. Grades below B- are not counted towards the M.S.E. degree and must be repeated or replaced.

Students who do not maintain an overall GPA of 3.00 (B), a GPA of 3.00 (B) each semester, or who earn more than one grade below B- will either be placed on probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee and/or the Graduate College will determine the terms of the student's probation in accordance with the rules of the Graduate College.

At the time of admission or no later than the first semester, the candidate must formally petition BOTH the graduate college and the ECE graduate committee to accept transfer credits and credits taken as a non-degree seeking graduate student to be applied to the M.S.E. program.
Students must select a faculty advisor in their first semester.

A minimum of 18 credits must be in core (formal) electrical engineering courses, of which 15 credits must be 700-level. This excludes Thesis credits, and informal courses (such as Special Topics, Graduate Seminar, and Independent Study).

No more than 3 credits may be from Independent Study (which cumulatively includes Graduate Seminar) and no more than a total of 6 credits of the combination of Independent Study, Graduate Seminar, and Graduate Special Topics may be applied towards the M.S.E. degree program.

In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department, Aós discretion. Please see Graduate College policy for committee appointment guidelines.

Students must complete a thesis.

Students must complete at least 6 credits of Thesis which culminates in the successful completion of a thesis oral exam and the submission of an approved thesis. Although Electrical Engineering Thesis can be taken repeatedly, no more than 6 credits can be applied towards the 30 credits required for the M.S.E. degree.

Before beginning a thesis, students must have their thesis topic approved by their advisor, and the necessary paper work must be filed with the Graduate College. The thesis prospectus describes the thesis topic and must include an introductory set of sentences, a well formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take thesis credits until their thesis prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.

The student must complete a thesis containing original research and publically defend it before his/her advisory committee at the Thesis Exam.

Prior to the student, Aós defense of the thesis before his/her advisory committee, the student must submit a complete copy of the thesis to each member of his/her advisory committee. This submission must occur at least two weeks prior to the date of the oral defense. The student must also notify each member of his/her advisory committee of the date, time and location of the oral defense of the thesis or project at least two weeks in advance.

Students who plan to continue their studies beyond the M.S.E. degree program are strongly encouraged to select this option.

A full graduate standing master, Aós degree candidate who is interested in pursuing a doctoral degree may be allowed to take the Ph.D. qualifying exam without penalty during his/her period as an M.S.E. student. The exam may be taken as many times as desired but no more than once a semester at the time the exam is typically offered. The M.S.E. candidate must pass four areas of choice in a single sitting to satisfy the Qualifying Exam requirement. If the student successfully completes the Qualifying Exam requirement while pursuing the M.S.E. degree in Electrical Engineering with a thesis option in the Electrical and Computer Engineering department at UNLV, the student will have automatically fulfilled the Qualifying Exam requirement upon admission to the Ph.D. program in the Electrical and Computer Engineering program at UNLV. Once the student receives an M.S. degree in the field of Electrical Engineering, the student must abide by the requirements outlined in the Ph.D. program. This option is not available to non-degree students.

Graduation Requirements
• Students cannot graduate from one portion of the dual degree until the requirements for both are met. Students must apply to graduate from both programs for the same semester.
• The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.

Mathematical Sciences M.S.

The student must successfully complete a culminating experience.

If the exam option is chosen, the student must successfully pass a final comprehensive examination.

If the thesis option is chosen, the student must:

Submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.

Submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Electrical Engineering M.S.E.

The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.

The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Plan Graduation Requirements

Refer to your subplan for Graduation Requirements.

• Subplan 1: Standard Track
• Subplan 2: Integrated BS-MS Track

Dual Degree: Doctor of Philosophy - Electrical Engineering & Master of Science - Mathematical Sciences

The dual Ph.D. EE and M.S. MAT program of study is designed for those who want to pursue a Ph.D. degree in Electrical Engineering or a career in Electrical Engineering with emphasis in applied mathematics. The program prepares graduate students with complementing educational components covering electrical engineering and mathematics, which is the basis of all engineering.
The culminating experience in the Ph.D. program in the Department of Electrical and Computer Engineering is centered about developing new knowledge focused around a specific theme embodied in the form a well-written and orally defended dissertation. The Department of Electrical and Computer Engineering at UNLV offers a number of program options leading to the Ph.D. degree in the Field of Electrical Engineering. Specific major areas of study currently available include: Communications, Computer Engineering, Control System Theory, Electromagnetics and Optics, Electronics, Power Systems, Signal Processing, and Solid State Materials and Devices.

**Plan Admissions Requirements**

Applicants are considered on an individual basis. All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Applicants must satisfy the minimum requirements of the Ph.D., Electrical Engineering program, and the M.S., Mathematics program. If denied by one program, the applicant will have the option of proceeding with a single degree program with departmental approval.

**Plan Requirements**

See Subplan Requirements below.

**Subplan 1 Requirements: Post-Master's Track**

Total Credits Required: 69-72

**Course Requirements**

Total Credits Required for the Mathematical Sciences M.S.: 30-33

- Required Courses, 6 Credits:
  - Complete two of the following courses:
    - MAT 707 - Real Analysis I
    - MAT 709 - Complex Function Theory I
    - MAT 765 - Advanced Numerical Analysis

- Elective Courses, 21-24 Credits:
  - Students completing the exam option must complete a minimum of 24 credits of MAT or STA elective courses (excluding MAT 711 & 712), and students completing the thesis option must complete a minimum of 21 credits of MAT or STA elective courses (excluding MAT 711 & 712). Other graduate-level courses may be taken with advisor-approval.

- Thesis, 6 Credits (Optional)
  - Complete 6 credits from one of the following courses:
    - MAT 791 - Thesis
    - STA 791 - Thesis

Total Credits Required for the Electrical Engineering Ph.D.: 45

- Major Field Courses, 6-15 Credits:
  - Complete 6-15 credits of coursework in an approved major in a single area in Electrical and Computer Engineering with a minimum overall average GPA of 3.33.
    - Communications
      - ECG 662 - Advanced Digital Communications
      - ECG 704 - Coding with Applications in Computers and Communication Media

  o Elective Courses, Â¡ Credits: 0-12
    - Complete 0-12 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.
  o Dissertation, Â¡ Credits: 18
    - ECG 799 - Dissertation

Total Credits Shared: 6

Two courses can be double counted between Electrical Engineering Ph.D. and Mathematical Sciences M.S. degrees. Non-ECG courses must be applied towards non-ECG elective credits in the electrical engineering degree program pursued.

Degree Requirements

- A minimum 69 or 72 credits (including thesis and dissertation credits) is required for the Dual Electrical Engineering Ph.D. and Mathematical Sciences M.S. which corresponds to the choice of completing a Mathematics comprehensive exam or thesis.
- Two of the courses included in the degree program can be double counted in the Electrical Engineering Ph.D. and Mathematical Sciences M.S. degrees. Non-ECG courses must be applied towards non-ECG elective credits in the electrical engineering degree program pursued.

Mathematical Sciences M.S.

Students completing a thesis must complete a minimum of 33 credit hours with a minimum GPA of 3.00.

Students completing the comprehensive exam must complete a minimum of 30 credit hours with a minimum GPA of 3.00.

For the master, Âµs degree 21 credits of mathematics course work must be at the 700-level (excluding thesis).

A student will be placed on academic probation if a minimum of 3.00 GPA is not maintained in all work taken in the degree program. A grade of C or less in one graduate-level course will cause a student to be placed on academic probation and will elicit a critical review of the student, Âµs program by the Graduate Studies Committee.

The Graduate College requires a minimum of 50 percent of the total credits required to complete the graduate degree, exclusive of transferred credits and/or the thesis, must be earned at UNLV after admission to a graduate degree program.

Students must complete a final examination. This will be either an examination to defend the thesis or a written comprehensive examination based on requirements 1 and 2.
If the thesis option is chosen: In consultation with his/her advisor, a student will organize a dissertation committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department, Aôs discretion. Please see Graduate College policy for committee appointment guidelines.

**Electrical Engineering Ph.D.**

All Ph.D. students must satisfy the Ph.D. degree program admission requirements and be admitted to the Ph.D. program on a regular status.

Complete a minimum of 27 credits of graduate level courses (excluding dissertation credits) with an overall minimum GPA of 3.20 and a minimum GPA of 2.70 (B-) in each class applied towards the 27 credits. The final division of major, minor, and elective credits will be determined in consultation with the student, Aôs advisor.

Of the 27 required credits, a minimum of 18 credits must be in 700-level courses. Of these 18 credits, a minimum of 15 must be from formal courses. The student, Aôs doctoral advisory committee may add more requirements in accordance with the individual, Aôs background and field of study.

No more than 3 credits may be from Graduate Independent Study together with Graduate Seminar. No more than 6 credits of a combination of informal courses such as Graduate Independent Study, Special Topics, and Seminar may be applied to the degree program.

Beyond the Bachelor degree, a Ph.D. student must complete a minimum of 15 credits in an approved ECE major field, 9 credits an approved ECE minor (primary minor) field, and 9 credits in a second approved open minor (secondary minor) field. Of the 15 credits required in the ECE major field, a minimum of 9 credits must be completed in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in the major field. Of the 9 required credits in each minor field, a minimum of 6 credits must be in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in each of the minor fields.

Informal courses (Graduate Independent Study, Graduate Seminar, and Special Topics) cannot be applied to the ECE major, ECE minor (primary minor) and the open minor (secondary minor) fields.

At the time of admission or no later than the first semester, the Ph.D. candidate must formally petition BOTH the graduate college and the ECE graduate committee to accept transfer credits and credits taken as a non-degree seeking graduate student to be applied to the Ph.D. program.

All regular (full graduate standing) status graduate students must select a faculty advisor in their first semester.

Maintain a minimum overall grade point average (GPA) of 3.20, must maintain a minimum GPA of 3.20 each semester, and must complete all graduate level courses that apply towards their degree with a minimum GPA of 2.70 (B-) in each course. Grades below B- cannot be applied towards the Ph.D. degree and must be repeated or replaced. A class grade below C (2.0) is grounds for initiating a program separation recommendation to the Graduate College. Ph.D. candidates who do not maintain an overall minimum GPA of 3.2, who do not maintain a minimum GPA of 3.2 each semester, or who earn more than one grade below B- will be placed on academic probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee in conjunction with the Graduate College will determine the terms of the student, Aôs probation based upon the student, Aôs academic record and in accordance with the rules of the Graduate College.

All regular (full graduate standing) status graduate students must file an approved program before the completion of their third semester. This program must be approved by the student, Aôs advisor and the graduate coordinator. All regular and provisional status graduate students must show satisfactory progress towards completion of their degree by completing at least six credits of their approved program per calendar year. If their progress towards their degree program is not satisfactory, students will either be put on probation or expelled from the program.
Before beginning a dissertation, students must have their dissertation topic approved by their advisor, and the necessary paperwork including a dissertation prospectus must be filed with the Graduate College by the end of the third semester. The dissertation prospectus describes the dissertation topic and must include an introductory set of sentences, a well-formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take dissertation credits until their prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.

Graduation Requirements

See Plan Graduation Requirements below.

Subplan 2 Requirements: Post-Bachelor's Track

Total Credits Required: 93-96

Course Requirements

Total Credits Required for the Mathematical Sciences M.S.: 30-33

- Required Courses, Credits: 6
  - Complete two of the following courses:
    - MAT 707 - Real Analysis I
    - MAT 709 - Complex Function Theory I
    - MAT 765 - Advanced Numerical Analysis

- Elective Courses, Credits: 21-24
  - Students completing the exam option must complete a minimum of 24 credits of MAT or STA elective courses (excluding MAT 711 & 712), and students completing the thesis option must complete a minimum of 21 credits of MAT or STA elective courses (excluding MAT 711 & 712). Other graduate-level courses may be taken with advisor-approval.

- Thesis, Credits: 6 (Optional)
- Complete 6 credits from one of the following courses:
  - MAT 791 - Thesis
  - STA 791 - Thesis

Total Credits Required for the Electrical Engineering Ph.D.: 69

- Major Field Courses, Credits: 15
- Complete 15 credits of coursework in an approved major in a single area in Electrical and Computer Engineering with a minimum overall GPA of 3.33. A minimum of 9 credits must be in 700-level courses.
  - Communications
    - ECG 662 - Advanced Digital Communications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 760 - Random Processes in Engineering Problems
    - ECG 762 - Detection and Estimation of Signals in Noise
  - Computer Engineering
    - ECG 600 - Computer Communication Networks
    - ECG 603 - Embedded Systems Design
    - ECG 604 - Modern Processor Architecture
    - ECG 605 - Data Compression Systems
    - ECG 607 - Biometrics
    - ECG 608 - Digital Design Verification and Testing
    - ECG 700 - Advanced Computer System Architecture

In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department, A&S discretion. Please see Graduate College policy for committee appointment guidelines.
Electrical Engineering Ph.D.

All Ph.D. students must satisfy the Ph.D. degree program admission requirements and be admitted to the Ph.D. program on a regular status.

Complete a minimum of 51 credits (24 M.S.E. credits + 27 Post-Master, Aos Track credits) of graduate level courses (excluding dissertation credits) with an overall minimum GPA of 3.20 and a minimum GPA of 2.70 (B-) in each class applied towards the 27 credits.

Of the 51 required credits, a minimum of 33 credits must be in 700-level courses. Of these 33 credits, a minimum of 30 must be from formal courses. The student’s doctoral advisory committee may add more requirements in accordance with the individual, Aos background and field of study.

No more than 6 credits may be from Graduate Independent Study together with Graduate Seminar. No more than 12 credits of a combination of informal courses such as Graduate Independent Study, Special Topics, and Seminar may be applied to the degree program.

Complete a minimum of 15 credits in an approved ECE major field, 9 credits an approved ECE minor (primary minor) field, and 9 credits in a second approved open minor (secondary minor) field. Of the 15 credits required in the ECE major field, a minimum of 9 credits must be completed in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in the major field. Of the 9 required credits in each minor field, a minimum of 6 credits must be in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in each of the minor fields.

Informal courses (Graduate Independent Study, Graduate Seminar, and Special Topics) cannot be applied to the ECE major, ECE minor (primary minor) and the open minor (secondary minor) fields.

At the time of admission or no later than the first semester, the Ph.D. candidate must formally petition BOTH the graduate college and the ECE graduate committee to accept transfer credits and credits taken as a non-degree seeking graduate student to be applied to the Ph.D. program.

All regular (full graduate standing) status graduate students must select a faculty advisor in their first semester.

Students on academic probation may be transferred to the M.S.E. Program depending on the student, Aos academic record. In such a case, the M.S.E. Program requirements must be satisfied. For example, only 6 credits of the informal courses may be applied to the M.S.E. degree program with the further constraint that up to 3 credits total of Independent Study in combination with Graduate Seminar may be in the 6 credits.

Maintain a minimum overall grade point average (GPA) of 3.20, must maintain a minimum GPA of 3.20 each semester, and must complete all graduate level courses that apply towards their degree with a minimum GPA of 2.70 (B-) in each course. Grades below B- cannot be applied towards the Ph.D. degree and must be repeated or replaced. A class grade below C (2.0) is grounds for initiating a program separation recommendation to the Graduate College. Ph.D. candidates who do not maintain an overall minimum GPA of 3.2, who do not maintain a minimum GPA of 3.2 each semester, or who earn more than one grade below B- will be placed on academic probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee and/or the Graduate College will determine the terms of the student, Aos probation in accordance with the rules of the Graduate College.

All regular status graduate students must file an approved program before the completion of their third semester. This program must be approved by the student, Aos advisor and the graduate coordinator. All regular and provisional status graduate students must show satisfactory progress towards completion of their degree by completing at least six credits of their approved program per calendar year. If their progress towards their degree program is not satisfactory, students will either be put on probation or expelled from the program.
Before beginning a dissertation, students must have their dissertation topic approved by their advisor, and the necessary paper work including a dissertation prospectus must be filed with the Graduate College by the end of the third semester. The dissertation prospectus describes the dissertation topic and must include an introductory set of sentences, a well formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take dissertation credits until their prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.

Graduation Requirements

See Plan Graduation Requirements below.

Subplan 3 Requirements: Post-Bachelor's Integrated BS-PHD Track

Total Credits Required: 84-93

Course Requirements

Total Credits Required for the Mathematical Sciences M.S.: 30-33

- Required Courses, Åi Credits: 6
  - Complete two of the following courses:
    - MAT 707 - Real Analysis I
    - MAT 709 - Complex Function Theory I
    - MAT 765 - Advanced Numerical Analysis
- Elective Courses, Åi Credits: 21-24
- Students completing the exam option must complete a minimum of 24 credits of MAT or STA elective courses (excluding MAT 711 & 712), and students completing the thesis option must complete a minimum of 21 credits of MAT or STA elective courses (excluding MAT 711 & 712). Other graduate-level courses may be taken with advisor-approval.
- Thesis, Åi Credits: 6 (Optional)
- Complete 6 credits from one of the following courses:
  - MAT 791 - Thesis
  - STA 791 - Thesis

Total Credits Required for the Electrical Engineering Ph.D.: 60-66

- Major Field Courses, Åi Credits: 6-15
- Complete 6-15 credits of coursework in an approved major in a single area in Electrical and Computer Engineering with a minimum overall GPA of 3.33.
  - Communications
    - ECG 662 - Advanced Digital Communications
    - ECG 704 - Coding with Applications in Computers and Communication Media
    - ECG 760 - Random Processes in Engineering Problems
    - ECG 762 - Detection and Estimation of Signals in Noise
  - Computer Engineering
    - ECG 600 - Computer Communication Networks
    - ECG 603 - Embedded Systems Design
    - ECG 604 - Modern Processor Architecture
    - ECG 605 - Data Compression Systems
    - ECG 607 - Biometrics
- ECG 608 - Digital Design Verification and Testing
- ECG 700 - Advanced Computer System Architecture
- ECG 701 - Reliable Design of Digital Systems
- ECG 702 - Interconnection Networks for Parallel Processing Applications
- ECG 704 - Coding with Applications in Computers and Communication Media
- ECG 706 - Analysis of Telecommunication and Data Networks
- ECG 707 - Logic Synthesis Engineering
- ECG 709 - Synthesis and Optimization of Digital Systems

  o Control Systems Theory
    - ECG 672 - Digital Control Systems
    - ECG 674 - Recent Topics in Control
    - ECG 770 - Linear Systems Theory
    - ECG 771 - Optimal and Modern Controls
    - ECG 772 - Nonlinear Systems I
    - ECG 774 - Stochastic Control
    - ECG 776 - Adaptive Control

  o Electromagnetics and Optics
    - ECG 630 - Transmission Lines
    - ECG 631 - Engineering Optics
    - ECG 632 - Antenna Engineering
    - ECG 633 - Active and Passive Microwave Engineering
    - ECG 730 - Advanced Engineering Electromagnetics I
    - ECG 731 - Theoretical Techniques in Electromagnetics
    - ECG 732 - Advanced Engineering Electromagnetics II
    - ECG 733 - Plasma I

  o Electronics
    - ECG 620 - Analog Integrated Circuit Design
    - ECG 621 - Digital Integrated Circuit Design
    - ECG 720 - Advanced Analog IC Design
    - ECG 721 - Memory Circuit Design
    - ECG 722 - Mixed-Signal Circuit Design

  o Power Engineering
    - ECG 642 - Power Electronics
    - ECG 646 - Photovoltaic Devices and Systems
    - ECG 740 - Computer Analysis Methods for Power Systems
    - ECG 741 - Electric Power Distribution System Engineering
    - ECG 742 - Power System Stability and Control

  o Signal Processing
    - ECG 680 - Discrete-Time Signal Processing
    - ECG 762 - Detection and Estimation of Signals in Noise
    - ECG 781 - Digital Filters
    - ECG 782 - Multidimensional Digital Signal Processing
    - ECG 783 - Adaptive Signal Processing with Neural Networks

  o Solid State Electronics
    - ECG 651 - Electronic and Magnetic Materials and Devices
    - ECG 652 - Optoelectronics
    - ECG 653 - Introduction to Nanotechnology
    - ECG 750 - Optical Electronics I
    - ECG 752 - Physical Electronics
    - ECG 753 - Advanced Topics in Semiconductor Devices I
    - ECG 755 - Monolithic Integrated Circuit Fabrication
    - ECG 756 - Advanced Topics in Semiconductor Devices II
    - ECG 757 - Electron Transport Phenomena in Solid State Devices

- Minor Fields Courses, Â1 Credits: 9-18
Select two advisor-approved minor fields and complete coursework in each single area totaling 9-18 credits, with a minimum overall average GPA of 3.33. The secondary minor can be from a field outside Electrical Engineering.

- **Communications**
  - ECG 662 - Advanced Digital Communications
  - ECG 704 - Coding with Applications in Computers and Communication Media
  - ECG 760 - Random Processes in Engineering Problems
  - ECG 762 - Detection and Estimation of Signals in Noise

- **Computer Engineering**
  - ECG 600 - Computer Communication Networks
  - ECG 603 - Embedded Systems Design
  - ECG 604 - Modern Processor Architecture
  - ECG 605 - Data Compression Systems
  - ECG 607 - Biometrics
  - ECG 608 - Digital Design Verification and Testing
  - ECG 700 - Advanced Computer System Architecture
  - ECG 701 - Reliable Design of Digital Systems
  - ECG 702 - Interconnection Networks for Parallel Processing Applications
  - ECG 704 - Coding with Applications in Computers and Communication Media
  - ECG 706 - Analysis of Telecommunication and Data Networks
  - ECG 707 - Logic Synthesis Engineering
  - ECG 709 - Synthesis and Optimization of Digital Systems

- **Control Systems Theory**
  - ECG 770 - Linear Systems Theory
  - ECG 771 - Optimal and Modern Controls
  - ECG 772 - Nonlinear Systems I

- **Electromagnetics and Optics**
  - ECG 630 - Transmission Lines
  - ECG 631 - Engineering Optics
  - ECG 632 - Antenna Engineering
  - ECG 633 - Active and Passive Microwave Engineering
  - ECG 730 - Advanced Engineering Electromagnetics I
  - ECG 731 - Theoretical Techniques in Electromagnetics
  - ECG 732 - Advanced Engineering Electromagnetics II
  - ECG 733 - Plasma I

- **Electronics**
  - ECG 620 - Analog Integrated Circuit Design
  - ECG 621 - Digital Integrated Circuit Design
  - ECG 720 - Advanced Analog IC Design
  - ECG 721 - Memory Circuit Design
  - ECG 722 - Mixed-Signal Circuit Design

- **Power Engineering**
  - ECG 642 - Power Electronics
  - ECG 646 - Photovoltaic Devices and Systems
  - ECG 740 - Computer Analysis Methods for Power Systems
  - ECG 741 - Electric Power Distribution System Engineering
  - ECG 742 - Power System Stability and Control

- **Signal Processing**
  - ECG 680 - Discrete-Time Signal Processing
  - ECG 762 - Detection and Estimation of Signals in Noise
  - ECG 781 - Digital Filters

- **Solid State Electronics**
ECG 651 - Electronic and Magnetic Materials and Devices
ECG 652 - Optoelectronics
ECG 653 - Introduction to Nanotechnology
ECG 750 - Optical Electronics I
ECG 752 - Physical Electronics
ECG 753 - Advanced Topics in Semiconductor Devices I
ECG 755 - Monolithic Integrated Circuit Fabrication
ECG 756 - Advanced Topics in Semiconductor Devices II
ECG 757 - Electron Transport Phenomena in Solid State Devices

Elective Courses, Æi Credits: 9-18
  o Complete 9-18 credits of 600- or 700-level MAT, PHY, AST, CEE, CEM, ECG, EGG, CS, ME, or other advisor-approved courses.

Dissertation, Æi Credits: 18
  o ECG 799 - Dissertation

Total Credits Shared: 6

Two courses can be double counted between Electrical Engineering Ph.D. and Mathematical Sciences M.S. degrees. Non-ECG courses must be applied towards non-ECG elective credits in the electrical engineering degree program pursued.

Degree Requirements

  • A minimum of 84, 87, 90, or 93 credits (including thesis and dissertation credits) of graduate work is required for the Dual Electrical Engineering Ph.D. and Mathematical Sciences M.S. which corresponds to the choice of completing a Mathematics comprehensive exam or thesis, and the number of credits of formally approved graduate level courses applied toward the B.S. degree and used in the Electrical Engineering Integrated BS-PHD Track.

  • Two of the courses included in the degree program can be double counted Electrical Engineering M.S.E and Mathematical Sciences M.S. degrees. Non-ECG courses must be applied towards non-ECG elective credits in the electrical engineering degree program pursued.

Mathematical Sciences M.S

Students completing a thesis must complete a minimum of 33 credit hours with a minimum GPA of 3.00.

Students completing the comprehensive exam must complete a minimum of 30 credit hours with a minimum GPA of 3.00.

21 credits of mathematics course work must be at the 700-level (excluding thesis).

A student will be placed on academic probation if a minimum of 3.00 GPA is not maintained in all work taken in the degree program. A grade of C or less in one graduate-level course will cause a student to be placed on academic probation and will elicit a critical review of the student,Â’s program by the Graduate Studies Committee.

The Graduate College requires a minimum of 50 percent of the total credits required to complete the graduate degree, exclusive of transferred credits and/or the thesis, must be earned at UNLV after admission to a graduate degree program.

Students must complete a final examination. This will be either an examination to defend the thesis or a written comprehensive examination based on requirements 1 and 2.
If the thesis option is chosen: In consultation with his/her advisor, a student will organize a dissertation committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department, Aös discretion. Please see Graduate College policy for committee appointment guidelines.

**Electrical Engineering Ph.D.**

All Ph.D. students must satisfy the Ph.D. degree program admission requirements and be admitted to the Ph.D. program on a regular status.

Total credits required depends on the total number of approved graduate-level course work taken as technical electives (with a grade of B or better) during the senior year.

Complete a minimum of 60, 63, or 66 credits (including dissertation credits) respectively corresponding to 9, 6, or 3 credits of formally approved graduate level courses applied toward the B.S. degree yielding a total of 69 course credits. The final division of major, minor, and elective credits will be determined in consultation with the student, Aös advisor.

Of the 69 required credits, a minimum of 33 credits must be in 700-level courses. Of these 33 credits, a minimum of 30 must be from formal courses. The student, Aös doctoral advisory committee may add more requirements in accordance with the individual, Aös background and field of study.

No more than 6 credits may be from Graduate Independent Study together with Graduate Seminar. No more than 12 credits of a combination of informal courses such as Graduate Independent Study, Special Topics, and Seminar may be applied to the degree program.

Complete a minimum of 15 credits in an approved ECE major field, 9 credits an approved ECE minor (primary minor) field, and 9 credits in a second approved open minor (secondary minor) field. Of the 15 credits required in the ECE major field, a minimum of 9 credits must be completed in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in the major field. Of the 9 required credits in each minor field, a minimum of 6 credits must be in 700-level courses. A minimum GPA of 3.33 (B+=3.30) must be obtained in each of the minor fields.

Informal courses (Graduate Independent Study, Graduate Seminar, and Special Topics) cannot be applied to the ECE major, ECE minor (primary minor) and the open minor (secondary minor) fields.

All regular (full graduate standing) status graduate students must select a faculty advisor in their first semester.

Students on academic probation may be transferred to the M.S.E. Program depending on the student, Aös academic record. In such a case, the M.S.E. Program requirements must be satisfied. For example, only 6 credits of the informal courses may be applied to the M.S.E. degree program with the further constraint that up to 3 credits total of Independent Study in combination with Graduate Seminar may be in the 6 credits.

Maintain a minimum overall grade point average (GPA) of 3.20, must maintain a minimum GPA of 3.20 each semester, and must complete all graduate level courses that apply towards their degree with a minimum GPA of 2.70 (B-) in each course. Grades below B- cannot be applied towards the Ph.D. degree and must be repeated or replaced. A class grade below C (2.0) is grounds for initiating a program separation recommendation to the Graduate College. Ph.D. candidates who do not maintain an overall minimum GPA of 3.20, who do not maintain a GPA of 3.20 each semester, or who earn more than one grade below B- will either be placed on probation or expelled from the program. The Electrical and Computer Engineering Graduate Committee and/or the Graduate College will determine the terms of the student, Aös probation in accordance with the rules of the Graduate College.

All regular status graduate students must file an approved program before the completion of their third semester. This program must be approved by the student, Aös advisor and the graduate coordinator. All regular and provisional
status graduate students must show satisfactory progress towards completion of their degree by completing at least six credits of their approved program per calendar year. If their progress towards their degree program is not satisfactory, students will either be put on probation or expelled from the program.

Before beginning a dissertation, students must have their dissertation topic approved by their advisor, and the necessary paper work including a dissertation prospectus must be filed with the Graduate College by the end of the third semester. The dissertation prospectus describes the dissertation topic and must include an introductory set of sentences, a well formed hypothesis or hypotheses (specifically italicized in the prospectus) accompanied by a motivation, objectives with major and alternative approaches to the studies, and conjectures of possible outcomes. Students are NOT allowed to take dissertation credits until their prospectus is approved. Credits taken before the approval date will NOT count towards the degree program.

**Graduation Requirements**

See Plan Graduation Requirements below.

**Plan Graduation Requirements**

Students cannot graduate from one portion of the dual degree until the requirements for both are met. Students must apply to graduate from both programs for the same semester.

The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.

**Mathematical Sciences M.S**

The student must successfully complete a culminating experience.

If the exam option is chosen, the student must successfully pass a final comprehensive examination.

If the thesis option is chosen, the student must:

Submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.

Submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

**Electrical Engineering Ph.D.**

During the first semester, a Ph.D. student must select a faculty advisor. The faculty advisor does not have to be the one to whom the student was assigned upon entering the Ph.D. program. In coordination with the faculty advisor, the student must also form a doctoral advisory committee. A doctoral advisory committee is composed of at least four members of the UNLV Graduate Faculty. Three of the faculty must be from the Department of Electrical and Computer Engineering. The fourth from a relevant supporting field having Full Graduate Faculty Status as recognized by the Graduate College.

Students admitted on provisional and/or conditional status are not allowed to take the qualifying exam until their provisions and/or conditions have been met. Students taking the exam while on provisional or conditional status will be required to retake the exam regardless if one or all areas of the exam have been passed.
Provisional status students must complete all required supplementary work within one calendar year from the time of admission into the program with a grade of B (3.0) or better in each course.

Pass the Qualifying Exam within 2 semesters of being admitted to the Ph.D. program on a regular (full graduate standing) status. The Qualifying Exam is offered once every fall semester and once every spring semester. This exam cannot be taken more than twice.

The Qualifying Exam tests the student’s general undergraduate knowledge of electrical engineering and computer engineering. To register for the Qualifying Exam, eligible students must notify the graduate coordinator no later than one month prior to the examination date.

All students must pass the Qualifying Exam within the first two semesters (excluding the summer semester) upon being admitted to the Ph.D. program on a regular status. If a student is required to take the qualifying exam and is not present to sit the exam, an automatic FAIL is assigned. Students who have not passed the Qualifying Exam within this timeframe will be terminated from the Ph.D. program. Students who have not passed the Qualifying Exam by their second attempt will be terminated from the Ph.D. program. Students in the Direct Ph.D. program who fail the Qualifying Exam on their second attempt within the two semester timeframe may elect to pursue a M.S. Degree by completing all of the requirements listed for that degree.

The Qualifying Exam is a four and one-half hour exam covering questions in the following undergraduate electrical and computer engineering fields:

- Communications
- Control System Theory
- Electromagnetics and Optics
- Electronics
- Power
- Signal Processing
- Solid State
- Digital Logic Design
- Computer Architectures and Organization
- Digital Electronics and VLSI Design
- Computer Communication Networks

To pass the qualifying exam requirement, the student must successfully complete any four of the eleven areas with a grade of PASS to complete the qualifying exam requirement within two sittings. If the student passes less than four areas on the first attempt, the student will receive a PASS for those individual areas successfully completed and will not be required to retake these areas on the second attempt. The exam is a closed note, closed book exam.

For more details on course specifics, exam logistics, appeal rights and procedure, and protocols regarding the qualifying exam, refer to the ECE department’s Electrical Engineering Graduate Program Document.

In all Post-Bachelor, Åös Tracks, a Ph.D. student must complete a minimum of 15 credits in an approved ECE major field in a single area of Electrical and Computer Engineering, 9 credits in an approved ECE minor field (primary minor) in a single but different area of Electrical and Computer Engineering, and another 9 credits in a second approved minor (secondary minor) field. Currently, the Department of Electrical and Computer Engineering at UNLV offers Communications, Computer Engineering, Control System Theory, Electromagnetics and Optics, Electronics, Power Systems, Signal Processing, and Solid State Materials and Devices as major fields. Specific courses that can be applied to specific fields are listed in detail in the Electrical Engineering Graduate Program Document.
Of the 15 credits required in the ECE major field, a minimum of 9 credits must be completed in 700-level courses. To complete the ECE major field requirement, the applied 15 credits of ECE major course work must attain a minimum overall GPA of 3.33 (B+=3.30).

Each student must complete two minor fields. To complete a minor field, a student must complete a minimum of 9 credits in a minor field and have an overall minimum GPA of 3.33 (B+=3.30) for the 9 minor field credits. Of the 9 required credits in each minor field, a minimum of 6 credits must be in 700-level courses. Courses that can be applied to specific minor fields are listed in detail in the Electrical Engineering Graduate Program Document. These courses may be applied to any designated field but may only be counted once. With the written approval of the major advisor and the student, Åós advisory committee, the secondary minor may be a mixed minor field. A mixed minor field may be formed with courses inside and/or outside of the Electrical Engineering Department, Åós approved fields (e.g., mathematics and physics, computer engineering and computer science, physics, mechanical engineering, solid state and electromagnetics) A mixed minor may not be composed of courses in the Electrical Engineering Department that satisfy course work in the major and the other minor field. The only exception is when a course may be used in more than one field. In this case, the course may not be counted twice but may be used for either minor area. However, the student must complete at least one minor field (primary minor field) in Electrical Engineering in a single area.

After passing the Qualifying Exam, successfully completing all courses for a major field, and successfully completing all courses for the ECE minor field, students are eligible to take the Comprehensive Exam. All students must have passed the Comprehensive Exam within two semesters after successfully completing all required course work except for the 18 credits Dissertation. [NOTE: Up to 6 credits of Dissertation taken prior to the successful completion of the Preliminary Exam may count towards the degree program.] The Comprehensive Exam cannot be taken more than once per semester and cannot be taken more than twice.

The Comprehensive Exam tests the candidate, Åós depth of knowledge in the candidate, Åós chosen ECE major field and chosen ECE minor (primary minor) field. All students must have passed the Comprehensive Exam within two semesters after successfully completing all required course work (except for the 18 credits Dissertation). The Comprehensive Exam is offered once every fall semester and once every spring semester. The Comprehensive Exam cannot be taken more than twice. Candidates who have not passed the Comprehensive Exam within this timeframe (two consecutive sittings) will be terminated from the Ph.D. program. Candidates who have not passed the Comprehensive Exam following their second attempt will be terminated from the Ph.D. program.

Before a student is eligible to register for the Comprehensive Exam, the candidate must have obtained regular (full graduate standing) admission status, passed the Qualifying Exam, and must have successfully completed all of the course requirements for the ECE major field and the ECE minor (primary minor) field. The student must have acquired a minimum GPA of 3.33 in both the major and minor fields separately. If the minor field GPA is less than 3.33 and/or the major field GPA is less than 3.33, then the minor and/or minor field requirement has not been successfully completed. The candidate will not be allowed to take the Comprehensive Exam until both the major and minor 3.33 GPA requirements are fulfilled. Further, the student must have a minimum overall GPA of 3.2 and must have satisfied all other Ph.D. degree program admission requirements. If a student takes the Comprehensive Exam before any one of these requirements has been satisfied, the student will automatically receive a FAIL grade for the exam. At their discretion, the Graduate Committee may also count this failing grade as one of the student, Åós attempts for the Comprehensive Exam. To register for the Comprehensive Exam, eligible students must notify the graduate coordinator no later than one month prior to the examination date.

To pass the Comprehensive Exam, a student must pass a five-hour exam covering courses in his/her ECE major field and ECE minor (primary minor) field. A pass or fail grade will be given for the exam. The graduate committee will notify students of the results of the exam. The major and minor area exam will emphasize graduate coursework taken in the ECE major and ECE minor (primary minor; minor 1) fields. The exam will evaluate the student, Åós ability to apply his/her theoretical and analytical abilities to problems in his/her ECE major and ECE minor (primary minor) field. However, the exam may require knowledge of undergraduate material related to the student, Åós major and minor fields. Students should expect problems that require advanced thinking. Specific problems need not be familiar textbook problems nor may the student be necessarily familiar with the problem. A pass or fail grade will be given for the exam. The graduate committee will notify students of the exam results.
For more details on course specifics, exam logistics, appeal rights and procedure, and protocols regarding the comprehensive exam, refer to the ECE department’s Electrical Engineering Graduate Program Document.

After successfully completing all required course work and passing the Comprehensive Exam, the candidate must pass the Preliminary Exam. The Preliminary Exam cannot be taken more than once per semester but may be repeated until passed.

The Preliminary Exam evaluates the caliber of a student’s dissertation topic. The Preliminary Exam cannot be taken more than once per semester but may be repeated until passed.

To be eligible for the Preliminary Exam, a student must have passed the Comprehensive Exam, and have successfully completed all required course work except for the 18 credits of Dissertation.

Before the Preliminary Exam, a student must prepare a 10 to 20-page prospectus of their research. A copy of this prospectus must be submitted to the Graduate Committee and each member of the Ph.D. candidate’s advisory committee at least two weeks prior to the Preliminary Exam.

The student must also notify the Graduate Committee and each member of their advisory committee of the date, time, and location of their Preliminary Exam. This must be done at least two weeks prior to the Preliminary Exam.

During the Preliminary Exam, the student presents their prospectus to their advisory committee. To pass the Preliminary Exam, their advisory committee must unanimously approve the student’s prospectus. Students who pass the Preliminary Exam are advanced to candidacy for the Ph.D.

Complete a minimum of 18 credits of Dissertation and complete a dissertation containing original research. Upon completion, the student must pass the Final Exam in which the student defends their dissertation. The Final Exam is the culminating experience of the PhD program.

The Final Exam evaluates the Ph.D. candidate’s dissertation. The Final Exam cannot be taken more than once per every three months but may be repeated until passed. To be eligible for the Final Exam, a Ph.D. candidate must have passed the Preliminary Exam, and have successfully completed all required course work including a minimum of 18 credits of Dissertation. A minimum of 12 credits of Dissertation must be taken after the successful completion of the Preliminary Exam. A copy of the Ph.D. candidate’s dissertation must be submitted to the Graduate Committee and each member of the Ph.D. candidate’s advisory committee at least two weeks prior to the Final Exam. The Ph.D. candidate must also notify the Graduate Committee and each member of their advisory committee of the date, time, and location of their Final Exam at least two weeks prior to the Final Exam. During the Final Exam, the Ph.D. candidate will present their dissertation to their advisory committee. To pass the Final Exam, the Ph.D. candidate’s advisory committee must unanimously approve the Ph.D. candidate’s dissertation.

The Department of Electrical and Computer Engineering requires that the Ph.D. degree be completed within a period of six years from the time the candidate is fully admitted to the Ph.D. program. Further, courses taken more than six years prior to graduation cannot be applied toward the PhD degree without permission from the Graduate College. Students exceeding this time limit must formally write a letter requesting permission from both the Graduate Committee and the Graduate College to stay in the Ph.D. program and apply coursework towards the degree program. The formal letter must explain the circumstances of why the degree was not completed within the allotted timeframe and indicate the extended period of time needed to complete the degree.

The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing their degree requirements.
The student must submit and successfully defend his/her dissertation by the posted deadline. The defense must be advertised and is open to the public.

Student must submit his/her approved, properly formatted hard-copy dissertation to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

**Electrical and Computer Engineering Courses**

**ECG 600 - Computer Communication Networks**  
*Credits 3*  
Computer network architecture; the OSI Model: network protocols; local area networks; fiber optics communication; ISDN; elements of Queueing Theory, with emphasis on hardware design issues.

**ECG 603 - Embedded Systems Design**  
*Credits 3*  
Embedded Systems Design.

**ECG 604 - Modern Processor Architecture**  
*Credits 3*  

**ECG 605 - Data Compression Systems**  
*Credits 3*  

**ECG 607 – Biometrics**  
*Credits 3*  
Taxonomics of devices and applications, probability and statistical testing methods, one and two dimensional transform techniques, finger printing, voice recognition, facial recognition, and iris scanning, large scale identification applications, multibiometrics, social, legal, and ethical concerns.

**ECG 608 - Digital Design Verification and Testing**  
*Credits 3*  
A study of complete digital design testing during all design flow stages - from writing code to testing chips after manufacturing, creating and implementing effective test scenarios and assertion techniques, designing self-testing devices. Students will get hands-on experience with various EDA tools for design testing, verification, logic and fault simulation.

**ECG 620 - Analog Integrated Circuit Design**  
*Credits 3*  
An introduction to the design, layout, and simulation of analog integrated circuits including current mirrors, voltage and current references, amplifiers, and op-amps. **Prerequisites:** EE 320 or equivalent.

**ECG 621 - Digital Integrated Circuit Design**  
*Credits 3*  
An introduction to the design, layout, and simulation of digital integrated circuits. MOSFET operation and parasitics. Digital design fundamentals including the design of digital logic blocks. **Prerequisites:** CpE 100 and EE 320 or equivalent.
ECG 630 - Transmission Lines
Credits 3
Telegraphist’s equations; transient response—steady state response; reflection diagrams; Smith chart; matching techniques and designs; narrow and broadband impedance matching techniques; scattering matrix; introduction to stripline and microstrip devices.

ECG 631 - Engineering Optics
Credits 3
Fundamentals of antennas and antenna design; linear wire, loop, and antenna arrays; antenna measurements.

ECG 632 - Antenna Engineering
Credits 3
Fundamentals of antennas and antenna design; linear wire, loop, and antenna arrays; antenna measurements.

ECG 633 - Active and Passive Microwave Engineering
Credits 3
This 600-level course has been approved by the Graduate College for possible inclusion in graduate programs. A full description of this course may be found in the Undergraduate Catalog under the corresponding 400 number.

ECG 642 - Power Electronics
Credits 3
Topics include: diode circuits and rectifiers, power semiconductor diodes and transistors, thyristors and static switches, controlled rectifiers, AC voltage controllers, DC choppers, inverters, AC and DC drives, power supplies and protection of devices and circuits.

ECG 646 - Photovoltaic Devices and Systems
Credits 3
This course covers solar resource characteristics, solar cell physics and technologies, cell electrical characteristics, PV module design, DC-AC inverters, battery energy storage and charge controllers, design of stand-alone and grid-connected PV systems, and economic considerations. Prerequisites: Enrollment in the Solar and Renewable Energy Graduate Certificate Program, or graduate standing for engineering students.

ECG 650L - Solid State Characterization Laboratory
Credits 1
Capacitance and voltage. Hall mobility and carrier concentration, oxidation and etching silicon dioxide processing of silicon.

ECG 651 - Electronic and Magnetic Materials and Devices
Credits 3
Semiconductors, dielectrics, ferroelectrics, antiferromagnetics, ferromagnetics, ferrimagnetics, crystal structure, structure-property relations, device applications.

ECG 652 – Optoelectronics
Credits 3
Topics include: modulation of light, display devices, lasers, photodetectors, fiber optics, engineering applications, and systems.

ECG 653 - Introduction to Nanotechnology
Credits 3

ECG 662 - Advanced Digital Communications
Credits 3
Information theory and fundamental limits on performance, digital coding of waveforms, pulse shaping for baseband transmission, digital bandpass modulations, channel coding.

**ECG 672 - Digital Control Systems**  
**Credits 3**  
Introduction to discrete time of control. State space representation of linear systems; stability; the concepts of controllability and observability. Sample data control system design techniques, including pole placement, observer design.

**ECG 674 - Recent Topics in Control**  
**Credits 3**  
This 600-level course has been approved by the Graduate College for possible inclusion in graduate programs. A full description of this course may be found in the Undergraduate Catalog under the corresponding 400 number.

**ECG 680 - Discrete-Time Signal Processing**  
**Credits 3**  
Review of discrete linear system theory including the z-transformers, the Fourier transform, discrete and fast Fourier transform. Sampling, reconstruction multirate systems and quantization noise. IIR and FIR digital filter design including digital filter structures and finite word length effects.

**ECG 680L - Digital Signal Processing Laboratory**  
**Credits 1**  
Laboratory projects and exercises in digital signal processing including the design and implementation of FIR, IIR, and multirate systems.

**ECG 682 - Introduction to Biomedical Signals and Systems**  
**Credits 3**  
Introduction to biomedical signals, transduction devices, bioelectric potentials and sensors. Application of electrical signal and system principles to biosignals, such as cardiovascular electrical signals, neural electrical communication, and diagnostic ultrasound. Includes current biomedical engineering topics.

**ECG 695 - Special Topics**  
**Credits 1-4**  
Covers experimental and other topics which may be of current interest. Topics and credits to be announced. **Notes:** May be repeated once under a different topic. May have a laboratory.

**ECG 700 - Advanced Computer System Architecture**  
**Credits 3**  
High performance computer architecture including pipelining techniques, high speed memory systems, vector processors, parallel processing, and interconnection networks. **Prerequisites:** ECG 300 or consent of instructor.

**ECG 701 - Reliable Design of Digital Systems**  
**Credits 3**  
D-algorithm, Boolean difference, test generation for combinational and sequential circuits, self checking circuits, fault tolerant design, design for testability, and topics in reliability and maintainability. **Prerequisites:** ECG 300 or consent of instructor.

**ECG 702 - Interconnection Networks for Parallel Processing Applications**  
**Credits 3**  
Interconnection networks models, comparison of single-stage networks: PM2I, HYPERCUBE Illiac and salfle-exchange, partitioning single-state networks, multistage networks, survey and comparison of fault-tolerant multistage networks. **Prerequisites:** ECG 300 or consent of instructor.

**ECG 704 - Coding with Applications in Computers and Communication Media**  
**Credits 3**
Error correcting codes, design and analysis of encoder/decoder circuitry, applications to reliable communication and fault tolerant computing, compression encoding schemes. **Prerequisites:** ECG 300, MATH 453, or consent of instructor.

**ECG 706 - Analysis of Telecommunication and Data Networks**
**Credits 3**
Probability-based treatment of telecommunication and data networks. Delay, throughput, buffer management in layers of ISO Open Systems Interconnection Model. Performance analysis, flow and congestion control, routing function, polling and random access, CSMA/CD and Ethernet. **Prerequisites:** ECG 300 and MATH 462

**ECG 707 - Logic Synthesis Engineering**
**Credits 3**
Theory and application of Boolean Minimization, functional decomposition and logic synthesis for FPGAs, serial and parallel decomposition strategies, and design implementation using FPGAs. Design entry, introduction to VHDL, BDD, FSM, and BLIF. Placement and routing in Xilinx and Aleira. **Prerequisites:** Graduate standing in computer engineering or consent of instructor.

**ECG 709 - Synthesis and Optimization of Digital Systems**
**Credits 3**
Study of the high-level synthesis and optimization algorithms for designing SOCs and MPSOCs. Topics including algorithms for high-level synthesis, scheduling, resource binding, real-time systems, application specific instruction processors, embedded systems and hardware/software codesigns. Simulate and synthesize algorithms using HDL languages (Verilog and SystemC). Use of simulators and emulators. **Prerequisites:** CPE 300 and C/C++ knowledge or Instructor permission

**ECG 720 - Advanced Analog IC Design**
**Credits 3**
Advanced analog design considerations including: noise, common-mode feedback, high-speed design, and design for analog signal processing. **Prerequisites:** EE 420 or ECG 620.

**ECG 721 - Memory Circuit Design**
**Credits 3**
A practical introduction to the transistor-level design of memory circuits. Memory technologies including DRAM, Flash, MRAM, Glass-based, and SRAM will be discussed. **Prerequisites:** EE 421 or ECG 621.

**ECG 722 - Mixed-Signal Circuit Design**
**Credits 3**
Design of data converters using sigma-delta techniques. Operation and design of custom digital filters for decimating and interpolating in analog-to-digital interfaces. **Prerequisites:** EE 320 and EE 360 or equivalent.

**ECG 730 - Advanced Engineering Electromagnetics I**
**Credits 3**
Conformal transformation with application to static field problems in engineering; wave harmonics with engineering applications; theorems of waves and media; Special Theory of Relativity with engineering applications; wave propagation in various media; engineering application of scattering. **Prerequisites:** ECG 330 or consent of instructor.

**ECG 731 - Theoretical Techniques in Electromagnetics**
**Credits 3**
Review and introduce mathematical techniques basic to the study of engineering electromagnetics, including coupled mode theory; complex analysis; and Green’s function. **Prerequisites:** ECG 330 or consent of instructor.

**ECG 732 - Advanced Engineering Electromagnetics II**
**Credits 3**
Scattering; particle and beam radiation; selected topics in advanced antenna and microwave engineering. **Prerequisites:** ECG 330 or consent of instructor.
ECG 733 - Plasma I
Credits 3
Single particle motion; adiabatic invariants; plasmas as fluids; waves in plasmas; diffusion; resistivity; introduction to kinetic theory; Landau damping. Prerequisites: ECG 330

ECG 740 - Computer Analysis Methods for Power Systems
Credits 3
Power system matrices, programming considerations, conventional power flow studies, approximate and fast power flow studies, optimal dispatch, fault studies, power system stability, stochastic methods in power systems analysis. Prerequisites: ECG 440, ECG 440L or consent of instructor.

ECG 741 - Electric Power Distribution System Engineering
Credits 3
Electric load characteristics, distribution transformers, design of subtransmission lines and distribution substations, design of primary and secondary systems, voltage drop and power loss calculation, capacitor applications, voltage regulation, distribution system protection and reliability. Prerequisites: ECG 440, ECG 440L or consent of instructor.

ECG 742 - Power System Stability and Control
Credits 3
Power equipment dynamic characteristics and modeling, control of active and reactive power, small-signal stability, transient stability, voltage stability, sub-synchronous oscillations, mid- and long-term stability, methods of improving stability. Prerequisites: ECG 440, ECG 440L or consent of instructor.

ECG 750 - Optical Electronics I
Credits 3
Propagation of rays and beams, optical beams in fibers, resonators, laser oscillation, electro-optic, modulation, laser systems. Prerequisites: MATH 432, ECG 330, ECG 452 or consent of instructor.

ECG 751 - Optical Electronics II
Credits 3
Detection of optical radiation, optical dielectric waveguides, semiconductor lasers, phase conjugate optics, laser applications including holography. Prerequisites: ECG 750

ECG 752 - Physical Electronics
Credits 3

ECG 753 - Advanced Topics in Semiconductor Devices I
Credits 3
Topics of current interest in solid state electronic devices: physics of semiconductors, thermal and optical and electronic properties of semiconductors, bipolar junction devices, field effect devices, surface related effects, optoelectronic devices, semiconductor lasers. Applications and the design of circuits using these devices. Intended for electrical and electronic engineers, physicists and qualified senior students in engineering and physics. Prerequisites: PHYS 411 and 483 or ECG 421, ECG 420 and consent of instructor.

ECG 754 - Hybrid Microelectronics
Credits 3
Vacuum theory, thin and thick film fabrication, electron transport phenomena, electronic properties active and passive films, distributed networks, designing hybrid microcircuits. Prerequisites: Graduate standing or consent of instructor.

ECG 755 - Monolithic Integrated Circuit Fabrication
Credits 3
Fabrication of integrated silicon and gas circuits, thermal oxidation, solid state diffusion, epitaxial growth, ion implantation, photo and electron lithography, design considerations, surface effect. Prerequisites: Graduate standing or consent of instructor.

ECG 756 - Advanced Topics in Semiconductor Devices II
Credits 3
Topics of current interest in solid state electronic devices: ultrafast electronics, high electron mobility transistors, superlattices, heteroface devices, transfer electron devices and III-V and II-VI compounds, novel device structures. Novel approaches to device modeling such as Monte Carlo simulations, self-consistent solution of Schroedinger and Poisson and other approaches. Prerequisites: ECG 753

ECG 757 - Electron Transport Phenomena in Solid State Devices
Credits 3
Phenomenological transport equations, Boltzmann transport equation, relaxation time approximation, low field and high electron transport in Si and GaAs, moments of BTE, Monte Carlo simulation, spatial and temporal transients, device analysis, Quantum transport. Prerequisites: ECG 450 or ECG 753.

ECG 760 - Random Processes in Engineering Problems
Credits 3
Basic probability theory, random variables, probability and densities, expectation, static estimation, random processes, power spectral density, mean square calculus, Wiener integrals. Prerequisites: ECG 460, MATH 461 or consent of instructor.

ECG 761 - Spectral Analysis and Time Series
Credits 3
Stationary random processes. Spectral representation. Estimation of correlation functions and spectra. Higher order spectra and nonlinear system models. Prerequisites: ECG 460, ECG 760 or consent of instructor.

ECG 762 - Detection and Estimation of Signals in Noise
Credits 3
Hypothesis testing, matched filters, estimation theory, Kalman and Wiener filters, applications to communication systems. Prerequisites: ECG 460, ECG 760 or consent of instructor.

ECG 770 - Linear Systems Theory
Credits 3
Mathematical systems theory, state space concepts, canonical forms, time and frequency domains, controllability and observability, state feedback, compensator design, and algebraic systems theory. Prerequisites: ECG 470, MATH 431 or consent of instructor.

ECG 771 - Optimal and Modern Controls
Credits 3
Review of analysis of linear control systems, optimal control systems, time and frequency domains, regulator problems, deterministic and random processes. Notes: Topics selected according to the interests of the class. Prerequisites: ECG 770

ECG 772 - Nonlinear Systems I
Credits 3
Introduction, differential equations, approximate analysis methods, Lyapunov stability, input-output stability. Prerequisites: ECG 770 or consent of instructor.

ECG 773 - Multivariable Control
Credits 3
Mathematical preliminaries, frequency domain representation, differential operator representation, linear state feedback, frequency domain compensation, fractional approaches, recent topics in control. Prerequisites: ECG 770 or consent of instructor.
ECG 774 - Stochastic Control  
Credits 3  
Introduction, stochastic processor, state estimation, Kalman Filter, nonlinear estimation, stochastic control.  
**Prerequisites**: ECG 770 or consent of instructor.

ECG 775 - Nonlinear Systems II  
Credits 3  
Geometric approach to nonlinear systems, inversion of input-output map, decomposition, noninteraction, disturbance decoupling, exact linearization, nonlinear control synthesis, Volterra series, realization theory.  
**Prerequisites**: ECG 772 or consent of instructor.

ECG 776 - Adaptive Control  
Credits 3  
Introduction, model reference control, hyperstability, Popov criterion, parameter identification, adaptive control of discrete systems, adaptive predictor, adaptive state estimation.  
**Prerequisites**: ECG 770 (formerly EEG 760) or consent of instructor.

ECG 777 - Robotic Systems Control  
Credits 3  
Dynamics of rigid and elastic robotic systems, trajectory planning, inverse torque computation, adaptive control, variable structure control, torque and force feedback control.  
**Prerequisites**: Consent of instructor.

ECG 780 - Digital Signal Processing  
Credits 3  
Introduction to the theory and applications of digital signal processing. Discrete-time signals, linear systems and difference equations. Sampling and multirate systems. One sided and two sided z-transforms. Finite impulse response (FIR) and infinite impulse response (IIR) systems. The discrete and fast Fourier transforms (FFT).  
**Prerequisites**: ECG 460, MATH 431 or consent of instructor.

ECG 781 - Digital Filters  
Credits 3  
Theory and applications of digital filters. Structures for discrete time systems. Finite precision numerical effects in digital systems. Finite impulse response (FIR) and infinite impulse response (IIR) digital filters designs including windowing techniques, optimization techniques, analog to discrete time transformation techniques and wave digital filters.  
**Prerequisites**: ECG 780.

ECG 782 - Multidimensional Digital Signal Processing  
Credits 3  
Theory and applications of multidimensional (M-D) digital signal processing. M-D signals and systems. M-D z-transform. M-D DFT and FFT. Design and implementation of M-D FIR and IIR filters. Applications to image processing such as image enhancement and restoration. Advanced topics chosen according to class interests.  
**Prerequisites**: ECG 780.

ECG 783 - Adaptive Signal Processing with Neural Networks  
Credits 3  
**Prerequisites**: ECG 780 or equivalent.

ECG 791 - Independent Study in Electrical Engineering  
Credits 1 – 3  
Supervised independent work in a topic of electrical engineering.  
**Notes**: May be repeated to a maximum of six credits with consent of electrical engineering faculty.  
**Prerequisites**: Graduate standing in electrical engineering or related field and consent of instructor.
ECG 795 - Advanced Special Topics in Electrical Engineering  
Credits 1 – 3  
Advanced special topics in modern electrical engineering as defined in the announcement of the course. 
Notes: May be repeated to a maximum of six credits. Prerequisites: Graduate standing in electrical engineering or related field and consent of instructor.

ECG 797 - Electrical Engineering Thesis  
Credits 3 – 6  
Notes: May be repeated, but only six credits will be applied to a student’s program. Grading: S/F grading only. Prerequisites: Graduate standing in electrical engineering or related field and consent of instructor.

ECG 799 – Dissertation  
Credits 1 – 6  
Research analysis and writing toward completion of dissertation and subsequent defense. Notes: May be repeated to a maximum of 18 credits allowed toward the degree. Grading: S/F grading only. Prerequisites: Graduate standing in electrical engineering or related field and consent of instructor.
Mechanical Engineering

Among the subjects taught and researched by the faculty of the mechanical engineering program are the following: active material, aerospace, vibrations and acoustics, heat transfer, fluid flow (and computational fluid dynamics), environmental transport processes, multiphase flow, energy conservation and conversion technologies, alternative energy including solar power, automatic control, robotics, biomedical engineering, nuclear engineering, structural properties of engineering materials, and composites.

Graduate students have access to all departmental laboratories and equipment as well as the facilities of the National Supercomputing Center for Energy and the Environment. The department supports numerous networked workstations.

The laboratories of the department include an extensive acoustics and vibrations facility, a thermal-fluids capability, a full array of mechanical testing machines, measurement and control laboratory, and a low-moderate speed wind tunnel. A unique laboratory also exists for full-scale testing of ducts and diffusers, including indoor air quality and HVAC equipment.

In addition to a recently established material performance laboratory, several faculty members are developing and testing different designs of solar power generators.

Woosoon Yim, Ph.D., Chair
Yitung Chen, Ph.D., Graduate Coordinator

Chair

Yim, Woosoon - Full Graduate Faculty
Professor; B.S., Hanyang University, S. Korea; M.S., Ph.D. University of Wisconsin-Madison. Rebel since 1987.

Graduate Coordinator

Chen, Yi Tung - Full Graduate Faculty
Professor; B.S, Feng Chia University; M.S., Ph.D., University of Utah. Rebel since 1993.

Graduate Faculty

Barzilov, Alexander P. - Full Graduate Faculty
Associate Professor; M.S. Institute of Nuclear Power Engineering (INPE), Obninsk, Russia; Ph.D. Institute of Physics and Power Engineering (IPPE), Obninsk, Russia. Rebel since 2012.

Boehm, Robert F. - Full Graduate Faculty
Professor; B.S., M.S., Washington State University; Ph.D., University of California, Berkeley; P.E., California. Rebel since 1990.

Culbreth, William G. - Full Graduate Faculty
Associate Professor; B.S., California State Polytechnic University, Pomona; M.S., Ph.D., University of California, Santa Barbara. Rebel since 1985.

Kim, Kwang J. - Full Graduate Faculty
Professor; B.S., Yonsei University, S. Korea; M.S., Ph.D., Arizona State University. Rebel since 2012.

**Mauer, Georg F. - Full Graduate Faculty**
Professor; Diploma-Ingenieur; Ph.D., Technical University of Berlin. Rebel since 1986.

**Moujaes, Samir F. - Full Graduate Faculty**
Professor; B.S., M.S., American University of Beirut; Ph.D., University of Pittsburgh; P.E., Nevada. Rebel since 1984.

**O'Toole, Brendan J. - Full Graduate Faculty**
Professor; B.S., M.S., Ph.D., University of Delaware. Rebel since 1992.

**Pepper, Darrell W. - Full Graduate Faculty**
Professor; B.S., M.S., Ph.D., University of Missouri-Rolla. Rebel since 1992.

**Reynolds, Douglas D. - Full Graduate Faculty**
Professor; B.S., Michigan State University; M.S., Ph.D., Purdue University. Rebel since 1983.

**Rice, Stephen - Full Graduate Faculty**
Professor; B.S., M.Eng., Ph.D., University of California, Berkeley. Rebel since 1966.

**Trabia, Mohamed - Full Graduate Faculty**
Professor; B.S., M.S., Alexandria University; Ph.D., Arizona State University. Rebel since 1987.

**Wang, Zhiyoung - Full Graduate Faculty**
Associate Professor; B.S., M.S., Ph.D., Harbin University of Science and Technology. Rebel since 1998.

**Zhao, Hui - Full Graduate Faculty**
Assistant Professor; B.S., M.S., Peking University, China; Ph.D., University of Pennsylvania. Rebel since 2009.

### Mechanical Engineering Plans

#### Graduate Certificate in Nuclear Criticality Safety

The graduate, distance education Nuclear Criticality Safety Engineering (NCSE) Certificate program will provide the graduate MSMNE student a diverse education and the practicing NCS engineer (and their employer) with components that will help train and maintain a well-qualified workforce. The UNLV NCSE Certificate will provide evidence that the graduate has the appropriate education to become a certified NCS Engineer in NRC-licensed facilities, US DOE's national laboratories, and the Navy Reactors program. The NCSE Certificate program consists of four nuclear engineering courses (twelve credits total) that include three required courses and a related/approved elective course. In addition, many of the proposed topic areas, e.g., Introduction to Nuclear Criticality Safety, are also appropriate subjects for general nuclear engineering graduate students (i.e., not NCS engineers), while other certificate program courses, e.g., Monte Carlo Methods are appropriate for both UNLV, Åös NE students as well as health and medical physics students.

#### Plan Admission Requirement

Admission to the NCSE Certificate program requires both a BS degree in an engineering discipline and ME 455/655 Fundamentals of Nuclear Engineering (or equivalent).

If an applicant can demonstrate equivalent knowledge from relevant work experience (e.g. Navy nuclear reactor program or extensive training and experience at an NRC-licensed or DOE process facility), the Director of the NCSE Certificate Program can waive both requirements with the concurrence of the Chair of the Department of Mechanical Engineering based upon review by nuclear engineering faculty.
All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

**Plan Requirements**

Total Credits Required: 12

**Course Requirements**

- Required Courses, 9 credits:
  - ME 754 - Introduction to Nuclear Criticality Safety
  - ME 755 - Nuclear Criticality Safety Engineering
  - ME 756 - Monte Carlo Methods in Nuclear Engineering
- Elective, 3 credits:
  - Complete an advisor-approved graduate-level nuclear engineering or health physics course.

**Certificate Requirements**

- Completion of a minimum of 12 credit hours with a minimum GPA of 3.00.

**Plan Certificate Completion Requirements**

- The student must submit all required forms to the Graduate College and then apply for graduation in MyUNLV by the appropriate deadline.

---

**Master of Science in Aerospace Engineering - Aerospace Engineering**

The objectives of the M.S.A.E. degree are to provide a quality graduate educational program that will complement the existing undergraduate and graduate curricula in mechanical engineering. The aerospace graduate program will improve and enhance the capabilities of those students seeking careers in the aerospace field and supporting engineering work for the aerospace and aviation technology community. The majority of students seeking the M.S.A.E. degree will have undergraduate degrees in the fields of mechanical or aerospace engineering, or closely related fields of engineering, applied physics, or applied mathematics; some will already have graduate degrees in the more conventional areas of engineering or the sciences. Those individuals with engineering (as well as physical science) interests will use the M.S.A.E. to develop careers as well as improve their skills in the aerospace and aviation industry. Students enrolling in the program on a full-time basis will likely assist engineering faculty in obtaining sponsored project funding and performing innovative aerospace and aviation engineering research.

**Learning Outcomes**

[www.unlv.edu/degree/msae-aerospace-engineering](http://www.unlv.edu/degree/msae-aerospace-engineering)

**Plan Admission Requirement**

In addition to the general requirements for admission to the Graduate College, an applicant for the M.S. program must complete the following requirements:

1. Applicants must complete the on-line process in the "Apply Yourself (AY)" system.
2. In addition to the required information in the general AY application system, the Mechanical Engineering Department has two additional requirements which can also be submitted in the AY system as optional
items. Electronic submission is the preferred method. If these items are not completed in the AY system before you finish and make payment, you cannot go back and do them electronically afterwards. In this case, you must mail hardcopies to the Mechanical Engineering Department. The two items are:

3. A written statement of purpose indicating interests and objectives in working toward a M.S. degree.
4. Two letters of recommendation. There is no specified format. Your references should point out the qualifications that make you a good candidate for admission.

5. The applicant must have a bachelor's degree in engineering or a closely related discipline. Students with non-engineering backgrounds will be required to complete a set of course work requirements that will assure successful completion of the M.S. specialization and qualify the student to sit for the Fundamentals of Engineering (FE) exam. The Graduate Program Committee (GPC) will decide upon special cases.

6. The applicant must submit his/her official copy of the Graduate Record Examination (GRE) test scores. To be admitted to the graduate program in Mechanical Engineering, the applicant must be at or above the 75 percentile range (of the group taking the GRE when the applicant takes the exam) in the quantitative reasoning section of the exam. If the applicant is less than 75 percent, at the discretion of the Department of Mechanical Engineering, the applicant may be provisionally admitted to the graduate program with the requirement that he/she retake the GRE during the first semester after admission. If the applicant fails to retake the GRE during the first semester after admission or if the applicant fails to be at or above the 75 percent range in the quantitative reasoning section of the exam after retaking the exam, at its discretion, the Department of Mechanical Engineering may remove the applicant from the graduate program. The GRE university code for UNLV is 4861. The Mechanical Engineering Department code is 1502.

7. The GPC will examine the applicant's academic record and will make the final determination of the applicant's admissibility to the M.S. program. In general, a minimum post baccalaureate GPA of 3.00 on a 4.00 scale or equivalent is required for admission in addition to a GPA of 3.00 on a 4.00 scale or equivalent in all engineering courses.

8. All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Our department admissions committee looks at all of these requirements when making admissions decisions.

The Integrated BS-MS degree program is designed to provide high-achieving MEG undergraduate students with the opportunity to be exposed to graduate courses and to encourage them to continue with graduate degree by reducing the time needed for degree completion. Up to nine credit hours of approved graduate-level course work can be taken as technical electives for the grade of B or better during the senior year and those credit hours will be waived for the graduate degree. The following conditions are needed to enroll in the Integrated BS-MS program:

- A minimum of two semesters of full-time enrollment in B.S. of Mechanical Engineering program is required.
- Applications are normally submitted with two semesters remaining in the senior year.
- A minimum of 90 credit hours of course work applicable to the B.S. of Mechanical Engineering degree with a cumulative GPA of 3.50 or higher must be completed before beginning the joint degree program.
- Student has to choose the thesis option.

Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Non-Thesis Track

Total Credits Required: 30

Course Requirements
• Required Courses, 9 credits:
  o Complete three of the following courses:
    ▪ ME 609 - Turbomachinery
    ▪ ME 700 - Advanced Fluid Mechanics I
    ▪ ME 701 - Advanced Fluid Mechanics II
    ▪ ME 702 - Computational Fluid Dynamics
    ▪ ME 705 - Conduction Heat Transfer
    ▪ ME 706 - Convective Heat Transfer
    ▪ ME 740 - Advanced Dynamics
    ▪ ME 741 - Energy and Variational Methods in Applied Mechanics I

• Core Courses, 6 credits:
  o Complete two of the following courses:
    ▪ ME 704 - Finite Element Applications in Mechanical Engineering
    ▪ ME 711 - Advanced Thermodynamics
    ▪ ME 717 - Transport Phenomena
    ▪ ME 720 - Acoustics I
    ▪ ME 721 - Acoustics II
    ▪ ME 725 - Vibrations I
    ▪ ME 726 - Vibrations II
    ▪ ME 729 - Advanced Robotics
    ▪ ME 774 - Introduction to Theory of Elasticity and Plasticity I
    ▪ ME 777 - Application of High-Performance Computing Methods in Science and Engineering

• Elective Courses, 12 credits:
  o Complete 12 credits of elective coursework from within the College of Engineering. Courses from outside the College of Engineering may be taken with advisor approval.

• Design Project, 3 credits:
  o ME 796 - Design Project in Mechanical Engineering

Degree Requirements

• Requires 33 credits of approved graduate courses. At least 18 credits must be earned from 700-level courses, and 15 credits must be in engineering.
• Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
• Only those courses in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.
• Each student’s program should show suitable breadth and coherence. As specified in the Graduate Catalog, the program of study will be developed by the student and advisor and filed with the Graduate College. Prior to filing, the program must receive approval by the student, student committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

• The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
• Successfully complete a design project.
Subplan 2 Requirements: Thesis Track

Total Credits Required: 30

Course Requirements

- Required Courses, Å1 Credits: 9
  - Complete three of the following courses:
    - ME 609 - Turbomachinery
    - ME 700 - Advanced Fluid Mechanics I
    - ME 701 - Advanced Fluid Mechanics II
    - ME 702 - Computational Fluid Dynamics
    - ME 705 - Conduction Heat Transfer
    - ME 706 - Convective Heat Transfer
    - ME 740 - Advanced Dynamics
    - ME 741 - Energy and Variational Methods in Applied Mechanics I

- Core Courses, Å1 Credits: 6
  - Complete two of the following courses:
    - ME 704 - Finite Element Applications in Mechanical Engineering
    - ME 711 - Advanced Thermodynamics
    - ME 717 - Transport Phenomena
    - ME 720 - Acoustics I
    - ME 721 - Acoustics II
    - ME 725 - Vibrations I
    - ME 726 - Vibrations II
    - ME 729 - Advanced Robotics
    - ME 774 - Introduction to Theory of Elasticity and Plasticity I
    - ME 777 - Application of High-Performance Computing Methods in Science and Engineering

- Elective Courses, Å1 Credits: 9
  - Complete 9 credits of elective coursework from within the College of Engineering. Courses from outside the College of Engineering may be taken with advisor approval.

- Thesis, Å1 Credits: 6
  - ME 797 - Thesis in Mechanical Engineering

Degree Requirements

- Requires 24 credits of approved graduate courses plus six credits of work associated with the master's level thesis, for a total of 30 credits. At least 15 credits must be earned from 700-level courses, and at least 15 credits must be in engineering. The final examination will include a defense of thesis.

- Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.

- Only those courses in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.

- In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department,Åôs discretion. Please see Graduate College policy for committee appointment guidelines.
Each student’s program should show suitable breadth and coherence. As specified in the Graduate Catalog, the program of study will be developed by the student and advisor and filed with the Graduate College. Prior to filing, the program must receive approval by the student, Åô’s committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Subplan 3 Requirements: Integrated BS-MS Track

Total Credits Required: 21-27

Course Requirements

- Required Courses, Åô Credits: 9
  - Complete three of the following courses:
    - ME 609 - Turbomachinery
    - ME 700 - Advanced Fluid Mechanics I
    - ME 701 - Advanced Fluid Mechanics II
    - ME 702 - Computational Fluid Dynamics
    - ME 705 - Conduction Heat Transfer
    - ME 706 - Convective Heat Transfer
    - ME 740 - Advanced Dynamics
    - ME 741 - Energy and Variational Methods in Applied Mechanics I
- Core Courses, Åô Credits: 6
  - Complete two of the following courses:
    - ME 704 - Finite Element Applications in Mechanical Engineering
    - ME 711 - Advanced Thermodynamics
    - ME 717 - Transport Phenomena
    - ME 720 - Acoustics I
    - ME 721 - Acoustics II
    - ME 725 - Vibrations I
    - ME 726 - Vibrations II
    - ME 729 - Advanced Robotics
    - ME 774 - Introduction to Theory of Elasticity and Plasticity I
    - ME 777 - Application of High-Performance Computing Methods in Science and Engineering
- Electives, Åô Credits: 0-6
  - Complete 0-6 credits of elective coursework from within the College of Engineering. Courses from outside the College of Engineering may be taken with advisor approval.
- Thesis, Åô Credits: 6
  - ME 797 - Thesis in Mechanical Engineering

Degree Requirements
- Total credits required depends on the total number of approved graduate-level course work taken as technical electives (with a grade of B or better) during the senior year.
- Requires 15-21 credits of approved graduate courses plus six credits of work associated with the master, Â©s level thesis, for a total of 21-27 credits. At least 15 credits must be earned from 700-level courses, and at least 15 credits must be in engineering. The final examination will include a defense of thesis.
- Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
- Only those courses in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.
- In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department, Â©s discretion. Please see Graduate College policy for committee appointment guidelines.
- Each student, Â©s program should show suitable breadth and coherence. As specified in the Graduate Catalog, the program of study will be developed by the student and advisor and filed with the Graduate College. Prior to filing, the program must receive approval by the student, Â©s committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Plan Graduation Requirements

Refer to your subplan for Graduation Requirements.

- Subplan 1: Non-Thesis Track
- Subplan 2: Thesis Track
- Subplan 3: Integrated BS-MS Track

Master of Science - Biomedical Engineering

The objective of the M.S.B.E. degree program is to provide a graduate-level educational experience that will prepare individuals to undertake design and research in the area of biomedical engineering. The program is multidisciplinary and integrates knowledge from the traditional engineering sciences, the life sciences, and medicine.

Specific goals of the program include development of:
• A thorough grounding in the life sciences;
• Mastery of engineering tools and approaches;
• Familiarity with the problems of making and interpreting quantitative measurements of living systems;
• The ability to use modeling techniques; and
• The ability to formulate and solve problems with medical relevance, including the design of devices, systems, and processes to improve human health.

Learning Outcomes

www.unlv.edu/degree/msbe-biomedical-engineering

Plan Admission Requirement

In addition to the general requirements for admission to the Graduate College, an applicant for the M.S. program must complete the following requirements:

1. Applicants must complete the on-line process in the Apply Yourself (AY) system.
2. In addition to the required information in the general AY application system, the Mechanical Engineering Department has two additional requirements which can also be submitted in the AY system as optional items. Electronic submission is the preferred method. If these items are not completed in the AY system before you finish and make payment, you cannot go back and do them electronically afterwards. In this case, you must mail hardcopies to the Mechanical Engineering Department. The two items are:
3. A written statement of purpose indicating interests and objectives in working toward a M.S. degree.
4. Two letters of recommendation. There is no specified format. Your references should point out the qualifications that make you a good candidate for admission.
5. The applicant must have a bachelor's degree in engineering or a closely related discipline. Students with non-engineering backgrounds will be required to complete a set of course work requirements that will assure successful completion of the M.S. specialization and qualify the student to sit for the Fundamentals of Engineering (FE) exam. The Graduate Program Committee (GPC) will decide upon special cases.
6. The applicant must submit his/her official copy of the Graduate Record Examination (GRE) test scores. To be admitted to the graduate program in Mechanical Engineering, the applicant must be at or above the 75 percentile range (of the group taking the GRE when the applicant takes the exam) in the quantitative reasoning section of the exam. If the applicant is less than 75 percent, at the discretion of the Department of Mechanical Engineering, the applicant may be provisionally admitted to the graduate program with the requirement that he/she retake the GRE during the first semester after admission. If the applicant fails to retake the GRE during the first semester after admission or if the applicant fails to be at or above the 75 percent range in the quantitative reasoning section of the exam after retaking the exam, at its discretion, the Department of Mechanical Engineering may remove the applicant from the graduate program. The GRE university code for UNLV is 4861. The Mechanical Engineering Department code is 1502.
7. The GPC will examine the applicant’s academic record and will make the final determination of the applicant’s admissibility to the M.S. program. In general, a minimum post baccalaureate GPA of 3.00 on a 4.00 scale or equivalent is required for admission in addition to a GPA of 3.00 on a 4.00 scale or equivalent in all engineering courses.
8. All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Our department admissions committee looks at all of these requirements when making admissions decisions.

Students who have not taken at least three of the courses listed below (or their equivalent), will be required to do so in addition to course requirements listed below.
**Course Requirements**

- BIO 209, Introduction to Cell Biology
- BIO 360, Mammalian Physiology
- CHE 225, Organic Chemistry I
- BIOL 209, Introduction to Cell Biology
- BIOL 223, Human Anatomy and Physiology I
- BIOL 480, Introduction to Biological Modeling
- CHEM 220, Introductory Organic Chemistry
- CHEM 474, Biochemistry I
- CHEM 478, Endocrinology
- MATH 283, Calculus III
- MATH 427, Differential Equations I
- MATH 431, Mathematics for Engineers and Scientists I
- STAT 463, Applied Statistics for Engineers
- ME 301, Structure and Properties of Solids
- ME 302, Material Mechanics
- ME 311, Engineering Thermodynamics
- ME 314, Introduction to Heat Transfer
- ME 380, Fluid Dynamics for Mechanical Engineers
- ME 402, Computational Methods for Engineers
- ME 421, Automatic Controls
- ME 425, Robotics

The Integrated BS-MS degree program is designed to provide high-achieving MEG undergraduate students with the opportunity to be exposed to graduate courses and to encourage them to continue with graduate degree by reducing the time needed for degree completion. Up to nine credit hours of approved graduate-level course work can be taken as technical electives for the grade of B or better during the senior year and those credit hours will be waived for the graduate degree. The following conditions are needed to enroll in the Integrated BS-MS program:

- A minimum of two semesters of full-time enrollment in B.S. of Mechanical Engineering program is required.
- Applications are normally submitted with two semesters remaining in the senior year.
- A minimum of 90 credit hours of course work applicable to the B.S. of Mechanical Engineering degree with a cumulative GPA of 3.50 or higher must be completed before beginning the joint degree program.
- Student has to choose the thesis option.

**Plan Requirements**

See Subplan Requirements below.

**Subplan 1 Requirements: Non-Thesis Track**

Total Credits Required: 30

**Course Requirements**

- Required Courses, Credits: 27
  - Complete 27 credits of advisor-approved common core introductory biomedical engineering and health science courses.
• Design Project, 3 Credits: 3
  o ME 796 - Design Project in Mechanical Engineering

Degree Requirements

• Requires 33 credits of approved graduate courses. At least 18 credits must be earned from 700-level courses, and 15 credits must be in engineering.
• Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
• Only those courses in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.
• Courses numbered below 600 do not count toward the hours required for the M.S. degree.
• Each student’s program should show suitable breadth and coherence. As specified in the Graduate Catalog, the program of study will be developed by the student and advisor and filed with the Graduate College. Prior to filing, the program must receive approval by the student, student committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

• The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
• Successfully complete a design project.

Subplan 2 Requirements: Thesis Track

Total Credits Required: 30

Course Requirements

• Required Courses, 24 Credits: 24
  o Complete 24 credits of advisor-approved common core introductory biomedical engineering and health science courses.
• Thesis, 6 Credits: 6
  o ME 797 - Thesis in Mechanical Engineering

Degree Requirements

• Requires 24 credits of approved graduate courses plus six credits of work associated with the master, student level thesis, for a total of 30 credits. At least 15 credits must be earned from 700-level courses, and at least 15 credits must be in engineering. The final examination will include a defense of thesis.
• Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If
progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.

- Only those courses in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.
- Courses numbered below 600 do not count toward the hours required for the M.S. degree.
- In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department's discretion. Please see Graduate College policy for committee appointment guidelines.
- Each student's program should show suitable breadth and coherence. As specified in the Graduate Catalog, the program of study will be developed by the student and advisor and filed with the Graduate College. Prior to filing, the program must receive approval by the student, the committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

**Graduation Requirements**

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

**Subplan 3 Requirements: Integrated BS-MS Track**

Total Credits Required: 21-27

**Course Requirements**

- **Required Courses**, Credits: 15-21
  - Complete 15-21 credits of advisor-approved common core introductory biomedical engineering and health science courses.
- **Thesis**, Credits: 6
  - ME 797 - Thesis in Mechanical Engineering

**Degree Requirements**

- Total credits required depends on the total number of approved graduate-level course work taken as technical electives (with a grade of B or better) during the senior year.
- Requires 15-21 credits of approved graduate courses plus six credits of work associated with the master's level thesis, for a total of 21-27 credits. At least 15 credits must be earned from 700-level courses, and at least 15 credits must be in engineering. The final examination will include a defense of thesis.
- Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the
Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.

- Only those courses in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.
- Courses numbered below 600 do not count toward the hours required for the M.S. degree.
- In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. Master of Science - Materials and Nuclear Engineering

M.S. is intended to provide the student with a solid background in either applied nuclear science and engineering, with an emphasis in used fuel management, criticality, or radiation detection, or material science and engineering, with an emphasis in materials performance. The program consists of two master’s degree tracks: Materials Engineering and Nuclear Engineering. The materials engineering track consists of a core curriculum in material science, metallurgy, and materials performance, which is to be augmented by advanced level classes in corrosion engineering, physical metallurgy, mechanical metallurgy, mechanics of materials, and nuclear materials. The nuclear engineering track consists of a core curriculum in applied nuclear science and engineering, coupled with advanced classes in the student’s sub discipline.

Learning Outcomes

www.unlv.edu/degree/msmne-materials-and-nuclear-engineering
Plan Admission Requirement

In addition to the general requirements for admission to the Graduate College, an applicant for the M.S. program must complete the following requirements:

1. Applicants must complete the on-line process in the Apply Yourself (AY) system.
2. In addition to the required information in the general AY application system, the Mechanical Engineering Department has two additional requirements which can also be submitted in the AY system as optional items. Electronic submission is the preferred method. If these items are not completed in the AY system before you finish and make payment, you cannot go back and do them electronically afterwards. In this case, you must mail hardcopies to the Mechanical Engineering Department. The two items are:
   3. A written statement of purpose indicating interests and objectives in working toward a M.S. degree.
   4. Two letters of recommendation. There is no specified format. Your references should point out the qualifications that make you a good candidate for admission.
5. The applicant must have a bachelor's degree in engineering or a closely related discipline. Students with non-engineering backgrounds will be required to complete a set of course work requirements that will assure successful completion of the M.S. specialization and qualify the student to sit for the Fundamentals of Engineering (FE) exam. The Graduate Program Committee (GPC) will decide upon special cases.
6. The applicant must submit his/her official copy of the Graduate Record Examination (GRE) test scores. To be admitted to the graduate program in Mechanical Engineering, the applicant must be at or above the 75 percentile range (of the group taking the GRE when the applicant takes the exam) in the quantitative reasoning section of the exam. If the applicant is less than 75 percent, at the discretion of the Department of Mechanical Engineering, the applicant may be provisionally admitted to the graduate program with the requirement that he/she retake the GRE during the first semester after admission. If the applicant fails to retake the GRE during the first semester after admission or if the applicant fails to be at or above the 75 percent range in the quantitative reasoning section of the exam after retaking the exam, at its discretion, the Department of Mechanical Engineering may remove the applicant from the graduate program. The GRE university code for UNLV is 4861. The Mechanical Engineering Department code is 1502.
7. The GPC will examine the applicant's academic record and will make the final determination of the applicant's admissibility to the M.S. program. In general, a minimum post baccalaureate GPA of 3.00 on a 4.00 scale or equivalent is required for admission in addition to a GPA of 3.00 on a 4.00 scale or equivalent in all engineering courses.
8. All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.
9. Our department admissions committee looks at all of these requirements when making admissions decisions.
10. The Integrated BS-MS degree program is designed to provide high-achieving MEG undergraduate students with the opportunity to be exposed to graduate courses and to encourage them to continue with graduate degree by reducing the time needed for degree completion. Up to nine credit hours of approved graduate-level course work can be taken as technical electives for the grade of B or better during the senior year and those credit hours will be waived for the graduate degree. The following conditions are needed to enroll in the Integrated BS-MS program:
   11. A minimum of two semesters of full-time enrollment in B.S. of Mechanical Engineering program is required.
   12. Applications are normally submitted with two semesters remaining in the senior year.
   13. A minimum of 90 credit hours of course work applicable to the B.S. of Mechanical Engineering degree with a cumulative GPA of 3.50 or higher must be completed before beginning the joint degree program.
   14. Student has to choose the thesis option.

Plan Requirements

See Subplan Requirements below.
Subplan 1 Requirements: Non-Thesis Track

Total Credits Required: 30

Course Requirements

- Required Courses - Credits: 9
- Select one of the following specializations and complete three courses:
  - Materials Engineering
    - ME 630 - Corrosion Engineering
    - ME 732 - Mechanical Metallurgy
    - ME 734 - Fracture of Engineering Materials
    - ME 741 - Energy and Variational Methods in Applied Mechanics I
  - Nuclear Engineering
    - ME 655 - Fundamentals of Nuclear Engineering
    - ME 706 - Convective Heat Transfer
    - ME 754 - Introduction to Nuclear Criticality Safety
    - ME 755 - Nuclear Criticality Safety Engineering
    - ME 756 - Monte Carlo Methods in Nuclear Engineering
    - ME 760 - Waste Management And The Nuclear Fuel Cycle
    - ME 762 - Nuclear Power Engineering
    - ME 763 - Nuclear Reactor Analysis
    - PHYS 631 - Nuclear and Elementary Particle Physics
    - Or
    - RDCH 701 - Applied Nuclear Physics
- Electives - Credits: 18
- Complete 18 credits of elective coursework from within the College of Engineering. Courses from outside the College of Engineering may be taken with advisor approval.
  - Suggested Electives for Materials Engineering Track
    - ME 646 - Composite Materials
    - ME 650 - Physical Metallurgy
    - ME 670 - Experimental Mechanics of Materials
    - ME 742 - Energy and Variational Methods in Applied Mechanics II
  - Suggested Electives for Nuclear Engineering Track
    - ME 615 - Design of Thermal Systems
    - ME 702 - Computational Fluid Dynamics
    - ME 705 - Conduction Heat Transfer
    - ME 707 - Radiation Heat Transfer
    - ME 708 - Convective Boiling and Condensation
    - ME 711 - Advanced Thermodynamics
- Design Project - Credits: 3
  - ME 796 - Design Project in Mechanical Engineering

Degree Requirements

- Requires 30 credits of approved graduate courses. At least 18 credits must be earned from 700-level courses, and 15 credits must be in engineering.
- Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
• Only those courses in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.
• Each student's program should show suitable breadth and coherence. As specified in the Graduate Catalog, the program of study will be developed by the student and advisor and filed with the Graduate College. Prior to filing, the program must receive departmental approval. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

• The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
• Successfully complete a design project.

Subplan 2 Requirements: Thesis Track

Total Credits Required: 30

Course Requirements

• Required Courses - Credits: 9
• Select one of the following specializations and complete three courses:
  • Materials Engineering
    ▪ ME 630 - Corrosion Engineering
    ▪ ME 732 - Mechanical Metallurgy
    ▪ ME 734 - Fracture of Engineering Materials
    ▪ ME 741 - Energy and Variational Methods in Applied Mechanics I
  • Nuclear Engineering
    ▪ ME 655 - Fundamentals of Nuclear Engineering
    ▪ ME 706 - Convective Heat Transfer
    ▪ ME 754 - Introduction to Nuclear Criticality Safety
    ▪ ME 755 - Nuclear Criticality Safety Engineering
    ▪ ME 756 - Monte Carlo Methods in Nuclear Engineering
    ▪ ME 760 - Waste Management And The Nuclear Fuel Cycle
    ▪ ME 762 - Nuclear Power Engineering
    ▪ ME 763 - Nuclear Reactor Analysis
    ▪ PHYS 631 - Nuclear and Elementary Particle Physics
    ▪ Or
    ▪ RDCH 701 - Applied Nuclear Physics
• Electives - Credits: 15
• Complete 15 credits of elective coursework from within the College of Engineering. Courses from outside the College of Engineering may be taken with advisor approval.
  • Suggested Electives for Materials Engineering Track
    ▪ ME 646 - Composite Materials
    ▪ ME 650 - Physical Metallurgy
    ▪ ME 670 - Experimental Mechanics of Materials
    ▪ ME 742 - Energy and Variational Methods in Applied Mechanics II
  • Suggested Electives for Nuclear Engineering Track
    ▪ ME 615 - Design of Thermal Systems
    ▪ ME 702 - Computational Fluid Dynamics
    ▪ ME 705 - Conduction Heat Transfer
Degre Requirements

- Requires 24 credits of approved graduate courses plus six credits of work associated with the master's level thesis, for a total of 30 credits. At least 15 credits must be earned from 700-level courses, and at least 15 credits must be in engineering. The final examination will include a defense of thesis.
- Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
- Only those courses in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.
- In consultation with his/her advisor, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department,Â’s discretion. Please see Graduate College policy for committee appointment guidelines.
- Each student,Â’s program should show suitable breadth and coherence. As specified in the Graduate Catalog, the program of study will be developed by the student and advisor and filed with the Graduate College. Prior to filing, the program must receive approval by the student,Â’s committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

- ME 741 - Energy and Variational Methods in Applied Mechanics I

**Nuclear Engineering**
- ME 655 - Fundamentals of Nuclear Engineering
- ME 706 - Convective Heat Transfer
- ME 754 - Introduction to Nuclear Criticality Safety
- ME 755 - Nuclear Criticality Safety Engineering
- ME 756 - Monte Carlo Methods in Nuclear Engineering
- ME 760 - Waste Management And The Nuclear Fuel Cycle
- ME 762 - Nuclear Power Engineering
- ME 763 - Nuclear Reactor Analysis
- PHYS 631 - Nuclear and Elementary Particle Physics
- Or
- RDCH 701 - Applied Nuclear Physics

**Electives - Credits: 6-12**
- Complete 6-12 credits of elective coursework from within the College of Engineering. Courses from outside the College of Engineering may be taken with advisor approval.
- Suggested Electives for Materials Engineering Track
  - ME 615 - Design of Thermal Systems
  - ME 646 - Composite Materials
  - ME 650 - Physical Metallurgy
  - ME 670 - Experimental Mechanics of Materials
  - ME 742 - Energy and Variational Methods in Applied Mechanics II
- Suggested Electives for Nuclear Engineering Track
  - ME 615 - Design of Thermal Systems
  - ME 702 - Computational Fluid Dynamics
  - ME 705 - Conduction Heat Transfer
  - ME 707 - Radiation Heat Transfer
  - ME 708 - Convective Boiling and Condensation
  - ME 711 - Advanced Thermodynamics
- Thesis - Credits: 6
  - ME 796 - Design Project in Mechanical Engineering

### Degree Requirements

- **Total credits required** depends on the total number of approved graduate-level course work taken as technical electives (with a grade of B or better) during the senior year.
- **Requires 15-21 credits** of approved graduate courses plus six credits of work associated with the master’s level thesis, for a total of 21-27 credits. At least 15 credits must be earned from 700-level courses, and at least 15 credits must be in engineering. The final examination will include a defense of thesis.
- **Satisfactory progress** is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
- **Only those courses** in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.
- **In consultation with his/her advisor**, a student will organize a thesis committee of at least three departmental members. In addition, a fourth member from outside the department, known as the Graduate College Representative, must be appointed. An additional committee member may be added at the student and department's discretion. Please see Graduate College policy for committee appointment guidelines.
Each student's program should show suitable breadth and coherence. As specified in the Graduate Catalog, the program of study will be developed by the student and advisor and filed with the Graduate College. Prior to filing, the program must receive approval by the student, Advisor committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

**Graduation Requirements**

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her thesis by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy thesis to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

**Plan Graduation Requirements**

Refer to your subplan for Graduation Requirements.

- Subplan 1: Non-Thesis Track
- Subplan 2: Thesis Track
- Subplan 3: Integrated BS-MS Track

**Master of Science in Engineering - Mechanical Engineering**

The Master of Science degree is designed to give post baccalaureate students a broad understanding of the mechanical engineering field while providing some depth in a specific option area. Option areas include Dynamic Systems and Controls, Fluid and Thermal Sciences, Materials and Mechanics, Engineering Management, Mechanical and Environmental Systems, Nuclear Engineering, and Aerospace Engineering. Applicants who choose the M.S.E. program usually have an interest in more than one aspect of Mechanical Engineering. They are interested in gaining research and/or design experience to become better prepared for the workforce or further graduate study. Graduates from the program have gone to work in a broad range of industries including automotive, aerospace, nuclear, energy, oil, entertainment, HVAC, defense, utilities, and manufacturing. Graduates have also enrolled in some of the top Ph.D. programs in the country.

**Learning Outcomes**

[www.unlv.edu/degree/mse-mechanical-engineering](http://www.unlv.edu/degree/mse-mechanical-engineering)

**Plan Admission Requirement**

In addition to the general requirements for admission to the Graduate College, an applicant for the M.S. program must complete the following requirements:

1. Applicants must complete the on-line process in the "Apply Yourself (AY)" system.
2. In addition to the required information in the general AY application system, the Mechanical Engineering Department has two additional requirements which can also be submitted in the AY system as optional
items. Electronic submission is the preferred method. If these items are not completed in the AY system before you finish and make payment, you cannot go back and do them electronically afterwards. In this case, you must mail hardcopies to the Mechanical Engineering Department. The two items are:

3. A written statement of purpose indicating interests and objectives in working toward a M.S. degree.
4. Two letters of recommendation. There is no specified format. Your references should point out the qualifications that make you a good candidate for admission.

5. The applicant must have a bachelor’s degree in engineering or a closely related discipline. Students with non-engineering backgrounds will be required to complete a set of course work requirements that will assure successful completion of the M.S. specialization and qualify the student to sit for the Fundamentals of Engineering (FE) exam. The Graduate Program Committee (GPC) will decide upon special cases.

6. The applicant must submit his/her official copy of the Graduate Record Examination (GRE) test scores. To be admitted to the graduate program in Mechanical Engineering, the applicant must be at or above the 75 percentile range (of the group taking the GRE when the applicant takes the exam) in the quantitative reasoning section of the exam. If the applicant is less than 75 percent, at the discretion of the Department of Mechanical Engineering, the applicant may be provisionally admitted to the graduate program with the requirement that he/she retake the GRE during the first semester after admission. If the applicant fails to retake the GRE during the first semester after admission or if the applicant fails to be at or above the 75 percent range in the quantitative reasoning section of the exam after retaking the exam, at its discretion, the Department of Mechanical Engineering may remove the applicant from the graduate program. The GRE university code for UNLV is 4861. The Mechanical Engineering Department code is 1502.

7. The GPC will examine the applicant’s academic record and will make the final determination of the applicant’s admissibility to the M.S. program. In general, a minimum post baccalaureate GPA of 3.00 on a 4.00 scale or equivalent is required for admission in addition to a GPA of 3.00 on a 4.00 scale or equivalent in all engineering courses.

8. All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Our department admissions committee looks at all of these requirements when making admissions decisions.

The Integrated BS-MS degree program is designed to provide high-achieving MEG undergraduate students with the opportunity to be exposed to graduate courses and to encourage them to continue with graduate degree by reducing the time needed for degree completion. Up to nine credit hours of approved graduate-level course work can be taken as technical electives for the grade of B or better during the senior year and those credit hours will be waived for the graduate degree. The following conditions are needed to enroll in the Integrated BS-MS program:

1. A minimum of two semesters of full-time enrollment in B.S. of Mechanical Engineering program is required.
2. Applications are normally submitted with two semesters remaining in the senior year.
3. A minimum of 90 credit hours of course work applicable to the B.S. of Mechanical Engineering degree with a cumulative GPA of 3.50 or higher must be completed before beginning the joint degree program.
4. Student has to choose the thesis option.

Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Non-Thesis Track

Total Credits Required: 30

Course Requirements
- Required Courses, 9 Credits: 
- Select one of the following specializations and complete three courses:
  - Dynamic Systems and Controls
    - ME 625 - Robotics
    - ME 629 - Computer Control of Machines and Processes
    - ME 653 - Mechanical Vibrations
    - ME 725 - Vibrations I
    - ME 726 - Vibrations II
    - ME 729 - Advanced Robotics
    - ME 740 - Advanced Dynamics
    - ME 741 - Energy and Variational Methods in Applied Mechanics I
    - ME 746 - Experimental Design and Analysis of Digital Process Control Systems
  - Fluid/Thermosciences
    - ME 700 - Advanced Fluid Mechanics I
    - ME 701 - Advanced Fluid Mechanics II
    - ME 702 - Computational Fluid Dynamics
    - ME 703 - Continuum Mechanics
    - ME 704 - Finite Element Applications in Mechanical Engineering
    - ME 705 - Conduction Heat Transfer
    - ME 706 - Convective Heat Transfer
    - ME 707 - Radiation Heat Transfer
    - ME 708 - Convective Boiling and Condensation
    - ME 710 - Transport Phenomena in Bioengineering
    - ME 711 - Advanced Thermodynamics
    - ME 714 - Computational Aspects of Solar Energy
    - ME 717 - Transport Phenomena
  - Materials and Mechanics
    - ME 641 - Advanced Mechanical Engineering Design
    - ME 643 - Design Techniques in Mechanical Engineering
    - ME 646 - Composite Materials
    - ME 732 - Mechanical Metallurgy
    - ME 734 - Fracture of Engineering Materials
    - ME 741 - Energy and Variational Methods in Applied Mechanics I
    - ME 742 - Energy and Variational Methods in Applied Mechanics II
    - ME 743 - Applied Dynamic Finite Element Analysis
  - Engineering Management
    - CEE 609 - Engineering Project Management
    - MBA 763 - Leadership, Teams, and Individuals
    - MBA 769 - Applied Economic Analysis
    - MBA 767 - Market Opportunity Analysis
    - MBA 771 - Law and Ethics
    - MBA 775 - Data Modeling and Analysis
    - ME 626 - Manufacturing Processes
    - ME 701 - Advanced Fluid Mechanics II
    - ME 727 - Engineering Optimization
  - Mechanical and Environmental Systems
    - ME 618 - Air Conditioning Engineering Systems
    - ME 634 - Noise Control
    - ME 653 - Mechanical Vibrations
    - ME 700 - Advanced Fluid Mechanics I
    - ME 706 - Convective Heat Transfer
    - ME 720 - Acoustics I
    - ME 721 - Acoustics II
    - ME 725 - Vibrations I
    - ME 726 - Vibrations II
  - Nuclear Engineering
- ME 630 - Corrosion Engineering
- ME 655 - Fundamentals of Nuclear Engineering
- ME 656 - Radioactive Waste Management
- ME 705 - Conduction Heat Transfer
- ME 706 - Convective Heat Transfer
- ME 707 - Radiation Heat Transfer
- ME 708 - Convective Boiling and Condensation

- Aerospace
  - ME 700 - Advanced Fluid Mechanics I
  - ME 701 - Advanced Fluid Mechanics II
  - ME 702 - Computational Fluid Dynamics
  - ME 705 - Conduction Heat Transfer
  - ME 706 - Convective Heat Transfer
  - ME 740 - Advanced Dynamics
  - ME 741 - Energy and Variational Methods in Applied Mechanics I

- Electives, Ai Credits: 18
- Complete 18 credits of elective coursework from within the College of Engineering. Courses from outside the College of Engineering may be taken with advisor approval.
- Design Project, Ai Credits: 3
- ME 796 - Design Project in Mechanical Engineering

**Degree Requirements**

- Requires 33 credits of approved graduate courses. At least 18 credits must be earned from 700-level courses, and 15 credits must be in engineering.
- Satisfactory progress is defined as filing an approved program before the completion of nine credits of course work, completion of at least six credits of the approved program per calendar year, maintenance of a GPA of 3.00 (4.00 scale), no grades below C, (C- is not acceptable) and compliance with the letter and spirit of the Graduate Catalog and published policies of the Howard R. Hughes College of Engineering. If progress is not satisfactory, probation and separation may result, in accordance with the rules of the Graduate College. Any student whose GPA falls below 3.00 will be placed on probation and will have one semester to raise it to 3.00 or above.
- Only those courses in which a student received a grade of C or better may be used for graduate credit. Students must comply with Graduate College policy.
- Each student, Ai’s program should show suitable breadth and coherence. As specified in the Graduate Catalog, the program of study will be developed by the student and advisor and filed with the Graduate College. Prior to filing, the program must receive approval by the student, Ai’s committee. An approved program must be filed before the completion of nine credits of course work after admission (regular or provisional). The responsibility rests with the student. Students will be dropped from the graduate engineering program if they neglect this requirement.

**Graduation Requirements**

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- Successfully complete a design project.

**Subplan 2 Requirements: Thesis Track**

Total Credits Required: 30
Course Requirements

- **Required Courses**
  - Credits: 9

- **Select one of the following specializations and complete three courses:**
  - **Dynamic Systems and Controls**
    - ME 625 - Robotics
    - ME 629 - Computer Control of Machines and Processes
    - ME 653 - Mechanical Vibrations
    - ME 725 - Vibrations I

• Subplan 2: Thesis Track
• Subplan 3: Integrated BS-MS Track

Doctor of Philosophy - Mechanical Engineering

The Department of Mechanical Engineering offers a program leading to the Ph.D. degree in Engineering in the field of Mechanical Engineering. The program also offers the Ph.D. degree with major in the field of Nuclear Engineering.

Learning Outcomes

www.unlv.edu/degree/phd-mechanical-engineering

Plan Admission Requirement

Application for the Ph.D. program can be completed by one of two mechanisms. The Post-Master, Āôs Track requires the student to complete an M.S. degree in Engineering or equivalent with a major in mechanical engineering or closely related fields (nuclear engineering or health physics for the Nuclear concentration track). The Post-Bachelor, Āôs Track allows those undergraduates with outstanding undergraduate backgrounds to enter the Ph.D. program without having to complete an M.S. degree. The degree requirements for both options are the same beyond the B.S. degree excluding the completion of a master, Āôs thesis.

In order to be admitted to the Ph.D. program in Engineering in the field of Mechanical Engineering, a student must complete the following requirements:

1. Applicants must complete the on-line process in the ŒApply Yourself (AY)Œ system.
2. In addition to the required information in the general AY application system, the Department of Mechanical Engineering has two additional requirements which can also be submitted in the AY system as optional items. Electronic submission is a preferred method. If these items are not completed in the AY
system before you finish and make payment, you cannot go back and do them electronically afterwards. In this case, you must mail hard copies to the Department of Mechanical Engineering. The two requirements are:

3. Submit a written statement of purpose indicating interests and objectives in working toward a Ph.D. degree. This is a 1-2 page essay describing the applicant's reasons for considering graduate study, goals after completion of the graduate degree, and the applicant's specific areas of interest.

4. Submit three letters of recommendation using the online recommendation system. There is no specified format. Each letter should detail the potential of the applicant for advanced graduate work in Mechanical Engineering.

5. Candidates can be admitted on a regular or provisional status. Qualified applicants who are not admitted can take graduate courses as a non-degree seeking student but only 15 credits can be counted toward the degree program.

6. The applicant must submit his/her official copy of the Graduate Record Examination (GRE) test scores. To be admitted to the graduate program in Mechanical Engineering, the applicant must be at or above the 75 percentile range (of the group taking the GRE when the applicant takes the exam) in the quantitative reasoning section of the exam. If the applicant is less than 75 percent, at the discretion of the Department of Mechanical Engineering, the applicant may be provisionally admitted to the graduate program with the requirement that he/she retake the GRE during the first semester after admission. If the applicant fails to retake the GRE during the first semester after admission or if the applicant fails to be at or above the 75 percent range in the quantitative reasoning section of the exam after retaking the exam, at its discretion, the Department of Mechanical Engineering may remove the applicant from the graduate program. The GRE university code for UNLV is 4861. The Mechanical Engineering Department code is 1502.

7. All domestic and international applicants must review and follow the Graduate College Admission and Registration Requirements.

Post-Master's Track

- The applicant must have a Master of Science in Engineering degree or equivalent with a major in mechanical engineering or a closely allied field. Students with non-engineering backgrounds will be required to complete a set of course work requirements that will assure successful completion of the Ph.D. specialization and qualify the student to sit for the Fundamentals of Engineering (FE) exam. The Graduate Program Committee (GPC) will decide upon special cases.
- A minimum post-baccalaureate GPA of 3.30 (on a 4.00 scale) is required for graduates from accredited U.S. institutions. The Graduate College is responsible for international GPA interpretation.

Post-Bachelor's Track

- The applicant must have a bachelor's degree in engineering or a closely related discipline. Students with non-engineering backgrounds will be required to complete a set of course work requirements that will assure successful completion of the Ph.D. specialization and qualify the student to sit for the Fundamentals of Engineering (FE) exam. The department Graduate Program Committee (GPC) will decide upon special cases.
- A minimum GPA of 3.50 (on a 4.00 scale) is required for graduates from accredited U.S. institutions. The Graduate College is responsible for international GPA interpretation.

Plan Requirements

See Subplan Requirements below.

Subplan 1 Requirements: Post-Master's Track

Total Credits Required: 39
Course Requirements

- Required Courses, Credits: 21
- Complete 21 credits of 600- or 700-level coursework from within the College of Engineering. Courses from outside the College of Engineering may be taken with advisor approval.
- Students in the Nuclear Engineering concentration must take at least three of the following courses as part of their 21 credits of coursework:
  - ME 655 - Fundamentals of Nuclear Engineering
  - ME 700 - Advanced Fluid Mechanics I
  - ME 701 - Advanced Fluid Mechanics II
  - ME 702 - Computational Fluid Dynamics
  - ME 705 - Conduction Heat Transfer
  - ME 706 - Convective Heat Transfer
  - ME 707 - Radiation Heat Transfer
  - ME 708 - Convective Boiling and Condensation
  - ME 711 - Advanced Thermodynamics
  - ME 754 - Introduction to Nuclear Criticality Safety
  - ME 755 - Nuclear Criticality Safety Engineering
  - ME 756 - Monte Carlo Methods in Nuclear Engineering
  - ME 760 - Waste Management And The Nuclear Fuel Cycle
  - ME 762 - Nuclear Power Engineering
  - ME 763 - Nuclear Reactor Analysis
  - HPS 602 - Radiation Detection
  - HPS 603 - Radiation Physics and Instrumentation Laboratory
  - HPS 701 - Applied Nuclear Physics
  - HPS 703 - Radiation Interactions and Transport
  - HPS 720 - Radiation Dosimetry
  - HPS 730 - Advanced Radiation Biology
  - HPS 719 - Introduction to Radioanalytical Chemistry

- Dissertation, Credits: 18
- 799 - Dissertation

Degree Requirements

- Complete a minimum of 21 credit hours of course work beyond the degree of Master of Science in Engineering (M.S.) or equivalent with an overall minimum GPA of 3.20 and a minimum GPA of 2.70 (B-) in each class. Ph.D. candidates who do not maintain this GPA requirement will be placed on probation.
- Out of the 21 credit hours of course work a minimum of 18 of these credits must be 700-level courses, and no more than 6 credits can be from ME 791 Graduate Independent Study. In addition to these course requirements, a minimum of 18 credits of Dissertation is required.
- The student's Doctoral Advisory Committee may add other requirements in accordance with the individual's background and area of study. No more than 15 non-matriculated credits including transfer credits are allowed.
- A Doctoral Advisory Committee composed of at least five members of the UNLV graduate faculty is to be formed for the student. Three of these faculty members must be from the Department of Mechanical Engineering, the fourth from a relevant supporting field, and a fifth as appointed by the Graduate College.
- The program of study must be submitted by the second semester of study. The program of study is to be prepared by the student and his/her doctoral advisor, and must be approved by the student, the Doctoral Advisory Committee and the GPC.
- In order to show breadth and depth of knowledge in his/her discipline, the doctoral student must pass either a written qualifying exam, or an oral qualifying exam, or both as determined by the student,
Advisory Committee. Each student must choose one of the following areas as a major and another as a minor:

- Dynamics and Control
- Fluid Mechanics
- Material Science
- Solid Mechanics and Mechanical Design
- Thermal Sciences
- Nuclear Engineering

- In addition, all students will be tested in Mathematics. These examinations are on the undergraduate senior level, and are prepared by the department. Qualifying exams are held every semester. The qualifying exams must be scheduled during the first year of study. The qualifying exam can be taken a maximum of two times. Failure to take the exam within the first year or failure to pass the exam in the second attempt will automatically result in terminating student from the program.

- After successfully completing all required course work and passing the Qualifying Exam, students must pass a preliminary exam with a written proposal for the dissertation research, followed by an oral defense of the proposal before the Doctoral Advisory Committee. The Preliminary Exam cannot be taken more than once per semester but may be repeated until passed. The student is advanced to candidacy for the Ph.D. upon completion of all course work and this Preliminary Exam.

Plan Graduation Requirements

See Plan Graduation Requirements below.

Subplan 2 Requirements: Post-Bachelor's Track

Total Credits Required: 63

Course Requirements

- Required Courses, Additional Credits: 21
- Complete 45 credits of 600- or 700-level coursework from within the College of Engineering. Courses from outside the College of Engineering may be taken with advisor approval.
- Students in the Nuclear Engineering concentration must take at least three of the following courses as part of their 45 credits of coursework:
  - ME 655 - Fundamentals of Nuclear Engineering
  - ME 700 - Advanced Fluid Mechanics I
  - ME 701 - Advanced Fluid Mechanics II
  - ME 702 - Computational Fluid Dynamics
  - ME 705 - Conduction Heat Transfer
  - ME 706 - Convective Heat Transfer
  - ME 707 - Radiation Heat Transfer
  - ME 708 - Convective Boiling and Condensation
  - ME 711 - Advanced Thermodynamics
  - ME 754 - Introduction to Nuclear Criticality Safety
  - ME 755 - Nuclear Criticality Safety Engineering
  - ME 756 - Monte Carlo Methods in Nuclear Engineering
  - ME 760 - Waste Management And The Nuclear Fuel Cycle
  - ME 762 - Nuclear Power Engineering
  - ME 763 - Nuclear Reactor Analysis
  - HPS 602 - Radiation Detection
  - HPS 603 - Radiation Physics and Instrumentation Laboratory
  - HPS 701 - Applied Nuclear Physics
Degree Requirements

- Complete a minimum of 45 credit hours of course work beyond the degree of Bachelor of Science in Engineering (B.S.) or equivalent with an overall minimum GPA of 3.20 and a minimum GPA of 2.70 (B-) in each class. Ph.D. candidates who do not maintain this GPA requirement will be placed on probation. Students on academic probation may be transferred to the M.S.M.E. Program depending on the student’s academic record.
- Out of the 45 credit hours of course work, a minimum of 33 credits must be in 700-level courses, and no more than 6 credits can be from ME 791 Graduate Independent Study. In addition to these course requirements, a minimum of 18 credits of Dissertation is required.
- The student’s doctoral advisory committee may add more requirements in accordance with the individual’s background and field of study. No more than 15 non-matriculated credits including transfer credits is allowed.
- A Doctoral Advisory Committee composed of at least five members of the UNLV graduate faculty is to be formed for the student. Three of these faculty members must be from the Department of Mechanical Engineering, the fourth from a relevant supporting field, and a fifth as appointed by the Graduate College.
- The program of study must be submitted by the second semester of study. The program of study is to be prepared by the student and his/her doctoral advisor, and must be approved by the student, the doctoral advisory committee, and the GPC.
- In order to show breadth and depth of knowledge in his/her discipline, the doctoral student must pass either a written qualifying exam, or an oral qualifying exam, or both as determined by the student’s Doctoral Advisory Committee. Each student must choose one of the following areas as a major and another as a minor:
  - Dynamics and Control
  - Fluid Mechanics
  - Material Science
  - Solid Mechanics and Mechanical Design
  - Thermal Sciences
  - Nuclear Engineering
- In addition, all students will be tested in Mathematics. These examinations are on the undergraduate senior level, and are prepared by the department. Qualifying exams are held every semester. The qualifying exams must be scheduled during the first year of study. The qualifying exam can be taken a maximum of two times. Failure to take the exam within the first year or failure to pass the exam in the second attempt will automatically result in terminating student from the program.
- After successfully completing all required course work and passing the Qualifying Exam, students must pass a preliminary exam with a written proposal for the dissertation research, followed by an oral defense of the proposal before the Doctoral Advisory Committee. The Preliminary Exam cannot be taken more than once per semester but may be repeated until passed. The student is advanced to candidacy for the Ph.D. upon completion of all course work and the Preliminary Exam.

Graduation Requirements

See Plan Graduation Requirements below.
Plan Graduation Requirements

- The student must submit all required forms to the Graduate College and then apply for graduation up to two semesters prior to completing his/her degree requirements.
- The student must submit and successfully defend his/her dissertation by the posted deadline. The defense must be advertised and is open to the public.
- The student must submit his/her approved, properly formatted hard-copy dissertation to the Graduate College, and submit the approved electronic version to ProQuest by the posted deadline.

Mechanical Engineering Courses

ME 600 - Intermediate Fluid Mechanics
This advanced undergraduate course is available for graduate credit.

ME 602 - Computational Methods for Engineers
This advanced undergraduate course is available for graduate credit.

ME 609 – Turbomachinery
Credits 3
Types of turbomachines, applications of turbomachines, and performance characteristics. Energy transfer in turbomachines. Fundamentals of turbomachinery. Applications of the principles of fluid mechanics, thermodynamics and aerodynamics to the design and analysis of pumps, fans, blowers, compressors, gas turbines, steam turbines, hydraulic turbines, and wind turbines are incorporated. **Prerequisites:** ME 311 and ME 380, or equivalent.

ME 611 - Engineering Thermodynamics II
This advanced undergraduate course is available for graduate credit.

ME 615 - Design of Thermal Systems
This advanced undergraduate course is available for graduate credit.

ME 616 - Introduction to Biomechanical Engineering
This advanced undergraduate course is available for graduate credit.

ME 617 - Introduction to Fuel Cell
Credits 3

ME 618 - Air Conditioning Engineering Systems
This advanced undergraduate course is available for graduate credit.

ME 619 - Advanced HVAC and Energy Conservation Systems
This advanced undergraduate course is available for graduate credit.

ME 625 - Robotics
This advanced undergraduate course is available for graduate credit.

ME 626 - Manufacturing Processes
This advanced undergraduate course is available for graduate credit.
ME 627 - Manufacturing Systems
This advanced undergraduate course is available for graduate credit.

ME 629 - Computer Control of Machines and Processes
This advanced undergraduate course is available for graduate credit.

ME 630 - Corrosion Engineering
This advanced undergraduate course is available for graduate credit.

ME 634 - Noise Control
This advanced undergraduate course is available for graduate credit.

ME 641 - Advanced Mechanical Engineering Design
This advanced undergraduate course is available for graduate credit.

ME 642 - Advanced Mechanism Design
This advanced undergraduate course is available for graduate credit.

ME 643 - Design Techniques in Mechanical Engineering
This advanced undergraduate course is available for graduate credit.

ME 646 - Composite Materials
This advanced undergraduate course is available for graduate credit.

ME 650 - Physical Metallurgy
This advanced undergraduate course is available for graduate credit.

ME 650L - Physical Metallurgy Laboratory
This advanced undergraduate course is available for graduate credit.

ME 653 - Mechanical Vibrations
This advanced undergraduate course is available for graduate credit.

ME 655 - Fundamentals of Nuclear Engineering
This advanced undergraduate course is available for graduate credit.

ME 656 - Radioactive Waste Management
This advanced undergraduate course is available for graduate credit.

ME 660 - High School Mentoring for Engineering Design
Credits 3
Students help high school teams design robots for the FIRST robotics competition. Weekly meetings discuss: mentoring, design, robotics, organizational skills, and teamwork. Must arrange transport to assigned local high school. Class begins with the international FIRST kick-off meeting usually scheduled for the first Saturday after New Year’s Day. Prerequisites: Instructor Consent

ME 662 - Vehicle Design Projects
Credits 3
Students design and build a vehicle for entry into a national or regional collegiate competition such as Mini-Baja or Human Powered Vehicle. Design topics may include structural analysis, composite materials, aerodynamics, engine performance, occupant safety, drive train, suspension systems, project management, team building, technical report writing, and oral presentations. Prerequisites: Instructor Consent

ME 670 - Experimental Mechanics of Materials
This advanced undergraduate course is available for graduate credit.
ME 677 - Solar and Renewable Energy Utilization  
Credits 3  
Introduction to renewable energy applications. Includes environmental motivations, historical perspectives, solar photovoltaic and thermal applications, implications in building designs, wind energy, biomass, alternative fuels, geothermal power utilization, utility considerations, and political and economic factors. Formerly: EGG 650

ME 680 - Gas Dynamics I  
This advanced undergraduate course is available for graduate credit.

ME 682 - Aerodynamics  
This advanced undergraduate course is available for graduate credit.

ME 695 - Special Topics in Engineering  
This advanced undergraduate course is available for graduate credit.

ME 700 - Advanced Fluid Mechanics I  
Credits 3  
Covers area of viscous laminar fluid flow. Presents concept of shear stresses and develops Navier-Stokes equation. Applications such as boundary layer flow studied as are some solutions of viscous fluid flow. Prerequisites: Graduate Standing or Instructor Consent

ME 701 - Advanced Fluid Mechanics II  
Credits 3  
Potential flow theory with emphasis on complex representations, conformal mapping, Schwarz Christoffel transformations, airfoils. Compressible flow, free shear layers, shock waves, compressible boundary layers, two- and three- dimensional supersonic flows. Prerequisites: ME 700 or consent of instructor.

ME 702 - Computational Fluid Dynamics  
Credits 3  
Application of numerical methods to solve highly nonlinear equations of motion and energy associated with fluid dynamics. Among other methods, finite difference and finite element methods discussed along with use of commercial software packages. Prerequisites: Graduate Standing or Instructor Consent

ME 703 - Continuum Mechanics  
Credits 3  
Matrices and tensors, stress deformation and flow, compatibility conditions, constitutive equations, field equations and boundary conditions in fluids and solids, applications in solid and fluid mechanics. Formerly: (CEG 711). Prerequisites: Graduate Standing or Instructor Consent

ME 704 - Finite Element Applications in Mechanical Engineering  
Credits 3  
Finite Element Method used historically for structurally related problems. Advances in application and development of Finite Element Method particularly useful in fluid flow and heat transfer related problems. PC, workstation, and mainframe finite element computer codes used to assist students in solving fluid and heat transfer problems. Prerequisites: Graduate Standing or Instructor Consent

ME 705 - Conduction Heat Transfer  
Credits 3  
Designed to solve more advanced heat transfer problems by conduction. Analytical and numerical techniques in heat conduction covered. Review of elementary problems presented. Advanced analytical methods using Bessel functions, separation of variables and Laplace transforms, among others. Solutions using finite differences covered. Prerequisites: ME 314 and ME 445 or equivalent or consent of instructor.

ME 706 - Convective Heat Transfer  
Credits 3
Conservation principles, fluid stresses and flux laws, boundary layer equation, laminar and turbulent heat flow inside tubes. Heat transfer in laminar and turbulent boundary layers. Influence of temperature dependent fluid properties and free-convection boundary layers. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 707 - Radiation Heat Transfer**
Credits 3
Advanced engineering analysis of thermal radiation heat transfer. Spectral and gray-body analysis. Exchange of radiation between surfaces and through absorbing, emitting, and scattering media. Radiation combined with conduction and convection. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 708 - Convective Boiling and Condensation**
Credits 3
Basic models, empirical treatments of two-phase flow. Introduction to convective boiling, subcooled boiling, void fraction and pressure drop in subcooled boiling, saturated boiling heat transfer, critical heat flux, condensation. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 710 - Transport Phenomena in Bioengineering**
Credits 3
Transport phenomena in bioengineering at molecular, cellular and tissue levels. Topics include blood flow in large and small vessels, gas exchange in lung, biomass and heat transfer in microcirculation, ion transport across cell membrane, cell migration, renal transport, controlled drug delivery and transport in tumors. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 711 - Advanced Thermodynamics**
Credits 3
Advanced concepts and laws of classical equilibrium thermodynamics as applied to engineering problems. Introduction to statistical thermodynamics. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 714 - Computational Aspects of Solar Energy**
Credits 3
Theory and practice in the design of solar energy components and systems. Included are collectors, concentrators, receivers, storage, and power systems. Emphasis is on the simulation of transient systems. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 717 - Transport Phenomena**
Credits 3
Momentum, energy, and mass transport at molecular motion, microscopic levels. Momentum flux tensors, heat flux vectors, and mass flux vectors. Transport in laminar or turbulent flow. Transport in isothermal or nonisothermal systems. Transport in single or multicomponent systems. Interface transport and chemical reaction. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 720 - Acoustics I**
Credits 3
Introduction to wave motion and general solution techniques associated with wave equation; propagation of waves in solid media; one-dimensional acoustic waves, acoustic transmission phenomena, and propagation of sound outdoors. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 721 - Acoustics II**
Credits 3
Three-dimensional sound waves; experimental measurement techniques associated with acoustics; acoustic filter theory; other advanced topics in acoustics. **Prerequisites:** ME 720

**ME 725 - Vibrations I**
Credits 3
Vibrations of systems with one-degree-of-freedom and more than one-degree-of-freedom. Methods for finding natural frequencies, discrete systems and continuous systems. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 726 - Vibrations II**  
**Credits 3**  
Virtual work, Hamilton’s principles, Lagrange’s equation, influence coefficients, Green’s function as applied to advanced vibration problems; vibration of continuous systems; modal analysis. **Prerequisites:** Graduate standing and ME 725.

**ME 727 - Engineering Optimization**  
**Credits 3**  
Introduction to optimization, univariate functions, multivariate functions, constrained optimality criteria, penalty method, constrained direct search, engineering case studies, linear programming. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 729 - Advanced Robotics**  
**Credits 3**  
In-depth study of advanced automation concepts and robotic manipulators. Topics including 3-D kinematics, trajectory generation, compliance analysis, dynamic control of robotics along with concept of assembly operations and machine vision. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 732 - Mechanical Metallurgy**  
**Credits 3**  
Behavior and response of metals to applied forces. Five areas covered: mechanical fundamentals, metallurgical fundamentals, materials testing, plastic forming of metals, and modes of failure. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 734 - Fracture of Engineering Materials**  
**Credits 3**  
Stress-strain relationships during elastic and plastic deformation, linear elastic and elastic-plastic fracture mechanics, Griffith’s theory, stress analyses of cracks, plastic zone size, fracture toughness measurements, ductile-to-brittle transition, fatigue failure mechanisms, environment-assisted cracking and relevant test methods, metallographic evaluations using state-of-the-art techniques. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 736 - Diffusion in Metals**  
**Credits 3**  
Covers thermodynamics and phase diagrams, interstitial and substitutional diffusion, diffusion in binary and ternary alloys, solidification, and diffusional and diffusionless transformation in solids. **Prerequisites:** ME 301 and 302 or equivalent.

**ME 740 - Advanced Dynamics**  
**Credits 3**  
Applications of Lagrangian and Newtonian mechanics to mechanical systems. Includes kinematics, moving reference frames, rigid body dynamics, oscillations and mode forms, and gyroscopic effects. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 741 - Energy and Variational Methods in Applied Mechanics I**  
**Credits 3**  
Governing equations of mechanics, energy and variational principles, variational methods of approximation, theory of elasticity, material laws, work and energy, beam theory, finite element method, structural systems. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 742 - Energy and Variational Methods in Applied Mechanics II**  
**Credits 3**
Theoretical principles for solving solid mechanics problems. Direct continuation of ME 741. Topics covered include: computational solution methods to governing equations, free vibration and forced response of elastic systems, stability analysis, solution methods to governing equations, free vibration and forced response of elastic systems, stability analysis, solution methods for beams, plates, and structural systems. **Prerequisites:** ME 741

**ME 743 - Applied Dynamic Finite Element Analysis**  
**Credits 3**  
Overview of the development of dynamic computational analysis, software description, modeling techniques, symmetry and boundary conditions, initial conditions, contact algorithms, wave propagation, material behavior, implicit analysis, damping, mass scaling, mesh adaptation, element selection, hourglossing, postprocessing, output control, restarts, parallel processing, Eulerian and ALE methods. **Prerequisites:** Graduate standing in engineering or consent of instructor.

**ME 746 - Experimental Design and Analysis of Digital Process Control Systems**  
**Credits 3**  
Applications, design, and experimental practice of mechanical linear and discrete systems: hydraulic, pneumatic, elastic multibody systems, centripetal and coriolis effects, automatic model and code generation. Discrete nonlinear control systems modeling, simulation, design using state space methods. Aspects of system identification, robust and optimal control. **Same as:** (EGG 746). **Prerequisites:** Graduate Standing or Instructor Consent

**ME 747 - Orthopedic Biomechanics - Lower Extremities and Spine**  
**Credits 3**  
Biomechanics of the lower extremities and spine; engineering properties and physiology of bone, cartilage, and tendon; analysis of gait; effects of orthopedic impairment and injury; design and surgical implantation of prosthetic joints and fracture fixation devices; engineering of tissue regeneration and replacement. **Same as:** (EGG 747). **Prerequisites:** Graduate standing in engineering or kinesiology or consent of instructor.

**ME 748 - Prosthetic Systems Engineering**  
**Credits 3**  
Engineering design of prosthetic feet, ankles, knees, and prehension devices; materials and manufacturing; the biomechanics of movement using a prosthesis; residual limb morphology and surgical enhancements; socket design and tissue response; myoelectric devices; microprocessor control; psychophysical and motor control considerations; aspects of clinical science. Emphasis on R&D needs. **Same as:** (EGG 748). **Prerequisites:** Graduate standing in engineering or kinesiology or consent of instructor.

**ME 750 - Analysis of Human Movement**  
**Credits 3**  
Analysis of the kinematics and kinetics of human movement in two and three dimensions with emphasis on methods used in motion capture, including joint and segment position; acceleration, velocity, force and torque; work and power; and inverse solution methods. **Same as:** (EGG 750). **Prerequisites:** Graduate standing in engineering or kinesiology or consent of instructor.

**ME 752 - Advanced Air Pollution Control**  
**Credits 3**  
Fundamental chemical and physical principles of generation and control of air pollutants, and applications to pollution control equipment. Pollutant and particle formation during combustion. Gas adsorption and absorption fundamentals and tower/column design. Pollution control strategies. **Prerequisites:** Graduate Standing or Instructor Consent

**ME 754 - Introduction to Nuclear Criticality Safety**  
**Credits 3**  
Review of criticality accidents, overview of the physics of criticality, factors that affect reactivity, experiments and the development of subcritical limits, standards and regulations, hand calculation techniques, engineering and evaluations for criticality safe processes and facilities. **Prerequisites:** ME 455, ME 655 or equivalent or consent of instructor.
ME 755 - Nuclear Criticality Safety Engineering  
Credits 3  
Nuclear engineering for criticality safe processes and facilities: in-depth physics of criticality, hand calculation techniques, Monte Carlo applications, experimental development of subcritical limits; nuclear criticality accidents, anomalies and case studies; nuclear data/benchmarking, standards and regulations, etc. Practical engineering examples/case studies and the preparation of a nuclear criticality safety evaluation. Prerequisites: ME 754 or equivalent or consent of instructor.

ME 756 – Monte Carlo Methods in Nuclear Engineering  
Credits 3  
Theory and application of the Monte Carlo method for neutron transport calculations from introductory concepts to advanced simulations of criticality in fissile materials. Computer applications in nuclear engineering; verification and validation (V&V), nuclear data files, examples of Monte Carlo calculations, case studies and applied problems. Prerequisites: ME 455, ME 655 or equivalent or consent of instructor.

ME 757 - Radiation Monitoring and Safeguards Systems  
Credits 3  
Advanced topics in radiation measurement science, remote sensing, nondestructive assay techniques, and nuclear material safeguards. Use of radiation detection systems in process monitoring and safeguards, and in security applications. Prerequisites: ME 455/655, or consent of instructor.

ME 758 - Accelerator Applications in Nuclear Engineering  
Credits 3  
Fundamental concepts of particle accelerators. Radiation beams and targets. Advanced topics in accelerator applications in engineering, security, isotope production, transmutation, nondestructive assay, material analysis, biology and medicine. Prerequisites: ME 455/655, or consent of instructor.

ME 759 - Mass Transfer in Environmental Systems  
Credits 3  
Fundamentals of mass transfer by diffusion and advection. Solutions to steady-state and transient problems in several dimensions. Notes: Applications to natural and engineered systems. Prerequisites: Graduate Standing or Instructor Consent

ME 760 - Waste Management And The Nuclear Fuel Cycle  
Credits 3  
Introduction to the nuclear fuel cycle and management of nuclear waste. Introduction to repository design and performance assessment. Overview of waste form performance, contaminant transport, and risk assessment as applied to nuclear waste management. Prerequisites: HPS 701 or consent of instructor.

ME 762 - Nuclear Power Engineering  
Credits 3  
Analysis of the conversion of energy generated by fission, fusion, or radioactive decay into electrical power and propulsion. Theory of reactor heat generation and removal and new reactor concepts. Review of thermodynamic cycles used in pressurized and boiling water reactors, gas-cooled and liquid metal reactors. Prerequisites: ME 311, ME 314, ME 455 or ME 655 or equivalent

ME 763 - Nuclear Reactor Analysis  
Credits 3  
Development of the neutron diffusion equation with application to the design of steady state nuclear reactors. Derivation of critical core dimensions for single energy and multienergy neutron groups. Determination of group constants for thermal and fast neutrons. Unsteady reactor dynamics and criticality control. Introduction to Monte Carlo techniques. Prerequisites: ME 455 or ME 655

ME 765 - Neutron Detection and Production  
Credits 3  

Content includes passive and active neutron detection using He3 and BF3 ionization/proportional tubes, liquid and plastic scintillators, fission chambers, and activation foils. The course includes laboratory exercises. Pulsed and continuous sources will be covered including fission reactors, accelerator production through fusion, spallation, photonuclear effects, and [alpha, n] reactions. **Prerequisites**: ME 455/655 or equivalent.

**ME 774 - Introduction to Theory of Elasticity and Plasticity I**  
**Credits 3**  
Introduction to theoretical and applied elasticity and plasticity theory-solutions to engineering problems in structural mechanics and geotechnical engineering. Response of isotropic, orthotropic and layered media to applied stresses and strains. **Prerequisites**: Graduate Standing or Instructor Consent

**ME 777 - Application of High-Performance Computing Methods in Science and Engineering**  
**Credits 3**  
Application of high performance computing systems to science and engineering, models for numerically intensive problem solving, high performance numerical algorithms, FORTRAN 90 and high-performance FORTRAN. **Same as**: (MAT 777). **Prerequisites**: Knowledge of UNIX, FORTRAN, and previous course on numerical methods. Graduate standing.

**ME 791 - Independent Study in Mechanical Engineering**  
**Credits 1 – 3**  
Independent study of a selected mechanical engineering topic. **Notes**: May be repeated to a maximum of three credits. **Prerequisites**: Graduate standing in mechanical engineering and consent of instructor.

**ME 795 - Advanced Topics in Mechanical Engineering**  
**Credits 1 – 6**  
Outlet for experimental and other advanced topics which may be of current interest. **Notes**: Topics and credits to be announced. May have a laboratory. May be repeated to a maximum of six credits.

**ME 796 - Design Project in Mechanical Engineering**  
**Credits 1 – 3**  
Synthesis course involving students in the design process from analysis and proposal to solution. **Notes**: May be repeated to a maximum of three credits. **Prerequisites**: Graduate standing in mechanical engineering and consent of instructor.

**ME 797 - Thesis in Mechanical Engineering**  
**Credits 3 – 6**  
**Notes**: May be repeated but only six credits will be applied to the program. **Grading**: S/F grading only. **Prerequisites**: Graduate standing in mechanical engineering.

**ME 799 – Dissertation**  
**Credits 1 – 6**  
Research analysis and writing towards completion of dissertation and subsequent defense. **Notes**: May be repeated to a maximum of 18 credits allowed toward the degree. **Grading**: S/F grading only. **Prerequisites**: Graduate standing in Ph.D. program and consent of advisor.
